Encounters With Autistic States A Memorial Tribute To Frances Tustin:

Encounters with Autistic States Theodore Mitrani, Judith L. Mitrani, 1997-08 This text presents the work of 21 eminent psychoanalysts and child therapists from three continents including Professors Didier Houzel of France and Renata Gaddini of Italy Drs David Rosenfeld of Argentina James Grotstein Victoria Hamilton Judith Mitrani and Thomas Ogden of the USA and Susanna Isaacs Elmhirst and Isca Wittenberg of England who explore and expand upon the work of the late Frances Tustin which was devoted to the psychoanalytic understanding of the bewildering elemental world of the autistic child Her realization that neurotic and borderline patients are haunted by the same primeval forces which constitute an enclave of autism has been profound and the notion that autistic manoeuvres serve as a protective shell against the terrifying premature awareness of bodily separateness and dissolution into nothingness has had a substantial impact upon the re thinking of many notable workers in the mental health field Frances Tustin Today Judith L. Mitrani, Theodore Mitrani, 2015-02-20 *Frances Tustin Today* explores some of the ways and means by which Tustin's work has enabled psychoanalytic clinicians to enter into the elemental domain of sensation what Bion called the proto mental area of the psyche soma Through detailed clinical contributions of several of her exponents worldwide this book demonstrates how her ideas rooted in decades of work with children on the autistic spectrum have influenced and are being expanded extended and applied to the treatment of ordinary patients from early childhood through adulthood The contributors to this volume represent a selection of the contemporary thinking that organically grew out of Tustin's discoveries and show that Tustin's model has added new dimensions to the fields of infant observation family therapy and neuro psychology Each chapter is augmented by demonstrable clinical experience *Frances Tustin Today* is a valuable resource for psychoanalysts psychotherapists educators and parents who are interested in learning more about this uniquely independent clinical observer's findings and their impact upon the treatment of autistic states in children adolescents and adults by contemporary workers in the field of mental health Judith L Mitrani and Theodore Mitrani are Fellows of The International Psycho Analytical Association Training and Supervising Psychoanalysts at The Psychoanalytic Center of California in Los Angeles They are founding members of the Board of Trustees of The Frances Tustin Memorial Trust and authors editors translators and teachers in the private practice of psychoanalysis and psychoanalytic therapy with Adults and Children in Los Angeles California **Contacting the Autistic Child** Jorge L. Ahumada, Luisa C. Busch de Ahumada, 2017-02-17 Amid long standing controversy on their causes which most regard as neurological and despite their increasing social impact there has been scant progress in the therapy of the autistic spectrum disorders Currently fashionable attempts at treatment through behavioural cognitive focal approaches do not seek resolution only re education and rehabilitation *Contacting the Autistic Child* explores the clinical process in the early psychoanalytic treatment of autistic children Organised around five detailed clinical case studies and drawing on the ideas of major clinicians in child analysis such as Tustin Winnicott and Alvarez this

book sets out a clear programme for working with and understanding autistic children in a psychoanalytic setting with a particular focus on issues of clinical technique but also conceptual matters Working on the notion that autistic disorders come to be as Winnicott and Tustin saw it from an early rupture of the affective communication between baby and mother this book aims at reinstating such communication in the child analyst interaction By way of detailed description of what goes on in the analytic link the authors strive to make the reader share in what goes on in the clinical setting evincing how though at times excruciatingly hard on the therapist resolution is attainable Once the primal dialogue to use Ren Spitz's terms is reinstated in a stable way in session it flows by itself into the family ambience The clinical accounts of this book make the argument that psychoanalysis carried along Tustin's technical lines and subject to the proviso that treatment starts early preferably in the first three years of life is the treatment of choice for autistic spectrum disorders The strong methodological narrative is important and notable in light of the doubts criticism and uncertainty that have surrounded the psychoanalytic treatment of autism This novel highly detailed narrative of five successful early treatments aims to help dispel the pessimism pervading the field and help to redress the lives of many more children Contacting the Autistic Child will appeal to psychoanalysts and psychoanalytic psychotherapists endeavouring to obtain results in a major area lacking resolute approaches

Autistic Phenomena and Unrepresented States Howard B Levine, Jani Santamaria, 2023-01-12 With contributions from Anne Alvarez Joshua Durban Jeffrey L Eaton Bernard Golse Didier Houzel Howard B Levine Suzanne Maiello Sylvain Missonnier Bernd Nissen Marganit Ofer and Jani Santamaria The capacity to create psychic representations is now understood to be a developmental achievement Without it meaning cannot be ascertained and this can lead to psychic voids and unrepresented states which can contribute to the development of autism and autistic spectrum disorders ASD Unrepresented states are also implicated and encountered in other non autistic non neurotic conditions such as psychosomatic disorders addictions perversions and primitive character disorders The affects that unrepresented states produce or are associated with are often those of terror emptiness annihilation and despair The organisation of the psyche consists of psychotic i.e. unstructured as well as neurotic parts of the mind unintegrated as well as integrated areas and unrepresented areas with little meaning as well as represented states consisting of specific ideas imbued with affect Given this organisation we should expect to find both an unstructured and a dynamic unconscious in all patients This implies that to some degree unrepresented and unintegrated states are universal and will exist and be encountered in all of us Consequently the opportunities and challenges presented by the understanding and treatment of autism and ASD where the unrepresented and its consequences e.g. defensive organisations employed to protect against annihilation anxiety and catastrophic dread can be encountered may offer us metaphors and clues relevant to aspects of the treatment of all patients no matter what their dominant diagnoses may be Packed with theory and helpful case studies this carefully edited collection from an international array of experts in the field is essential reading for all practising clinicians *Engaging Primitive Anxieties of*

the Emerging Self Howard B. Levine, David G. Power, 2018-04-17 This book based on the 7th International Conference on the Work of Frances Tustin in 2014 offers readers a contribution to the understanding and treatment of primitive mental states and primitive character disorders

Field Theory in Child and Adolescent Psychoanalysis Elena Molinari, 2017-03-27 Field Theory in Child and Adolescent Psychoanalysis looks at the intersection of two types of psychoanalysis that challenge the classic model child analysis and field theory Children impose a faster pace on the analysis and a much less stable structure than adults whilst psychoanalytic field theory looks at the patient analyst relationship in a much wider context than is typical By combining these two approaches this book advocates the use of a set of tools and techniques that allow the psychoanalyst to understand and react much faster than normal and to be better prepared for unexpected developments This book shows the reader how to navigate smoothly and steadily through passages of tense analytical situations which might otherwise feel like being trapped in a maze with no obvious way out Bion's writings allowed the improvement of new techniques or instruments for exploring the psychoanalytical process Discussion about technique is a hugely important and necessary step for improving the evidence base of psychoanalytic psychotherapy This book also seeks to improve the research in therapeutic effectiveness and unexpected relations between body and mind emotions and dreams By doing so Elena Molinari contributes to expanding the perspectives that child and adolescent psychoanalysts have had in exploring primitive functioning of the mind With specific emphasis on working with difficult situations and patients Field Theory in Child and Adolescent Psychoanalysis is a highly practical book that will appeal greatly to child psychoanalysts and psychoanalytic psychotherapists as well as psychologists paediatricians and advanced students studying across these fields

Asperger's Children Robin Holloway, 2018-05-08 The DSM 5 2013 classifies all autism related disorders including Asperger's under the heading autism spectrum disorder This book argues that this lumping together is unhelpful for clinicians Instead finer diagnostic distinctions are helpful to clinicians who treat children with Asperger's This book spells out in detail the psychodynamics the author has repeatedly uncovered in Asperger's children adolescents and adults and explores the central factors in the aetiology of Asperger's Disorder There is a section suggesting how Asperger's can be adequately diagnosed from the outside using external descriptive features and more importantly from the inside based on internal psychodynamic processes Finally there is a section outlining psychodynamic treatment approaches to Asperger's children based on their psychodynamics and on which type of Asperger's is present The book includes numerous case illustrations to help the reader appreciate the central psychodynamics that are regularly observed in Asperger's children namely splitting of the self into victim and bully aspects and projective identification into remote objects

The Many Faces of Asperger's Syndrome Trudy Klauber, Maria Rhode, 2018-04-24 This is the first book on the psychoanalytic treatment of children young people and adults with Asperger's syndrome It includes multidisciplinary contributions on psychiatric perspectives and psychological theories of the condition There is an overview of relevant psychoanalytic theory and chapters on Asperger's original paper on firstperson accounts on

assessment and on care in the community Clinical case histories of children young people and the first published account of work with adults provide the possibility of using psychoanalytic work as a means of diagnostically differentiating between sub groups as well as providing a detailed insight into the emotional experience of people with Asperger s syndrome

Trauma and Primitive Mental States Judy K. Eekhoff,2019-01-24 Trauma and Primitive Mental States An Object Relations Perspective offers a clinically based framework through which adult survivors of early childhood trauma can re engage with painful past events to create meaningful futures for themselves The book highlights the use of the body and the mind in working with these early unmentalized and unrepresented states illustrating the value of finding language that embodies emotions and working in the here and now of transference and counter transference Including a range of examples of how early trauma can thus be re presented and clinically understood the book illustrates how patients can discover themselves and leave their repetitive patterns of suffering behind Written by a clinician with over 30 years experience this will be fascinating reading for psychoanalysts and psychotherapists as well as any mental health professional working with childhood trauma

Psychoanalytic Technique and Theory Judith L. Mitrani,2018-03-08 This volume consists of a series of essays inspired by Freud s paper on Jensen s novel Gradiva she who steps along In the story a young archaeologist Norbert Hanold suffers from delusions but is able to unravel the mysteries of his emotional life and mind with the aid of a woman who does not challenge these delusions but rather steps along with Hanold gradually helping him to disentangle truth from fantasy through what Freud called cure by love Gradiva originally felt to be the source of Hanold s malady eventually becomes the agent of its resolution and of his return to health This extraordinary tale formed the basis for the author s concept of taking the transference Through clinical vignettes various aspects of psychoanalytic technique useful from the first encounter between patient and analyst and throughout the process of the development of mind to termination are illustrated in detail

Early Development and its Disturbances Jorge Canestri,Marianne Leuzinger-Bohleber,Mary Target,2018-03-29 In this volume internationally well known experts discuss whether psychoanalysis with its rich mix of clinical experiences and conceptualizations of early development and symptoms has something unique to offer through deepening the understanding of children suffering from this and similar developmental disturbances The contributors consider therapeutic strategies as well as possibilities of early prevention Surprisingly psychoanalysts have only during the past few years actively engaged in the on going and very important controversial discussions on attention deficit hyperactivity disorder ADHD There may be many reasons for the increasing interest in this topic over the past few years for example the dialogue between psychoanalysis and contemporary neurobiology brain research which opens a fascinating window on an old problem in European culture the mind body problem This exchange also promises to enlarge the understanding of psychic problems probably connected with some neurobiologically based pathologies widely assumed to include ADHD
