 the Deaf community Myths grown from ignorance have long dogged the field and faulty assumptions and overgeneralizations  
 have persisted despite contrary evidence A study of the history of deaf education reveals patterns that have affected  
 educational policy and legislation for deaf people around the world these patterns are related to several themes critical to the  
 chapters of this volume One such theme is the importance of parental involvement in raising and educating deaf children  
 Another relates to how Deaf people have taken an increasingly greater role in influencing their own futures and places in  
 society In published histories we see the longstanding conflicts through the centuries that pertain to sign language and  
 spoken communication philosophies as well as the contributions of the individuals who advocated alternative strategies for  
 teaching deaf children More recently investigators have recognized the need for a diverse approach to language and  
 language learning Advances in technology cognitive science linguistics and the social sciences have alternately led and  
 followed changes in theory and practice resulting in a changing landscape for deaf and hard of hearing individuals and those  
 connected to them This second volume of the The Oxford Handbook of Deaf Studies Language and Education 2003 picks up

**Evidence-Based Practice in Audiology** Lena Wong, Louise Hickson, 2012-02-21 Evidence based practice EBP has proponents in all areas of

healthcare and was endorsed in a technical report in 2004 and a position statement in 2005 by the American Speech Language Hearing Association. Despite this, there is no text on EBP with specific application to audiology. It is particularly important in audiology where there are various interventions to assist people with hearing impairment and a growing body of research evidence that needs to be appraised by clinicians and researchers. This comprehensive book describes the principles of EBP as they apply to the evaluation of audiological interventions in children and adults. The reader will learn the process of EBP as well as gain knowledge on the evidence relating to specific interventions. Evidence Based Practice in Audiology is divided into four sections. The first section describes principles of EBP including how to evaluate evidence and how to facilitate evidence based decisions with clients. The remaining three sections provide a discussion of the best available evidence about hearing aids, cochlear implants and other interventions. These three sections contain chapters written by leading international authors who summarize the best available evidence, highlight where further evidence is needed and recommend how further evidence should be collected and applied in the clinic. The book ends with an appendix that contains recommended measures for the collection of evidence about different audiological interventions. Evidence Based Practice in Audiology is a highly valued resource for students, researchers, clinical audiologists, other health professionals and policy makers. For students, the book can be used for learning about research methods and about outcomes of interventions for children and adults with hearing impairment. For researchers, the book provides a useful summary of available research on important topics in habilitation and rehabilitation and may assist them to design future research studies. For clinical audiologists, the book can help them understand what evidence is and how this can be applied in clinical practice. Other health professionals who can benefit from this book include ENTs, pediatricians, geriatricians, GPs, nurses and aged care workers. The book can also guide policy makers and third party payers in their decisions about allocation of resources. The text is written with sufficient information for readers with different backgrounds and experience and careful attention has been paid to presenting complex information in an easy to understand format. Evidence Based Practice in Audiology is edited by two leading academics in research in audiological interventions. These editors have a rich clinical experience working with children and adults with hearing impairment and with other health professionals.
