se da una adecuada ecología nutricional tiene que existir un ambiente ruminal adecuado. Se da un proceso simbiótico entre los microbios y el rumiante. La acción fermentativa se lleva a cabo básicamente en las dos primeras porciones del tracto gastrointestinal por los microbios en el rumen y el ambiente físico-químico que los rodea y los productos principales de la fermentación en rumen son los ácidos grasos volátiles. Este libro está dirigido a aquellas personas que inician el aprendizaje de la nutrición de rumiantes. Puede ser utilizado como texto y consulta para profesionales de Biología, Agronomía y Medicina Veterinaria y Zootecnia. Contiene diecisiete capítulos que reseñan los Principios de la nutrición de rumiantes de una forma descriptiva y a la vez técnico-científica de los aspectos más importantes relacionados con la fisiología digestiva, las proteínas, los glúcidos, los lípidos, la energía, las vitaminas, los minerales y los problemas metabólicos relacionados con los rumiantes.
