

Various constituent groups, including pharmaceutical manufacturers, the American Medical Association, patent drug producers, and the Bureau of Chemistry were involved. Wood argues that federal intervention was necessary because industrialization had separated consumers from food production and technology had made production so complex that consumers could not adequately evaluate quality.

The other motive for federal intervention, to fix the parameters for production and competition within the food industry, is examined next. Wood outlines the incentives of firms to use the state to promote profits and growth of market share. These aims were wrapped in moral arguments regarding the need for proper nutrition for workers, confusion over different state regulations in interstate commerce, and the need of reputable manufacturers to protect their reputations from adulterers and misbranders in other states. To develop these points Wood briefly explores conditions in six industries: flour and milling, bakery, canning, meat packing, liquors, and medicines. She notes that each industry was characterized by heterogeneous firms which took different stands on regulation.

The author continues with analysis of trade wars and regulatory policy in the food, beverage, and drug industries. She argues that trade wars had substantial impact on the development of support or opposition for a federal pure-food law. Woods illustrates by detailing conflicts over butter and oleomargarine, baking powder, ethical drugs and proprietary remedies, liquors, and canning. Based on these cases Wood finds that larger, better organized firms in drugs and liquors limited competition from small, low-cost producers by having their products declared adulterated, misbranded, or hazardous to health. She finds no evidence of concern until small producers began to erode the market share of incumbent firms. In the dairy industry on the other hand, smaller firms were pitted against large manufacturers of oleomargarine. The key for successful lobbying, according to Wood, was the early perception of common interests among firms and effective organization.

The last chapter summarizes the arguments regarding the strategic use of regulation with an examination of the congressional hearings and lobbying behind the Pure Food Act of 1906. The author describes the intermingling of consumer, business, and government interests in the development of the law which accounts for the contradictory goals and results of the legislation.

This is an important book because it illustrates what can be learned from economic history regarding regulation and the role of government in the economy. Wood is correct, I believe, that many current theories of regulation are too simplistic to explain adequately the complex objectives and impacts of most regulatory policies. Unfortunately, once this is admitted and richer theories are adopted, predictive power beyond the case at hand declines sharply. Moreover, the weakness of this book is its lack of a well-developed, analytical framework. In particular, while Wood describes the motive of firms and consumer advocates, she neglects the objectives of bureaucrats and politicians and how they might independently influence the course of regulatory policy. This, however, does not detract from Donna Wood's effort to examine and understand the origins of current regulations which affect behavior through out the economy.

Originally a doctoral dissertation in history at the University of Maryland (1975), the main thrust of this volume is to recite a story whose outlines are fairly well known, but this time from a feminist viewpoint. This sometimes means pointing up the sins of men while characterizing women with all the charity that partisanship will allow. The first
