Handbook of Neuropsychology François Boller, Jordan Grafman, 2000 Volume four of the all new Handbook of Neuropsychology addresses the disorders of visual behaviour This work reviews the neurophysiology of spatial vision as well as recent work on recognition deficits for faces objects and words Also presented are disorders of spatial representation of colour processing and of mental imagery Balint s syndrome blindsight and visuospatial or constructional disorders are discussed and the relationship between eye movements and brain damage are described in detail **Handbook of**

Neuropsychology ,1993 **Handbook of Neuropsychology** ,2000 *Handbook of neuropsychology. 1. Section 1: Introduction. Section 2: Attention* Giacomo Rizzolatti, François Boller, 2000 [Handbook of Neuropsychology, 2nd Edition](#) Francois Boller, 2000 *Handbook of Neuropsychology* ,1988 [Handbook of neuropsychology. Section 2: Attention](#) ,2000

Handbook of Neuropsychology F. Boller, François Boller, 1988 In recent years there has been an enormous increase in interest into disorders of higher cortical functions and into brain behavior relationships The Handbook of Neuropsychology has been planned as a reference source that will provide for the first time comprehensive and current coverage of both experimental and clinical aspects of neuropsychology The chapter authors have produced in depth reviews that go beyond a summary of their results and points of view Each chapter is up to date covering the latest developments in methodology and theory Discussion of bedside evaluations laboratory techniques as well as theoretical models are all to be found in the Handbook In addition the editors have attempted to make the Handbook as coherent as possible by encouraging minimal overlap in topic matter The first section introduces historical developments in neuropsychology approaches to the clinical and experimental assessment of higher cortical functions as well as statistical and methodological issues In addition the introduction covers cerebral dominance and specialization as well as models of cognition Section 2 Topic Editor Professor G Rizzolatti deals with normal and disordered attentional processes in experimental animals and in humans Section 3 Topic Editor Professor H Goodglass encompasses language aphasia and related disorders it is shared over Volumes 1 and 2 This section emphasizes both the classical syndromes of aphasic disorders as well as the contribution of modern neurolinguistics Special issues include bilingual and polyglot aphasia disorders of sign language aphasia in left handers as well as recovery and therapy of aphasia This section concludes with chapters on disorders of gestural behavior and apraxia **Cognition and Acquired Language Disorders - E-Book** Richard K. Peach, Lewis P. Shapiro, 2011-12-10 This new graduate level textbook Cognition and Acquired Language Disorders An Information Processing Approach addresses the cognitive aspects of language and communication It assembles the most recent information on this topic addressing normal cognitive processing for language in adults the cognitive impairments underlying language disorders arising from a variety of neurologic conditions and current assessment and treatment strategies for the management of these disorders The text is organized using an information processing approach to acquired language disorders and thus can be set apart from texts that

rely upon a more traditional syndrome based approach e.g stroke dementia and traumatic brain injury This approach facilitates the description and treatment of acquired language disorders across many neurologic groups when particular cognitive deficits are identified Other useful features of the text include assessment and treatment protocols that are based on current evidence These protocols provide students and clinicians a ready clinical resource for managing language disorders due to deficits in attention memory linguistic operations and executive functions Unique process oriented approach organizes content by cognitive processes instead of by syndromes so you can apply the information and treatment approaches to any one of many neurologic groups with the same cognitive deficit Cognitive domains are described as they relate to communication rather than separated as they are in many other publications where they are treated as independent behaviors A separate section on normal processing includes five chapters providing a strong foundation for understanding the factors that contribute to disordered communication and its management The evidence based approach promotes best practices for the most effective management of patients with cognitive communication disorders Coverage of the cognitive aspects of communication helps you meet the standards for certification in speech language pathology A strong author team includes two lead authors who are well known and highly respected in the academic community along with expert contributors ensuring a comprehensive advanced clinical text reference

Handbook of Stress and the Brain Part 1: The Neurobiology of Stress Thomas Steckler, N.H. Kalin, J.M.H.M. Reul, 2005-03-24 The Handbook of Stress and the Brain focuses on the impact of stressful events on the functioning of the central nervous system how stress affects molecular and cellular processes in the brain and in turn how these brain processes determine our perception of and reactivity to stressful challenges acutely and in the long run Written for a broad scientific audience the Handbook comprehensively reviews key principles and facts to provide a clear overview of the interdisciplinary field of stress The work aims to bring together the disciplines of neurobiology physiology immunology psychology and psychiatry to provide a reference source for both the non clinical and clinical expert as well as serving as an introductory text for novices in this field of scientific inquiry Part 1 addresses basic aspects of the neurobiology of the stress response including the involvement of neuropeptide neuroendocrine and neurotransmitter systems and its corollaries regarding gene expression and behavioural processes such as cognition motivation and emotionality Provides an overview of recent advances made in stress research Includes timely discussion of stress and its effect on the immune system Presents novel treatment strategies targeting brain processes involved in stress processing and coping mechanisms
