Remote Sensing of the Asian Seas Vittorio Barale, Martin Gade, 2018-09-07 A wide variety of marginal basins ranging from polar to equatorial regions and a few sizeable enclosed basins can all be included among the Asian Seas The Arctic Ocean shelf seas off Siberia the sheltered basins along the Pacific Ocean s western rim the coastal seas of the northernmost Indian Ocean including the semi enclosed Red Sea and Persian Gulf the Caspian Sea the remnants of the Aral Sea and a score of brackish or freshwater lakes such as Lake Balkhash and Lake Baykal all exhibit a

multiplicity of environmental features and processes Understanding the peculiarities of such a large and varied collection of marine and coastal types requires integrated observation systems among which orbital remote sensing must play an essential role This volume reviews the current potential of Earth Observations in assessing the many Asian seascapes using both passive and active techniques in diverse spectral regions such as measuring reflected visible and near infrared sunlight and surface emissions in the thermal infrared and microwave range or surface reflection of transmitted radar pulses in the microwave range An in depth evaluation of the available spectral regions and observation techniques as well as of novel multi technique methods ensures that suitable tools are indeed accessible for exploring and managing the wealth of resources that the Asian Seas have to offer

Contourites M. Rebesco,A. Camerlenghi,2008-11-25 Contourites are sediments deposited or substantially reworked by bottom currents The study of contourites is crucial for several fields of fundamental and applied research paleoclimatology and paleo oceanography since these fairly continuous and relatively high resolution sediments hold the key for priceless information on the variability in circulation pattern current velocity oceanographic history and basin interconnectivity hydrocarbon exploration since accumulation of source rocks may be favored by weak bottom currents whereas clean deep sea sands may be formed by robust flows and slope stability since low permeability fine grained contourites facilitate the formation of overpressurized gliding planes when fresh contourites with a high pore water content becomes rapidly loaded or when their rigid biosiliceous microfabric collapses due to diagenetic conditions Despite its significance this group of sediments is poorly known by the majority of non specialists Notwithstanding the growing interest and the intensified research in contourites a textbook that might also serve as a reference book on contourites was missing until now This book addresses all aspects of the knowledge in the field of contourites and provides an authoritative and comprehensive coverage of the subject It also can serve as a standard reference work for non specialists and in particular postgraduate students university teachers and lecturers researchers and professionals who are seeking an authoritative source of information about contourites Reviews both theoretical topics and case histories Provides practical advice on multidisciplinary research techniques Provides also nonspecialist users with an intuitively accessible cross referenced and comprehensive coverage of the knowledge in the field Provides a helpful tool for research in the preparation of classroom lectures

Antarctica D. W. H. Walton,2013 A dramatically illustrated book by leading international scientists which describes Antarctica s central role in global scientific research

Antarctica David W. H. Walton,2013-03-28 Antarctica is the coldest and driest continent on Earth a place for adventure and a key area for global science Research conducted there has received increasing international attention due to concerns over destruction of the ozone layer and the problem of global warming and melting ice shelves This dramatically illustrated new book brings together an international group of leading Antarctic scientists to explain why the Antarctic is so central to understanding the history and potential fate of our planet It introduces the beauty of the world s greatest wilderness its remarkable attributes and the global importance of the

international science done there Spanning topics from marine biology to space science this book is an accessible overview for anyone interested in the Antarctic and its science and governance It provides a valuable summary for those involved in polar management and is an inspiration for the next generation of Antarctic researchers Beyond the Moon James Greig McCully, 2006 Finally someone has written a comprehensive easily readable explanation of the tides on earth that is both simple enough for students and solid enough for their professors Step by step by analogy and illustration Beyond the Moon describes how the cyclical motion of the near solar system is impressed upon the earth's oceans and how the hydraulics over the continental shelf and the geography of the coastline orchestrate this rhythm into the bewildering variety of tide patterns seen around the globe This volume demystifies the complexity of the tides by systematically examining its many constituents and demonstrates that OC Nature is at once awesome in complexity and beautiful in simplicity OCO *Marine Genetic Resources, Access and Benefit Sharing* Bevis Fedder, 2013-05-29 Access to genetic resources and Benefit Sharing ABS has been promoted under the Convention on Biological Diversity with the aim of combining biodiversity conservation goals with economic development However as this book shows since its inception in 1992 implementation has encountered multiple challenges and obstacles This is particularly so in the marine environment where interest in genetic resources for pharmaceuticals and nutrients has increased This is partly because of the lack of clarity of terminology but also because of the terms of the comprehensive law of the sea UNCLOS and transboundary issues of delineating ownership of marine resources The author explains and compares relevant provisions and concepts under ABS and the law of the sea taking access benefit sharing monitoring compliance and dispute settlement into consideration He also provides an overview of the implementation status of ABS relevant measures in user states and identifies successful ABS transactions A key unique feature of the book is to illustrate how biological databases can serve as the central scientific infrastructure to implement the global multilateral benefit sharing mechanism proposed by the Nagoya Protocol The research for this book was supported by both the Bremen International Graduate School for Marine Sciences GLOMAR and the International Research Training Group INTERCOAST Integrated Coastal Zone and Shelf Sea Research **Ocean Circulation and Climate** Jennifer MacKinnon, Lou St Laurent, Alberto C. Naveira Garabato, 2013-10-22 Diapycnal mixing in the ocean interior is driven by a wide range of processes each with distinct governing physics and unique global geography Here we review the primary processes responsible for turbulent mixing in the ocean interior with an emphasis on active work from the past decade We conclude with a discussion of global patterns of mixing and their importance for regional and large scale modeling accuracy

Shanmugam, 2020-10-31 Mass Transport Gravity Flows and Bottom Currents Downslope and Alongslope Processes and Deposits focuses solely on important downslope and alongslope processes The book provides clear definitions and characteristics based on soil mechanics fluid mechanics and sediment concentration by volume It addresses Slides Slumps and Debris Flows Grain Flows Liquefied Fluidized Flows and Turbidity Currents Density plumes Hyperpycnal Flows the Triggering Mechanisms of Downslope Processes Bottom Currents and Soft Sediment Deformation Structures The mechanics of each process are described in detail and used to provide empirically driven categories to help recognize these deposits in the rock record Case studies clearly illustrate of the problems inherent in recognizing these processes in the rock record and potential solutions are provided alongside future avenues of research An appendix also provides step by step guidance in describing and interpreting sediments Comprehensively addresses modern downslope and alongslope processes including definitions and mechanisms Provides key criteria for the recognition of depositional facies in the rock record Includes case studies to illustrate each downslope and alongslope process Identifies key problems and potential solutions for future research Uses pragmatic empirical data driven interpretations to revise conventional facies models **Sea Ice** David N. Thomas, 2025-08-27 New edition of the leading resource on the Arctic and Southern Oceans with contributions from the world's experts on sea ice Sea Ice delivers insights into the very latest understanding of sea ice dynamics how we measure and model its extent the ecosystems that depend on sea ice and the effect of climate change on its distribution The book also discusses how sea ice influences the oceanography of underlying waters and the influence that sea ice has on the world's climate This newly revised and updated Fourth Edition looks at ice based food webs and the impact on global geopolitics as well as changes in human activity in the Arctic Written by a team of more than 80 of the world's leading experts from 13 countries Sea Ice includes information on Sea ice thickness distribution and snow and surface processes on sea ice The short term and long term dynamics of Arctic versus Antarctic Sea ice Current methods of satellite remote sensing of sea ice The ecology of sea ice from microbes to mammals to marine birds The cycling of contaminants across the ocean sea ice atmosphere interface In its new edition Sea Ice remains the leading multidisciplinary resource on the subject for all policy makers researchers and students with an interest in the polar regions and their role in the world's oceanic systems **Governability of Fisheries and Aquaculture: Theory and Applications** Maarten Bavinck, Ratana Chuenpagdee, Svein Jentoft, Jan Kooiman, 2013-04-10 Following from Fish for Life Interactive Governance for Fisheries Kooiman et al 2005 which presents an interdisciplinary and intersectoral approach to the governance of capture and aquaculture fisheries this volume pursues what interactive governance theory and the governability perspective contribute to the resolution of key fisheries problems these include overfishing unemployment and poverty food insecurity and social injustice Since these problems are varied and can be felt among governments resource

users and communities globally the diagnosis must be holistic and take account of principles institutions and operational conditions The authors argue that wicked problems and institutional limitations are inherent to each setting and must be included in the analysis The volume thereby offers a new lens and a systematic approach for analysing the nature of problems and challenges concerning the governance of fisheries explores where these problems are situated and how potential solutions may be found It now seems clear that the crisis in the world s fisheries is a much larger and more complex problem than many had imagined Yet examining it through the lens of governability may offer the best hope for alleviating it as well as alleviating similar crises in other social systems James R McGoodwin Professor Emeritus University of Colorado
