Hurricanes Paul V. Kislow, 2008 A hurricane is a tropical storm with winds that have reached a constant speed of 74 miles per hour or more Hurricane winds blow in a large spiral around a relative calm centre known as the eye The eye is generally 20 to 30 miles wide and the storm may extend outward 400 miles As a hurricane approaches the skies will begin to darken and winds will grow in strength As a hurricane nears land it can bring torrential rains high winds and storm surges A single hurricane can last for more than 2 weeks over open waters and can run a path across the entire length of the eastern seaboard August and September are peak months during the hurricane season that lasts from 1 June to 30 November This book presents the facts and history of hurricanes

What are the potential causes of incorrect predictions of tropical cyclone intensification in medium-range ensemble forecasts? Nico Bauer, 2022-05-12 Tropical cyclones TC are the most destructive weather phenomena in the world These storm systems are common in large parts of highly populated tropics and subtropics with favorable atmospheric conditions Society's vulnerability to them and the associated annual economic costs have risen steadily mean worldwide insured losses averaged 75 billion USD per year in the 10 years between 2009 and 2019 Cinco et al 2016 analyzed TC data and observed that in the period from 1951 to 2013 an average of 19.4 TCs entered the Philippine Area of Responsibility in the

Western North Pacific and nine TCs moved over the islands. Consequently the Philippines have the highest number of landfalling storms and the highest rate of severe TC worldwide. In turn the TCs that move over the islands into the South China Sea frequently affect the coast of Vietnam. Through a spatial assessment of TC vulnerability, Nguyen et al. 2019 have demonstrated a high or very high susceptibility in most parts of coastal Vietnam. The most extreme event over the WNP in the last century was Typhoon Haiyan, which caused 6 300 deaths and widespread economic and socioeconomic damage. This significant susceptibility implies the high importance of improving weather forecast models for greater predictive capability. In recent decades the quality of forecasting tropical cyclone tracks has increased steadily at the European Center for Medium Range Weather Forecast and other numerical weather prediction centers. Nevertheless intensity predictions still present more significant challenges.

Hurricane of Independence Tony Williams, 2009-07-01. The sleeper history hit of 2008 released in paperback to coincide with the heart of hurricane season. On September 2, 1775, the eighth deadliest Atlantic hurricane of all time landed on American shores. Over the next days it would race up the East Coast striking all of the important colonial capitols and killing more than four thousand people. In an era when hurricanes were viewed as omens from God, what this storm signified to the colonists about the justness of their cause would yield unexpected results. Drawing on ordinary individuals and well known founders like Washington and Franklin, Tony Williams paints a stunning picture of life at the dawn of the American Revolution and of the weighty choice people faced at that deciding moment. *Hurricane of Independence* brings to life an incredible time when the forces of nature and the forces of history joined together to produce courageous stories of sacrifice, strength, and survival.

1996 Atlantic Hurricane Season, *Cyclone Country* Chrystopher J. Spicer, 2020-09-09. The storm has become a universal trope in the literature of crisis, revelation, and transformation. It can function as a trope of place, of apocalypse, and epiphany of cultural mythos and story, and of people and spirituality. This book explores the connections between people, place, and environment through the image of cyclones within fiction and poetry from the Australian state of Queensland, the northern coast of which is characterized by these devastating storms. Analyzing a range of works including Alexis Wright's *Carpentaria*, Patrick White's *The Eye of the Storm*, and Vance Palmer's *Cyclone*, it explains the cyclone in the Queensland literary imagination as an example of a cultural response to weather in a unique regional place. It also situates the cyclones that appear in Queensland literature within the broader global context of literary cyclones.

Disaster and Human History Benjamin Reilly, 2022-05-13. Human history is periodically punctuated by natural disasters, from Vesuvius eruption to the modern day Covid 19 pandemic. Volcanoes have buried entire cities, earthquakes have reduced structures to smoldering ruins. Floods and cyclones have wreaked havoc on river valleys and coastlines, and desertification and climate change have weakened society's underpinnings. Death tolls are often escalated by starvation and illness, which frequently occur in tandem. This second edition assesses natural disasters on human society and the effect of strategies developed to reduce their impact. This book addresses the interconnectivity of disaster and human responsibility.
