Encyclopedia of Clinical Assessment, 1992 **Encyclopedia of Clinical Assessment**, 1984 Encyclopedia of Clinical Assessment, Vol. 2 R. H. Woody, 1980 Encyclopedia of Clinical Assessment Donald N. Michael, 1980 Scientific Foundations of Clinical Assessment Stephen N. Haynes, Gregory T. Smith, John D. Hunsley, 2018-11-08

Scientific Foundations of Clinical Assessment is a user friendly overview of the most important principles and concepts of clinical assessment. It provides readers with a science based framework for interpreting assessment research and making good assessment decisions such as selecting the best instruments and measures and interpreting the obtained assessment data. Written in a direct and highly readable fashion with plenty of clinical examples that illustrate the relevance of psychometric principles and assessment research, this text is one every professional and graduate student needs to read. The second edition is expanded and fully updated and includes additional coverage of the principles and methods of developing new assessment instruments.

The Assessment of Object Relations Phenomena in Adolescents: Tat and Rorschach Measures Francis D. Kelly, 2014-01-14

This book offers clinicians a long awaited comprehensive paradigm for assessing object relations functioning in disturbed younger and older adolescents. It gives a clear sense of how object relations functioning is manifest in different disorders and illuminates how scores on object relations measures are converted into a therapeutically relevant diagnostic matrix and formulation. Outlining the process of object relations assessment, Kelly presents vividly detailed cases of a range of disorders including anorexia nervosa, borderline states, depressive disorders, and trauma. The cases portray the vicissitudes of object relations functioning and disruption that result in a unique structural developmental composite for a given adolescent. A major concern is demonstrating the utility and validity of two object representation measures: The Mutuality of Autonomy Scale (MOA) and The Social Cognition Object Relations Scale (SCORS), that are the main ones employed in the assessment of adolescents. MOA and SCORS scores facilitate a multidimensional understanding of the nuances of an adolescent's object relations functioning and provide clinicians with organized, theory-based data leading to clear, specific treatment directions and guidelines and appropriate therapeutic programming. The book addresses the following questions: Is individual psychotherapy indicated? Will this adolescent benefit from an insight-oriented approach? What are the likely directions that transference parameters will take in the treatment? What types of countertransference reactions are likely to be anticipated in a given patient? Is medication likely to be helpful in making this adolescent more accessible for treatment?

Focusing only on adolescents, covering both the TAT and the Rorschach and utilizing object relations theory as its major interpretive foundation, the book offers practitioners an alternative to general references based on a more actuarial, nomothetic and atheoretical interpretive approach. It reflects one school of contemporary thought in projective assessment, one that advocates a more phenomenological, theory-based approach to test application and interpretation.
