Gaseous Pollutants Characterization And Cycling:

Gaseous Pollutants Jerome O. Nriagu, 1992-03-17 Civilization's negative impact on the environment has vastly accelerated since the onset of the industrial revolution. Serious environmental contamination now threatens many ecosystems and perhaps ultimately the human race. While some of the most visible urban pollution may have abated, the larger problems of regional and global pollution, particularly by an ever-increasing number of trace contaminants, remain far from solved. While the link has been clearly established between long-range transport of gaseous pollutants and environmental issues such as acid rain, the greenhouse effect, and Arctic haze, the scientist's understanding of the fate of these pollutants in the atmosphere has been constrained by the lack of suitable analytical methods, the complexities of pollution sources, and the volume of potential contaminants involved. This volume offers some of the research tools needed to begin untangling these riddles: appropriate measurement technology, sophisticated analytical techniques, and a better understanding of physical and chemical processes in the atmosphere. Chapters by leading environmental scientists from the world over discuss standard and new methods of sampling and analyzing gaseous contaminants in the atmosphere. The uses of these analytical methods in deciphering material fluxes, the sources, occurrences, and characterization of volatile organic compounds in both indoor and outdoor environments. Gaseous Pollutants will be of great interest to scientists and engineers interested in monitoring air quality, atmospheric chemists studying the behavior and fate of trace contaminants in the air, and anyone concerned with air pollution and pollution control strategies. In addition to presenting a valuable profile of current research results, this book outlines the challenges that lie ahead, pointing students and environmental professionals alike toward important research opportunities in this dynamic field.

Chemistry and Analysis of Volatile Organic Compounds in the Environment

H.J. Bloemen, J. Burn, 2012-12-06 Interest in the occurrence and behaviour of volatile organic compounds (VOCs) is increasing due to their adverse effects on the environment and human health. It is essential that information is made available on the various aspects of research on VOCs to enable better understanding and control of the various environmental and human health threats. The information in this book will be used to improve communication and understanding of the various approaches. In particular, the potential and limitations of the described analytical methods will be essential in defining environmental studies and interpreting the results.

Environmental Pollution and Plant Responses Shashi Bhushan Agrawal, Madhoolika Agrawal, 2023-01-30 Comprehensive and global in scope, *Environmental Pollution and Plant Responses* provides an analysis of the research on the factors contributing to the deteriorating environmental quality and its effect on plant performance. The issues include environmental pollution and global climate change, response patterns of plants at different levels, mechanisms of interaction, tolerance strategies, and future research prospects. The author evaluates trends and gives management strategies for abating the problem. This volume highlights the complexities of environmental problems and the effect of pollution on every level of the ecosystem.

Biosphere-Atmosphere Exchange of Pollutants and Trace

Substances Sjaak Slanina, 2013-03-14 The biosphere is the ultimate sink for air pollutants and is also the source of many precursors for the formation of photo oxidants In any analysis of air pollution and for determining source receptor relationships reliable emission and pollutant concentrations or depositions must be taken into account together with their interactions between the atmosphere and the biosphere This book presents a number of authoritative review articles covering topics which include biosphere atmosphere exchange of ammonia nitrogen oxides ozone and sulfur containing gases the biological mechanisms involved in the exchange of trace gases as well as generalizations of deposition over Europe

The Modern Problems of Electrostatics with Applications in Environment Protection Ion I. Inculet, Florin Teodor Tanasescu, Radu Cramariuc, 2012-12-06 Among the many technological and legal efforts being made to restore our environment electrostatic technologies may well hold the solution to the cleaning of air water and soil Such technologies include non thermal plasma processing electron beam irradiation electrical discharge hybrid plasma systems The book also contains descriptions of the industrial implementation of the technology for NO_x and SO₂ removal using accelerated electrons This technique has been implemented in three plants built in China Poland and Japan Water pollution can be controlled and reduced by the use of ozone and UV irradiation Soil pollution can be reduced by electrical methods and by using electrostatics to spray agricultural pesticides Further articles cover the future of EHD systems in environmental protection new aspects of ESD research and industrial waste recycling technologies

Life Cycle Assessment of Natural Gas Vehicles K.-M. Nigge, 2012-12-06 In the context of conducting research on the consequences of scientific and technological advance the Europäische Akademie is also concerned with the support of scientists in the doctoral or post doctoral phase who are working on topics or methods within its research spectrum The first dissertation supported by the Europäische Akademie is published in this volume of the book series Wissenschaftsethik und Technikfolgenbeurteilung One of the research areas of the Europäische Akademie is the scientific investigation of environmental consequences of new technologies Energy conversion and transportation are thereby considered as important areas of technological advance The dissertation follows this thread by comparing the impacts of natural gas vehicles on human health and the environment with those of reference vehicles fueled by petrol and Diesel This question is addressed within the framework of Life Cycle Assessment which is one important instrument of environmental Technology Assessment Within this framework a new method for the assessment of impacts on human health is developed and applied In this way the dissertation contributes to the methodological research of the Europäische Akademie in the field of Technology Assessment The book is addressed to researchers in the fields of alternative fuels Technology Assessment and Life Cycle Assessment in particular It may also be of interest to decisionmakers and the wider public concerned with environmental impacts of energy conversion and transportation It was written in English in order to be accessible to an international audience

Atmospheric Ozone as a Climate Gas Wei-Chyung Wang, Ivar S. Isaksen, 2013-06-29 One of the major findings in the 1992 IPCC report and the 1994

World Meteorological Organization's Ozone Assessment report was the identification of possible climatic effects over the last few decades resulting from anthropogenically induced changes in atmospheric ozone. The initial quantitative estimates of their direct climatic effects indicate significant impacts though large uncertainties exist and studies using general circulation models are needed. A point that needs to be addressed in particular is that atmospheric ozone differs from greenhouse gases in that it is formed and destroyed by chemical processes in the atmosphere due to interaction involving a large number of source gases e.g. H_2O , NO , CO_2 , NMHC, N_2O , CH_4 and the CFCs. Therefore the indirect effect of climate chemistry interaction involving atmospheric ozone is an important aspect for consideration in general circulation models. During the last few years there have been several international workshops related to atmospheric ozone. In 1987 a NATO workshop on atmospheric ozone was held in Lillehammer, Norway. More recently two workshops were organized to discuss the topic General Circulation Model Study of Climate Chemistry Interaction. The first was held August 19-21, 1992 in Oslo, Norway and the second held May 26-27, 1993 in Albany, New York, USA. The two workshops were IAMAP activities under the Trace Constituent Working Group.

Exposure Analysis Wayne R. Ott, Anne C. Steinemann, Lance A. Wallace, 2006-10-26. Written by experts, Exposure Analysis is the first complete resource in the emerging scientific discipline of exposure analysis. A comprehensive source on the environmental pollutants that affect human health, the book discusses human exposure through pathways including air, food, water, dermal absorption and for children, non-food ingestion.

ENVIRONMENTAL AND ECOLOGICAL CHEMISTRY - Volume II Aleksandar Sabljic, 2009-02-04. Environmental and Ecological Chemistry is a component of Encyclopedia of Chemical Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS) which is an integrated compendium of twenty-one Encyclopedias.
