Congress and of All Departments of the Government of the United States for the Period from ... to ...* ,      *The Inventor of Stereo* Robert Alexander,2013-04-11 This book is the definitive study of the life and works of one of Britain s most important inventors who due to a cruel set of circumstances has all but been overlooked by history Alan Dower Blumlein led an extraordinary life in which his inventive output rate easily surpassed that of Edison but whose early death during the darkest days of World War Two led to a shroud of secrecy which has covered his life and achievements ever since His 1931 Patent for a Binaural Recording system was so revolutionary that most of his contemporaries regarded it at as more than 20 years ahead of its time Even years after his death the full magnitude of its detail had not been fully utilized Among his 128 Patents are the principle electronic circuits critical to the development of the world s first electronic television system During his short working life Blumlein produced patent after patent breaking entirely new ground in electronic and audio engineering During the Second World War Alan Blumlein was deeply engaged in the very secret work of radar development and contributed enormously to the system eventually to become H2S blind bombing radar Tragically during an experimental H2S flight in June 1942 the Halifax bomber in which Blumlein and several colleagues were flying crashed and all aboard were killed He was just days short of his 39th birthday For many years there have been rumours about a biography of Alan Blumlein yet none has been forthcoming This is the world s first study of a man whose achievements should rank among those of the greatest Britain has produced This book provides detailed knowledge of every one of his patents and the process behind them while giving an in depth study of the life and times of this quite extraordinary man      **List of Contributions from the Graduate School of Engineering** ,1939      *Bibliography on Watthour Meters* American Institute of Electrical Engineers. **The New Deal at the Grass Roots** D. Jerome Tweton,1988 In the first case study of its kind Tweton explores the New Deal in one Minnesota county how programs operated what impact they had on communities and people and how people responded The story he tells is based on oral history interviews township and village records files of government papers and county newspapers      **Electric Vehicles** Suzanne Appelt,1966      **The Norris Project** Tennessee Valley Authority,1940 This report is published for the purpose of giving to the engineering profession the important and useful facts about the planning and construction of the Norris Dam and Reservoir on the Clinch River in eastern Tennessee by the Tennessee Valley Authority an agency of the United States Government      **Electricity Before Nationalisation** Leslie Hannah,1979-06-17

**Powering American Farms** Richard F. Hirsh,2022-06-14 The untold story of the power industry s efforts to electrify growing numbers of farms in the years before the creation of Depression era government programs Even after decades of retelling the story of rural electrification in the United States remains dramatic and affecting As textbooks and popular

histories inform us farmers obtained electric service only because a compassionate federal government established the Tennessee Valley Authority and the Rural Electrification Administration REA during the Great Depression of the 1930s The agencies success in raising the standard of living for millions of Americans contrasted with the failure of the greedy big city utility companies which showed little interest in the apparently unprofitable nonurban market Traditional accounts often describe the nation s population as split in two separated by access to a magical form of energy just past cities limits a bleak preindustrial class of citizens endured literally in near darkness at night and envious of their urban cousins who enjoyed electrically operated lights refrigerators radios and labor saving appliances In *Powering American Farms* Richard F Hirsh challenges the notion that electric utilities neglected rural customers in the years before government intervention Drawing on previously unexamined resources Hirsh demonstrates that power firms quadrupled the number of farms obtaining electricity in the years between 1923 and 1933 for example Though not all corporate managers thought much of the farm business a cadre of rural electrification advocates established the knowledge base and social infrastructure upon which New Deal organizations later capitalized The book also suggests that the conventional storyline of rural electrification remains popular because it contains a colorful hero President Franklin D Roosevelt and villainous utility magnates such as Samuel Insull who make for an engaging but distorted narrative Hirsh describes the evolution of power company managers thinking in the 1920s and early 1930s from believing that rural electrification made no economic sense to realizing that serving farmers could mitigate industry wide problems This transformation occurred as agricultural engineers in land grant universities supported by utilities demonstrated productive electrical technologies that yielded healthy profits to farmers and companies alike Gaining confidence in the value of rural electrification private firms strung wires to more farms than did the REA until 1950 a fact conveniently omitted in conventional accounts *Powering American Farms* will interest academic and lay readers of New Deal history the history of technology and revisionist historiography
