## **Electromagnetic Separation Of Radioactive Isotopes**

**Electromagnetic Separation of Radioactive Isotopes** Michael J. Higatsberger,Franz P. Viehböck,2012-12-06 During the war years the techniques for electromagnetic separation of radioactive nuclides have made great progress Ever since then further improvements have been accomplished to separate stable nuclides and in more recent years special attention has been given to the problem of separating radioactive nuclides especially in connection with spallation and high energy fission studies This poses slightly different problems as the amounts of radioactive material may be very small indeed highly diluted and the whole separation procedure has often to be a very rapid one as some of the nuclides have a very short half life On quite a number of the bigger machines very valuable operating experience has been gained and it was therefore a very good idea to hold a symposium covering all the aspects of electromagnetic separation where technicians could discuss the recent advances in this wide field It is to be welcomed that at this symposium all aspects were discussed from the details of vacuum systems as well as subjects like magnets ion sources scattering mechanisms to the health physics problems connected for example with the electromagnetic separation of plutonium as well as applications of mass separation These proceedings are therefore essential for all those who do work in this field or contemplate to enter into it Vienna May 1961
