by James R Carey and James W Vaupel in Chapter 13 of this volume the bio demographic branches of demography are vibrant areas of demographic research that are rapidly growing and that have great potential to enrich and enlarge the domain of demography Not only can demographers learn much from biologists and epidemiologists but demographers can contribute much to research on life in general and to research on population health The increasing availability of data sources and much enhanced computing internet power will also lead demography to be more interactive with the other fields such as psychology environmental science economics business and management etc As discussed in this volume s Chapter 11 by Swanson and Pol for example it is now possible to link conventional demographic data sources of census surveys and vital statistics with administrative records such as social security tax reporting medical insurance hospital records school registration supermarket purchasing cards use etc while protecting individuals privacy Such linkages will substantially increase the value of demographic methods surveys and administrative records for scientific research and policy analysis as well as the applicability of demography in business and governmental decision making processes
