

Electrical safety for entertainers

INDG247(rev1), published
03/14

If you are an entertainer who uses electrical equipment for sound, lighting or other effects, this leaflet is for you. It sets out basic measures you can take to help control the electrical risks from use of such equipment. As well as guidance for your safety, there are some notes at the end about the law.

Introduction

Electric shocks can kill

Entertainers have been injured and even killed from electric shocks while performing or practising. Make sure your next performance is not your last.

Even a very small electric current flowing through your body can kill you. 50 millamps (a 40 watt light bulb only takes about 150 mA) can cause pain, paralysis of chest muscles and, after a few seconds, upset the heartbeat and cause death (Figure 1).

The higher the current, the more dangerous and quicker the effects.

Risks

If you damage electrical equipment, for example a cable, then bare live wires may be exposed.

Apparatus may be wrongly connected so that the outside metal parts become live.

Faulty, damaged or incorrectly used equipment can injure you. The risk of injury is increased if you are holding an instrument or microphone, as you may not be able to let go if it becomes electrified (live).

Even equipment which does not have a mains power supply itself can be dangerous. For example, on some systems audio equipment such as loudspeakers may have terminals at dangerous voltages.

Electrical equipment that overheats can cause fire.

Precautions

Maintenance, inspection, testing and repairs should only be carried out by someone who is suitably qualified and/or experienced such as an electrician.

Do not rely on other people's equipment being in a safe condition or properly connected. Check before you use it.
