Environmental Protection Agency. Library Systems Branch,1975 **Elementary Medical Biophysics** G. G. Járos,B. J. Meyer,2013-10-22 Elementary Medical Biophysics deals with the basic principles involved in the physical sciences such as the application of mathematical methods involving scientific problems the production of electricity in electrical and living cells as well as light sight and radioactivity The book reviews the graphical and mathematical representation of scientific problems and the use of units to measure temperature time force energy that are commonly employed in experiments and research work The text describes the forces involved in diffusion and osmosis that occur during the movement of molecules or other particles when these are unevenly dispersed in a fluid medium The force in diffusion causes a particle to move from an area of high concentration of particles into one with a low concentration until there is equilibrium Osmosis involves the force or movement of a solvent from an area of low concentration of the solute to an area with a high concentration of the solute The book also explains the production of electricity in living cells of the body as well as the possible special affinity or preference that tumors or cancerous cells can have with radioactive substances The text is intended for nursing and paramedical students with courses in physiology biophysics and other programs related to the medical sciences *Bio and Nano Packaging Techniques for Electron Devices* Gerald Gerlach,Klaus-Jürgen Wolter,2012-07-16 This book discusses future trends and developments in electron device packaging and the opportunities of nano and bio techniques as future solutions It describes the effect of nano sized particles and cell based approaches for packaging solutions with their diverse requirements It offers a comprehensive overview of nano particles and nano composites and their application as packaging functions in electron devices The importance and challenges of three dimensional design and computer modeling in nano packaging is discussed also ways for implementation are described Solutions for unconventional packaging solutions for metallizations and functionalized surfaces as well as new packaging technologies with high potential for industrial applications are discussed The book brings together a comprehensive overview of nano scale components and systems comprising electronic mechanical and optical structures and serves as important reference for industrial and academic researchers **Research Grants Index** National Institutes of Health (U.S.). Tagging and Tracking of Marine Animals with Electronic Devices Jennifer L. Nielsen,Haritz Arrizabalaga,Nuno Fragoso,Alistair Hobday,Molly Lutcavage,John Sibert,2009-06-10 The 2nd international tagging and tracking symposium was held in San Sebastian Spain in October 2007 seven years after the first symposium was held in Hawaii in 2000 Sibert and Nielsen 2001 In the intervening seven years there have been major advances in both the capability and reliability of electronic tags and analytical approaches for geolocation of tagged animals in marine habitats Advances such as increased data storage capacity sensor development and tag miniaturization have allowed researchers to track a much wider array of marine animals not just large and charismatic species Importantly data returned by these tags are now being used in population analyses and movement simulations that can be directly utilized in stock assessments and other management applications Papers in this volume are divided into three sections the first describing insights into behavior achieved using acoustic archival and novel tags the second reporting on advances in methods of geolocation while the final section includes contributions where tag data have been used in management of marine species Accurate documentation of animal movements and behaviors in critical marine habitats are impossible to obtain with other technologies The management and conservation of marine species are critical in today s changing ocean environment and as electronic tags become more accurate and functional for a diversity of organisms their application continues to grow setting new standards in science and technology **Official Gazette of the United States Patent and Trademark Office** ,2006 Federal Financial Support of Physical Facilities and Major Equipment National Science Foundation (U.S.),1957 **Soviet Union** Theodore E. Wireless Bioelectronic Devices Driven by Deep Red Light Marie Jakešová, 2021-01-22 The use of electronic devices in medical care is one of the main targets of precision medicine The field of bioelectronic medicine uses electronic devices to diagnose or treat diseases and disorders in a complementary or alternative way to chemical drugs It has been more than sixty years since the world's first implantable battery driven cardiac pacemaker was implanted here in Sweden Since then electronic therapies have been implemented for neurological disorders such as Parkinson's disease epilepsy sensory and motor function restoration and many more However electronics can also be used for delivery of conventional drugs in a more controlled localized and specific fashion Therapeutic utility and patient comfort are maximized when the devices are as minimally invasive as possible The most important milestone in the development of the cardiac stimulator was making it wireless The early versions of the device required bulky parts to be placed outside of the body with transcutaneous electrical leads to the target site which led to high infection risk and frequent failures To date batteries remain the most common way to power implantable electronics However their large size and the necessity for replacement surgeries makes the technology relatively invasive Alternative approaches to wireless power transfer are thus sought after The most promising technologies are based on electromagnetic ultrasound or light coupling methods The aim of this thesis is to utilize tissue penetrating deep red light for powering implantable devices The overarching concept is an organic photovoltaic based on small molecule donor acceptor bilayer junctions which allows for ultrathin flexible minimally invasive devices Within this thesis the photovoltaic device was utilized in two ways Firstly the photovoltaics are fabricated to act as an integrated driver for other implantable electronic components 1 an organic electronic ion pump for acetylcholine delivery 2 a depth probe microelectrode stimulation device for epilepsy applications Secondly an alternative device the organic electrolytic photocapacitor is formed by replacing one of the solid electrodes by an electrolytic contact thus yielding a minimalistic device acting as a direct photoelectrical stimulator Within the thesis the photocapacitive stimulation mechanism is validated by studying voltage gated ion channels in a frog oocyte model Next two lithography based patterning techniques are developed for fabricating these devices with better resolution and on flexible substrates suitable for in vivo operation Finally a chronic implant is demonstrated for in vivo sciatic nerve stimulation in rodents The end result of this thesis is a series of novel device concepts and methods for stimulation of the nervous system using deep red light
