The Political Economy of Institutional Change in the Electricity Supply Industry Carlos Rufin, 2003-01-01 Through a variety of analytical lenses formal modeling econometrics and case study comparisons Carlos Rufin fills a gap in the political economy of second wave or microeconomic reforms around the world More specifically he does so in the context of the electricity supply industry where such reforms have been as problematic as they have been widespread The author shows that ideological considerations and bargaining over the distribution of economic rents accruing from certain institutional arrangements are powerful shapers of institutional change At the same time the legacy of the past does not appear to have a clear or systematic effect on the direction of second wave reforms that seek to transform existing economic institutions If distributional conflicts can be resolved these conclusions provide grounds for optimism about the ability to create new institutions even in countries where little favorable precedent exists

Wilson,2010-02-25 Business is one of the major power centres in modern society The state seeks to check and channel that power so as to serve broader public policy objectives However if the way in which business is governed is ineffective or over burdensome it may become more difficult to achieve desired goals such as economic growth or higher levels of employment

In a period of international economic crisis the study of how business and government relate to each other in different countries is of more central importance than ever. These relationships have been studied from a number of different disciplinary perspectives: business studies, economics, economic history, law and political science, and all of these are represented in this handbook. The first part of the book provides an introduction to the ways in which five different disciplines have approached the study of business and government. The second section on the firm and the state looks at how these entities interact in different settings, emphasising such phenomena as the global firm and varieties of capitalism. The third section examines how business interacts with government in different parts of the world, including the United States, the EU, China, Japan and South America. The fourth section reviews changing patterns of market governance through a unifying theme of the role of regulation. Business-government relations can play out in divergent ways in different policy areas, and the fifth section examines the contrasts between different key arenas such as competition policy, trade policy, training policy and environmental policy. The volume provides an authoritative overview with chapters by leading authorities on the current state of knowledge of business-government relations, but also points to ways in which this work might be developed in the future, e.g. through a political theory of the firm.
