The Coming of Materials Science R.W. Cahn,2001-03-16 The Coming of Materials Science both covers the discipline of materials science and draws an impressionistic map of the present state of the subject The first chapter examines the emergence of the materials science concept in both academe and industry The second and third chapters delve back into the prehistory of materials science examining the growth of such concepts as atoms crystals and thermodynamics and also examine the evolution of a number of neighbouring disciplines to see what helpful parallels might emerge The book contains

numerous literature references Many refer to the earliest key papers and books while others are to sources often books offering a view of the present state of a topic Early references are to the past but as the book continues it brings the reader up to date with more recent sources The author Professor Robert Cahn FRS has striven to be critical about the history of the discipline of materials science and to draw general conclusions about scientific practice from what he has discovered about the evolution of materials science Further issues that the book highlights include What is a scientific discipline How do disciplines merge and differentiate Can a discipline also be interdisciplinary Is materials science a real discipline A large range of themes is presented in the book and readers are invited to interact with the author if they reach alternative conclusions This book is not just for reading and reference but exists to stimulate thought and provoke discussion as well

Inquiries and Provocations Herbert Feigl, 2012-12-06 The title is his own Herbert Feigl the provocateur and the soul if we may put it so of modesty wrote to me some years ago I m more of a catalyst than producer of new and original ideas all my life but then he completed the self appraisal with just a few exceptions perhaps We need not argue for the creative nature of catalysis but will simply remark that there are new and original ideas in the twenty four papers selected for this volume in the extraordinary aperrus of the 25 year old Feigl in his Vienna dissertation of 1927 on Zufall und Gesetz in the creative critique and articulation in his classical monograph of 1958 on The Mental and the Physical and the reader will want to turn to some of the seventy other titles in our Feigl bibliography appended Professor Feigl has been a model philosophical worker above all else honest self aware open minded and open hearted keenly devotedly and even arduously the student of the sciences he has been a logician and an empiricist Early on he brought the Vienna Circle to America and much later he helped to bring it back to Central Europe The story of the logical empiricist movement and of Herbert Feigl s part in it has often been told importantly by Feigl himself in four papers we have included here
