National Library of Medicine (U.S.), 1973 First multi year cumulation covers six years 1965 70      *The Cybernetics Moment* Ronald R. Kline, 2015-07-15 Choice Outstanding Academic Title Cybernetics the science of communication and control as it applies to machines and to humans originates from efforts during World War II to build automatic anti-aircraft systems Following the war this science extended beyond military needs to examine all systems that rely on information and feedback from the level of the cell to that of society In *The Cybernetics Moment* Ronald R Kline a senior historian of technology examines the intellectual and cultural history of cybernetics and information theory whose language of information feedback and control transformed the idiom of the sciences hastened the development of information technologies and laid the conceptual foundation for what we now call the Information Age Kline argues that for about twenty years after 1950 the growth of cybernetics and information theory and ever more powerful computers produced a utopian information narrative an enthusiasm for information science that influenced natural scientists social scientists engineers humanists policymakers public intellectuals and journalists all of whom struggled to come to grips with new relationships between humans and intelligent machines Kline traces the relationship between the invention of computers and communication systems and the rise decline and transformation of cybernetics by analyzing the lives and work of such notables as Norbert Wiener Claude Shannon Warren McCulloch Margaret Mead Gregory Bateson and Herbert Simon Ultimately he reveals the crucial role played by the cybernetics moment when cybernetics and information theory were seen as universal sciences in setting the stage for our current preoccupation with information technologies Nowhere in the burgeoning secondary literature on cybernetics in the last two decades is there a concise history of cybernetics the science of communication and control that helped usher in the current information age in America Nowhere that is until now Readers have in *The Cybernetics Moment*

the first authoritative history of American cybernetics Information Culture An extremely interesting and stimulating history of the concepts of cybernetics This is a book for everyone to read relish and think about Choice As a whole the book presents a comprehensive in depth retrospective analysis of the contribution of the American scientific school to the making formation and development of cybernetics and information theory An unquestionable advantage of the book is the skillful use of numerous bibliographic sources by the author that reflect the scientific engineering and social significance of the questions being considered competition of ideas and developments and also interrelations between scientists Cybernetics and System Analysis Dr Kline is perhaps uniquely situated to take on so large and complicated a topic as cybernetics Readers unfamiliar with Wiener and his work are well advised to start with this well written and thorough book Those who are already familiar will still find much that is new and informative in the thorough research and reasoned interpretations IEEE History Center The most comprehensive intellectual history of cybernetics in Cold War America Journal of American History The book will be most valuable as historical background for the large number of disciplines that were involved in the cybernetics moment computer science communications engineering information theory and the social sciences of sociology and anthropology IEEE Technology and Society Magazine Ronald Kline s chronicle of cybernetics certainly does what an excellent history of science should do It takes you there to the golden age of a new exciting field You will almost smell that cigar Second Order Cybernetics Kline s The Cybernetics Moment tracks the rise and fall of the cybernetics movement in more detail than any historical account to date Los Angeles Review of Books

**From Newspeak to Cyberspeak** Slava Gerovitch, 2004-09-17 In this book Slava Gerovitch argues that Soviet cybernetics was not just an intellectual trend but a social movement for radical reform in science and society as a whole Followers of cybernetics viewed computer simulation as a universal method of problem solving and the language of cybernetics as a language of objectivity and truth With this new objectivity they challenged the existing order of things in economics and politics as well as in science The history of Soviet cybernetics followed a curious arc In the 1950s it was labeled a reactionary pseudoscience and a weapon of imperialist ideology With the arrival of Khrushchev s political thaw however it was seen as an innocent victim of political oppression and it evolved into a movement for radical reform of the Stalinist system of science In the early 1960s it was hailed as science in the service of communism but by the end of the decade it had turned into a shallow fashionable trend Using extensive new archival materials Gerovitch argues that these fluctuating attitudes reflected profound changes in scientific language and research methodology across disciplines in power relations within the scientific community and in the political role of scientists and engineers in Soviet society His detailed analysis of scientific discourse shows how the Newspeak of the late Stalinist period and the Cyberspeak that challenged it eventually blended into CyberNewspeak

**Systems Science and Cybernetics - Volume I** Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising

in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational

intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

**Emergent Information: A Unified Theory Of Information Framework** Wolfgang Hofkirchner, 2012-12-19 At the dawn of the information age a proper understanding of information and how it relates to matter and energy is of utmost importance for the survival of civilisation Yet attempts to reconcile information concepts underlying science and technology with those en vogue in social science humanities and arts are rather rare This book offers a new approach departing from fragmented information concepts Many academics refrain from undergoing unifications as most undertakings are reductionistic This book contends that it is the noble task of an as yet to be developed science of information to go one step in the direction of a unified theory of information without falling back into neither reduction nor anthropomorphisation To be able to succeed in an ambitious task like this the book advocates the application of complex systems theory and its philosophical underpinnings Information needs to be interpreted in terms of self organisation to do justice to the richness of its manifestations The way the book does so will provide the reader with a deep insight into a basic feature of our world The following are discussed in the volume A Science of Information A New Way of Thinking Praxis Onto Epistemology Evolutionary Systems Design Evolutionary Systems Ontology Evolutionary Systems Methodology Capurro's Information Concept Trilemma A Multi Stage Model of Evolutionary Types of Information Pattern Formation Code Making and Constituting Sense A Triple C Model of Systemic Functions of Information Cognising Communicating and Co Operating Nine Categories of Information Capabilities Reflectivity physical Psyche biotic Consciousness human Connectivity physical Signalability biotic Languageability human Cohesiveness physical Coherency biotic Communitarity human Nine Categories of Information Response physical Flexible Response biotic Reflexion human Correspondences physical Signals biotic Symbolic Acts human Assemblage physical Assignment biotic Association human A Unified Theory of Information for about and by means of the Information Society

*Design Cybernetics* Thomas Fischer, Christiane M. Herr, 2019-07-30 Design Cybernetics Navigating the New Design cybernetics offers a way of looking at ourselves curious creative and ethical humans as self organising systems that negotiate their own goals in open ended explorations of the previously unknown It is a theory of and for epistemic practices learning designing researching that is deeply committed to the autonomy of others and hence offers no prescriptive methodology Design cybernetics describes design practice as inextricable from conversation a way of enquiring developing shared understanding and reaching the new that harnesses reliable control as well as error and serendipity Recognising circular causality observer dependency and non determinability design cybernetics extends beyond tenets of scientific research into the creative ethical and aesthetic domain From this perspective design is not an ill conceived subset of scientific research Instead scientific research emerges as a particularly restricted subset of the broader human activity of design This volume offers a cross section of design cybernetic

theory and practice with contributions ranging across architecture interior lighting studies product design embedded systems design pedagogy design theory social transformation design research epistemology art and poetics as well as theatre and acting Addressing designers design educators and researchers interested in a rigorous practice based epistemology it establishes design cybernetics as a foundational perspective of design research This is a conceptually elegant well structured and comprehensive presentation of design cybernetics It fills a gap in the literature of the field Ken Friedman Chair Professor Tongji University This book offers a valuable and timely introduction to second order cybernetics as society grapples with complex issues like climate change and rising inequality Joichi Ito Director of the MIT Media Lab     *Systems Science and Cybernetics - Volume III* Francisco Parra-Luna, The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic

vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Rabinovich, 2008-02-08 The Person 1 Boris Abramovich Trakhtenbrot his Hebrew given name is Boaz is universally admired as a founding ther and long standing pillar of the discipline of computer science He is the eld s preeminent distinguished researcher and a most illustrious trailblazer and disseminator He is unmatched in combining farsighted vision unfaltering c mitment masterful command of the eld technical virtuosity aesthetic expr sion eloquent clarity and creative vigor with humility and devotion to students and colleagues For over half a century Trakhtenbrot has been making seminal contributions to virtually all of the central aspects of theoretical computer science inaugur ing numerous new areas of investigation He has displayed an almost prophetic ability to foresee directions that are destined to take center stage a decade or more before anyone else takes notice He has never been tempted to slow down or

limit his research to areas of endeavor in which he has already earned recognition and honor Rather he continues to probe the limits and position himself at the vanguard of a rapidly developing eld while remaining as always unassuming and open minded

#### **Mathematical Reviews**, 1997

#### **Elements of the General Theory of Optimal Algorithms** Ivan V. Sergienko, Valeriy

K. Zadiraka, Oleg M. Lytvyn, 2022-01-11 In this monograph the authors develop a methodology that allows one to construct and substantiate optimal and suboptimal algorithms to solve problems in computational and applied mathematics Throughout the book the authors explore well known and proposed algorithms with a view toward analyzing their quality and the range of their efficiency The concept of the approach taken is based on several theories of computations of optimal algorithms of interpolation interlination and interflatation of functions to name several Theoretical principles and practical aspects of testing the quality of algorithms and applied software are a major component of the exposition The computer technology in

construction of efficient algorithms for computing solutions to problems of computational and applied mathematics is also explored. The readership for this monograph is aimed at scientists, postgraduate students, advanced students, and specialists dealing with issues of developing algorithmic and software support for the solution of problems of computational and applied mathematics.

When people should go to the book stores, search inauguration by shop, shelf by shelf, it is essentially problematic. This is why we provide the book compilations in this website. It will very ease you to see guide **Encyclopedia Of Cybernetics** as you such as.
