Encyclopaedic Dictionary of Physics James Thewlis,1975      **Technical News Bulletin** United States. National Bureau of Standards,1968      **Technical News Bulletin of the National Bureau of Standards** United States. National Bureau of Standards,1968      **Technical News Bulletin** ,1968      *A Student's Guide Through the Great Physics Texts* Kerry Kuehn,2015-12-17 This book provides a chronological introduction to modern atomic theory which represented an attempt to reconcile the ancient doctrine of atomism with careful experiments performed during the 19th century on the flow of heat through substances and across empty space Included herein are selections from classic texts such as Carnot s Reflection on the Motive Power of Fire Clausius Mechanical Theory of Heat Rutherford s Nuclear Constitution of Atoms Planck s Atomic Theory of Matter and Heisenberg s Copenhagen Interpretation of Quantum Theory Each chapter begins with a short introduction followed by a reading selection Carefully crafted study questions draw out key points in the text and focus the reader s attention on the author s methods analysis and conclusions Numerical and laboratory exercises at the end of each chapter test the reader s ability to understand and apply key concepts from the text Heat Radiation and Quanta is the last of four volumes in A Student s Guide through the Great Physics Texts The book comes from a four semester undergraduate physics curriculum designed to encourage a critical and circumspect approach to natural science while at the same time preparing students for advanced coursework in physics This book is particularly suitable as a college level textbook for students of the natural sciences history or philosophy It might also serve as a textbook for advanced high school or home schooled students or as a thematically organized source book for scholars and motivated lay readers In studying the classic scientific texts included herein the reader will be drawn toward a lifetime of contemplation      *Computed Tomography* Shayne Chau,Christopher M Hayre,2022-09-15 This book acts as a primer for radiographers upon performing computed tomography CT examinations The focus resides in radiation physics radiobiology anatomy imaging protocols and image evaluation It seeks to provide readers insight into the practical and innovative approaches within CT backed up with key literature and examples in practice Recent innovations and the importance of new technology to acquire enhanced quality remain a focal point These are essential in understanding the importance of dose optimization patient anatomy and common pathology observed Patient care will remain central in this book supported with a dedicated chapter discussing effective communication patient education informed consent coupled with the assessment of laboratory results and vital signs The editors draw from recent publications and clinical expertise supported with the growing trend of technological advances utilized within the CT environment Critically this volume focuses on the role of CT for an array of audiences but more specifically undergraduate and postgraduate radiographers worldwide      **Books in Print** ,1991      *Dimensions* ,1967      Modern Pyrometry Alexander Villenovich Frunze,2025-07-23 This book is devoted to the ways of further development of pyrometry A feature of pyrometry is that pyrometers are always calibrated by BB blackbody but the radiation spectrum of

real objects differs from the radiation spectrum of BB Therefore a perfectly calibrated pyrometer will accurately measure the temperature of BB but it will measure the temperature of a real object emitting differently from BB with an error The more the intensity and spectrum of radiation of the measured object and BB differ the greater this error Therefore pyrometer measurements always require correction The author proposes original correction methods that take into account both the radiation spectrum of the object and its dependence on the temperature of the object It is shown that increasing the accuracy of measurements is impossible without instruments for measuring the temperature spectral emissivity of objects and that the creation of instruments for such measurements is already possible The analysis of metrological problems of pyrometry is carried out and ways of their solution are given
