Guy Suits,2016-12-20 The Collected Works of Irving Langmuir Volume 4 Electrical Discharge is a 12 chapter text that covers the fundamental and theoretical aspects of electrical discharge with a particular emphasis on discharge in gases The opening chapters are concerned the negative probes as being due to the random positive ion current of the plasma and the proper space charge with a very simple discharge tube and some miscellaneous experiments on a simple tube in which streamer type discharges were observed as well as the effects of small amounts of tungsten in the argon discharge These topics are followed by discussions on the verification of the Langmuir Probe Theory the disturbing effects of mercury vapor blast from the cathode spot on the mercury pool and the phenomena observed in the low pressure discharges Other chapters explore the Faraday dark space of the glow discharge and how the electrons of a beam in a plasma are given their higher velocity components The final chapters introduce the concept of plasma oscillation This book will be of value to electronics engineers and technical workers

Elementary lessons in electricity & magnetism. Repr. and corrected Silvanus Phillips Thompson, 1887 From Animals to Animats 12 Tom Ziemke, Christian Balkenius, John Hallam, 2012-08-22 This book constitutes the proceedings of the 12th International Conference on Simulation of Adaptive Behaviour SAB 2012 held in Odense Denmark in August 2012 The 22 full papers as well as 22 poster papers included in this volume were carefully reviewed and selected from 66 submissions They are organized in topical sections named animat approach and methodology perception and motor control evolution learning and adaptation and collective and social behaviour

Physics of Intensity Dependent Beam Instabilities King-Yuen Ng, 2006 This book provides a comprehensive treatment of intensity dependent particle beam instabilities in accelerating rings Written for researchers the material is also suitable for use as a textbook in an advanced graduate course for students studying accelerator physics The presentation starts with a brief review of the basic concept of wake potentials and coupling impedances in the vacuum chamber followed by a discussion on static and dynamic solutions of their effects on the particle beams Special emphasis is placed separately on proton and electron machines Other special topics of interest covered include Landau damping Balakin OCoNovokhatsky OCoSmirnov damping Sacherer's integral equations Landau cavity saw tooth instability Robinson stability criteria beam loading transition crossing two stream instabilities and collective instability issues of isochronous rings After the formulation of an instability readers are provided a thorough description of one or more experimental observations together with a discussion of the cures for the instability Although the book is theory oriented the use of mathematics has been minimized The presentation is intended to be rigorous and self contained with nearly all the formulas and equations derived
