Gas Tables (Revised) E. Rathakrishnan, 2004-03 *Gas Tables* Joseph H. Keenan, Frederick G. Keyes, 1957 **Gas Tables for Compressible Flow Calculations** S. M. Yahya, 2006 The subject of compressible flow or gas dynamics deals with the thermo fluid dynamic problems of gases and vapours It is now an important part of the undergraduate and postgraduate curricula Fundamentals of Compressible Flow covers this subject in fourteen well organised chapters in a lucid style A large mass of theoretical material and equations has been supported by a number of figures and graphical depictions Author's sprawling teaching experience in this subject and allied areas is reflected in the clarity and systematic and logical presentation **Gas Tables Steady One-Dimensional Flow of Perfect Gas** BALACHANDRAN, P., 2010 This data book on gas tables covers the subject matter in eleven well organized chapters supported with a number of graphical depictions It contains tabulated values of parameters obtained by solving one dimensional equations of compressible fluid flow It is useful as a reference data book for solving problems in compressible fluid dynamics or gas dynamics and propulsion engineering This book is designed for use by the students and professionals engaged in the fields of mechanical aerospace and chemical engineering **KEY FEATURES** Contains tabulated values and charts of compressible flow functions Equations used in preparing the tables are presented separately Separate table for standard atmosphere is given The present book can be used as a reference data table for university examinations Steam and Gas Tables with Computer Equations Thomas F. Jr. Irving, 2012-12-02 Steam and Gas Tables with Computer Equations presents tables illustrating the thermodynamic properties of steam and air along with computer equations Additional equations for a number of other gaseous substances which are useful in engineering investigations are included This book is comprised of two chapters and begins with a discussion on the thermodynamic properties of steam which can be divided into saturation and superheat properties The various thermodynamic properties including saturation temperature and pressure and liquid and vapor saturation entropy are represented with three basic types of equations from the triple point to the critical point The accuracy of the properties calculated from the base data is also considered The next chapter deals with the thermodynamic properties of air and other gases ethane hydrogen methane nitrogen oxygen propane n butane including those properties which are useful in engineering design and analysis specific heat at constant pressure and volume enthalpy and entropy function isentropic pressure function etc This monograph will serve as a useful guide for chemists mathematicians and computer programmers and scientists *Ideal-gas Tables for Helium Flow in the Mach Number Range from 40 to 100* James N.
