Handbuch Der Experimentalphysik Volume 19:

Handbuch Der Experimentalphysik Wilhelm Wien, F. Harms, Solid State Physics, Part B, 1959-01-01 Solid State Physics Part B *Weimar Culture And Quantum Mechanics: Selected Papers By Paul Forman And Contemporary Perspectives On The Forman Thesis* Alexei B Kojevnikov, Cathryn Carson, Helmuth Trischler, 2011-05-11 This volume reprints Paul Forman's classic papers on the history of the scientific profession in post World War I Germany and the invention of quantum mechanics The Forman thesis became famous for its demonstration of the cultural conditioning of scientific knowledge in particular by showing the historical connection between the culture of Weimar Germany known for its irrationality and antiscientism and the emerging concept of quantum acausality From the moment of its publication Forman's research provoked intense historical and philosophical debates In 2007 participants at an international conference in Vancouver Canada discussed the implications of the Forman thesis for contemporary historiography Their contributions collected in this volume represent cutting edge research on the history of the quantum revolution and of German science

Electrode Processes in Solid State Ionics M. Kleitz, J. Dupuy, 2012-12-06 The idea of an Advanced Study Institute on the theme of electrode reactions on solid electrolytes was put forward by Dr J Dupuy at the meeting of the International Society for Electrochemistry in Eindhoven in September 1973 Through Dr Dupuy the Solid State Physics Department of Lyons University offered the Institute possibilities of accommodation in Corsica that seemed particularly tempting The subject matter appealed to a number of people for a variety of reasons A great deal of development work on applications comes up against interface phenomena which appreciably reduce anticipated performances Numerous potential applications of specific electrodes or gauges appear that would benefit from a more systematic approach From a more fundamental viewpoint interface phenomena on ionic crystals are the subject of independent investigations in quite distinct research fields such as solid state physics and electrochemistry The choice of an interpretation from among the different models available is very often not a straightforward matter and an attempt to promote a synthesis by bringing together the proponents of the various schools could not fail to be rewarding *Mathematical Theory of Compressible Fluid Flow* Richard Von Mises, 2012-12-02 Mathematical Theory of Compressible Fluid Flow covers the conceptual and mathematical aspects of theory of compressible fluid flow This five chapter book specifically tackles the role of thermodynamics in the mechanics of compressible fluids This text begins with a discussion on the general theory of characteristics of compressible fluid with its application This topic is followed by a presentation of equations delineating the role of thermodynamics in compressible fluid mechanics The discussion then shifts to the theory of shocks as asymptotic phenomena which is set within the context of rational mechanics The remaining two chapters is a thorough description of the hodograph method These chapters provide a comparison of the modern integration theories The features characteristics and application of transonic flow are also explored This book is an ideal advanced textbook for both graduate students and research workers

Advances in Cryogenic Engineering K. D. Timmerhaus, 2013-11-11 The 1960 Cryogenic Engineering Conference Committee is pleased to present the papers of the 1960 Cryogenic Engineering Conference Discussion of the papers wherever available has also been included to make the papers more valuable and interesting to the reader This annual meeting once again has been held in Boulder Colorado Many delegates will recall that similar meetings were held in Boulder in 1954 1956 and 1957 However this year because of the continued growth of this conference the National Bureau of Standards Boulder Laboratories was joined by the College of Engineering of the University of Colorado in hosting this sixth national conference The Cryogenic Engineering Conference Committee is happy to acknowledge the help of an Editorial Committee which contributed valuable assistance in the difficult and thankless task of screening the preliminary papers and also reviewing the final drafts This committee headed by R B Jacobs who also served as chairman for the Conference Committee consisted of R W Arnett D B Chelton R J Corruccini T M Flynn R H Kropschot R M McClintock A F Schmidt L E Scott and W A Wilson

Flügge,2012-12-06 v Formation of negative ions by processes other than attachment in the gaseous phase at low X po 17 Introduction As early as 1912 J J THOMSON 32J in his first mass spectro graph observed negative ions of O Cl H and what he believed to be N He at first ascribed these to possible dissociation of polar gaseous compounds by electron impact but control studies using ionization at low energies in glow discharges indicated that this was not the origin O W RICHARDSON 33J in his book on emission of electricity from hot bodies reported negative ions to come from hot salts From there on many experimental studies over the years indicated that negative ions could be formed by various processes By the middle nineteen hundred and thirties the data fairly clearly identified several processes as being active and MASSEY and SMITH 34J developed the theory underlying some of them More data are summarized in MASSEY S excellent little monograph on Negative Ions and in L SSEY and BURHOP S recent book 35 Since that period stimulated by various investigations and certain industrial problems very careful studies of the appearance of such ions by mass spectrograph have been carried out in the laboratory of K G EMELEUS in Belfast by SLOANE and his co workers 3J that haw clarified the questions and indicated what ions have been observed and something of the processes at work *Report - Naval Ship Research and Development Center* David W. recent issues In each case the development of the theme is traced from its inception to the present day The list of contributors includes Nobel laureates fellows of the Royal Society and other distinguished international physicists Where appropriate specialists in the history of physics have written their own commentaries providing a valuable counterpoint to the physicists perspectives
