P. Felix D'Mello, 2000 This book presents specially commissioned reviews of key topics in farm animal metabolism and nutrition such as repartitioning agents near infrared reflectance spectroscopy and digestibility and metabolisable energy assays where major advances have recently been made or which continue to represent issues of significance for students and researchers Authors include leading researchers from Europe North America and Australia      **Botanicals** Kurt Reynertson, Khalid Mahmood, 2015-01-13 The international trade in plants is growing steadily as the worldwide demand for natural and botanical raw materials increases Customers value natural products and botanicals as green alternatives safer ingredients for their families which also represent an environmentally and socially responsible choice for the planet In order to build assurance      Spectroscopic Methods in Food Analysis Adriana S. Franca, Leo M.L. Nollet, 2017-12-14 Given the inherent complexity of food products most instrumental techniques employed for quality and authenticity evaluation e g chromatographic methods are time demanding expensive and involve a considerable amount of manual labor Therefore there has been an increasing interest in simpler faster and reliable analytical methods for assessing food quality attributes Spectroscopic Methods in Food Analysis presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis The determination of product quality and authenticity and the detection of adulteration are major issues in the food industry causing concern among consumers and special attention among food manufacturers As such this book explains why spectroscopic methods have been extensively employed to the analysis of food products as they often require minimal or no sample preparation provide rapid and on line analysis and have the potential to run multiple tests on a single sample i e non destructive This book consists of concepts related to food quality and authenticity that are quite broad given the different demands of the manufacturer the consumer the surveillance and the legislative bodies that ultimately provide healthy and safe products      *Plastics Additives* Jan C. J. Bart, 2006 Contains an outline of the principles and characteristics of relevant instrumental techniques provides an overview of various aspects of direct additive analysis by focusing on an array of applications in R and D production quality control and technical service      *Near-Infrared Spectroscopy in Food Science and*

*Technology* Yukihiro Ozaki, W. Fred McClure, Alfred A. Christy, 2006-10-25 This reference gives food science professionals a working understanding of near infrared spectroscopy NIRS and its role in maximizing food potential It explains the technical aspects of NIRS including basic principles characteristics of the NIR spectra instrumentation sampling techniques and chemometrics The book details applications of NIRS in agricultural and marine products foodstuffs and processed foods engineering and process monitoring and food safety and disease diagnosis **Infrared Spectroscopy for Food Quality Analysis and Control** Da-Wen Sun, 2009-03-05 Written by an international panel of professional and academic peers the book provides the engineer and technologist working in research development and operations in the food industry with critical and readily accessible information on the art and science of infrared spectroscopy technology The book should also serve as an essential reference source to undergraduate and postgraduate students and researchers in universities and research institutions Infrared IR Spectroscopy deals with the infrared part of the electromagnetic spectrum It measures the absorption of different IR frequencies by a sample positioned in the path of an IR beam Currently infrared spectroscopy is one of the most common spectroscopic techniques used in the food industry With the rapid development in infrared spectroscopic instrumentation software and hardware the application of this technique has expanded into many areas of food research It has become a powerful fast and non destructive tool for food quality analysis and control Infrared Spectroscopy for Food Quality Analysis and Control reflects this rapid technology development The book is divided into two parts Part I addresses principles and instruments including theory data treatment techniques and infrared spectroscopy instruments Part II covers the application of IRS in quality analysis and control for various foods including meat and meat products fish and related products and others Explores this rapidly developing powerful and fast non destructive tool for food quality analysis and control Presented in two Parts Principles and Instruments including theory data treatment techniques and instruments and Application in Quality Analysis and Control for various foods making it valuable for understanding and application Fills a need for a comprehensive resource on this area that includes coverage of NIR and MVA Pharmaceutical and Medical Applications of Near-Infrared Spectroscopy Emil W.
