Lhatoo, Philippe Kahane, Hans O. Lüders, 2018-11-15 No other neurological condition allows the same opportunities for an intracranial electrophysiological study of the human brain as epilepsy does Epileptic surgery is designed to remove the epileptic focus from the human brain thereby effecting either cure or substantial reduction of seizures in an individual with an otherwise intractable condition Its use as a treatment modality dates from the late 19th century and it has become a widely used treatment option throughout the world in the last 20 30 years The complexity of epilepsy cases in surgical centres and the need for invasive electrode studies for pre surgical evaluation are both greatly increasing Invasive Studies of the Human Epileptic Brain is the definitive reference text on the use of invasive electroencephalographic EEG diagnostic studies in human epilepsy Written by some of the most renowned epilepsy experts of the 20th and 21st centuries the authors provide their expertise and insights into the identification and mapping of intracranial epileptiform and non epileptiform activity mapping of the human brain function and approaches in the use of invasive electroencephalography in a variety of clinical situations The book is organized into an easily readable series of chapters and is brilliantly illustrated with case studies each providing an intuitively comprehensive approach to invasive brain studies      **Neuropsychology, Neuropsychiatry, and Behavioral Neurology** Rhawn Joseph, 2013-04-17 This book is written for the clinician students and practitioners of neuropsychology neuropsychiatry and behavioral neurology It has been my intent throughout to present a synthesis of ideas and research findings I have reviewed thousands of articles and research reports and have drawn extensively from diverse sources in philosophy psychology neurology neurosurgery neuropsychiatry physiology and neuroanatomy in order to produce this text Of course I have also drawn from my own experience as a clinician and research scientist in preparing this work and in this regard some of my own biases and interests are represented I have long sought to understand the human mind and the phenomena we experience as conscious awareness After many years of studying a variety of Western and Eastern psychologists and philosophers including the Buddhist Taoist and Hindu philosophical systems I began while still an undergraduate student to formulate my own theory of the mind I felt though that what I had come upon were only pieces of half the puzzle What I knew of the brain was minimal Indeed it came as quite a surprise when one day I came across the journal *Brain* as I was browsing through the periodicals section of the library I was awed An entire journal devoted to the brain was quite a revelation Nevertheless although intrigued by the possibilities I resisted      *The Neurosciences.
