Medical and Veterinary Entomology Gary R. Mullen, Lance A. Durden, 2018-10-02 The first and second editions of Medical and Veterinary Entomology edited by Gary R Mullen and Lance A Durden published in 2002 and 2009 respectively have been highly praised and become widely used as a textbook for classroom instruction This fully revised third edition continues the focus on the diversity of arthropods affecting human and animal health with separate chapters devoted to each of the taxonomic groups of insects and arachnids of medical or veterinary concern including spiders scorpions mites and ticks Each chapter includes sections on taxonomy morphology life history and behavior and ecology with separate sections on those species of public health and veterinary importance Each concludes with approaches to management of pest species and prevention of arthropod borne diseases The third edition provides a comprehensive source for teaching medical and or veterinary entomology at the college and university level targeted particularly at upper level undergraduate and graduate postgraduate programs In addition to its value as a student textbook the volume has appeal to a much broader audience specialists and non specialists alike It provides a key reference for biologists in general entomologists zoologists parasitologists physicians public health personnel veterinarians wildlife biologists vector biologists military entomologists the general public and others seeking a readable authoritative account on this important topic Completely revised and updated

edition Includes a distinguished group of 40 nationally and internationally recognized contributors Sixteen new authors in addition to 25 continuing contributors from the first and second editions A new chapter on Arthropod Toxins and Venoms Illustrated with 560 mostly color figures and updated maps depicting the distribution of important arthropod taxa and arthropod borne diseases A significantly expanded and well illustrated chapter on Molecular Tools Used in Medical and Veterinary Entomology Coverage of emerging and newly recognized arthropod concerns including mosquito borne Zika and Chikungunya viruses tick borne Bourbon and Heartland viruses tick borne rickettsioses and anaplasmosis and red meat allergy associated with tick bites A 1700 word Glossary An Appendix of Arthropod Related Viruses of Medical and Veterinary Importance *Agents Transmissible from Simians to Man* Manfred Brack, 2012-12-06 The contacts between man and nonhuman primates enable the transmission of microorganisms from one species to the other Such contact may occur at quite different levels man and nonhuman primates may share the same ecosystem including the presence of vectors in the countries of origins of monkeys and apes the animals are captured to be sold or used for food field researchers have to stay near the animals in the wild an uncontrolled human population gets close enough to almost touch the animals in zoological gardens around the world pet owners establish bodily contact and finally researchers doing surgery or necropsies are exposed to an increased number of pathogens liberated from the organs and body fluids Usually monkeys and apes are more threatened with catching the microorganisms indigenous to man than vice versa but nevertheless outbreaks of true zoonoses with nonhuman primates as the source of infection have occurred Also the retransmission of originally human pathogens via nonhuman primates to man may pose a considerable risk to human health Unfortunately the information on the different agents transmissible between man and his relatives is too disseminated for practical use as it involves quite different scientific disciplines such as virology bacteriology parasitology primatology laboratory animal science etc It seemed therefore necessary to compile the current knowledge concerning this topic in a single publication Human infections of simian origin may be caused by several viruses bacteria fungi or endoparasites Ectoparasites in comparison are of little importance
