Sustainable Protein Production and Consumption: Pigs or Peas? Harry Aiking, Joop de Boer, Johan Vereijken, 2006-10-12 Sustainable Protein Production and Consumption Pigs or Peas is a book that presents and explores the PROFETAS programme for development of a more sustainable food system by studying the feasibility of substituting meat with plant based alternatives The emphasis is on improving the food system by reducing the use of energy land and freshwater at the same time limiting the impacts on health and animal welfare associated with intensive livestock production It is clear that such a new perspective calls not only for advanced environmental and technological research but also for in depth societal research as the acceptance of new food systems is critically contingent on perceptions and attitudes of modern consumers In this unique multidisciplinary setting PROFETAS has opened up pathways for a major transition in protein food production and consumption not by just analyzing the food chain but rather by exploring the entire agricultural system including biomass for energy production and the use of increasingly scarce freshwater resources The study presented here is intended to benefit every stakeholder in the food chain from policymakers to consumers and it offers guiding principles for a transition towards an ecologically and socially sustainable food system from a multi level perspective
