*Readings in Object-Oriented Database Systems* Stanley B. Zdonik, David Maier, 1990  
This comprehensive collection is a survey of research in object oriented databases offering a substantive overview of the field. Section introductions and over 40 research papers presented in their original scope and detail. The balanced selection of articles presents a confluence of ideas from both the language and database research communities that have contributed to the object oriented paradigm. The editors develop a general definition and model for object oriented databases and relate significant research efforts to this framework. Further, the collection explores the fundamental notions behind object oriented databases, semantic data models, implementation of object oriented systems, transaction processing interfaces and related approaches. Research and theory are balanced by applications to CAD systems, programming environments and office information systems.
