Wolk, 1984 US Air Power 1945-1990 David Baker, 2024-12-31 In the immediate aftermath of the Second World War the air forces of the United States faced unprecedented challenges Demobilization had stripped the armed forces of millions of personnel while the rapid transition from a wartime economy strained the aviation industry at the same time as the US Army Air Forces USAAF was re established as the independent US Air Force USAF US Air Power 1945 1990 Volume 1 US Fighters and Fighter Bombers 1945 1949 examines this pivotal period analyzing the first steps the USAF took to re establish its dominance in the skies during the early Cold War era This volume meticulously documents the political industrial and

technical decisions that shaped the development of the USAF's early jet fighters and fighter bombers. It covers the transition from propeller-driven aircraft to first-generation jet designs showcasing the radical innovations and experimental prototypes that laid the foundation for future air power. Readers will find detailed descriptions of key aircraft such as the P-80 Shooting Star, the F-86 Sabre, and the F-84 Thunderjet, which became operational despite the severe budget constraints and strategic uncertainties of the time. Author David Baker brings to light the untold stories behind these aircraft. He provides an integrated narrative that goes beyond mere type histories, weaving together the political backdrop, industrial struggles, and technological advancements that influenced the design and deployment of these pioneering jets. This approach offers a comprehensive view of how the USAF navigated the post-war landscape to emerge as a formidable force by 1949. The book also includes an appendix detailing speculative projects that never reached production, such as the McDonnell XF-85 Goblin parasite fighter, Convair XF-92 delta-wing interceptor, and many others, alongside tables listing the performance characteristics of both operational and experimental aircraft from this era. These sections offer invaluable insights into the what-ifs of aviation history, showing how alternative designs might have shaped air combat strategies differently. The first in an extensive series of volumes, each exploring different facets of US air power during the Cold War, subsequent titles will cover bombers, naval aviation, and the evolving roles of fighters and bombers through conflicts such as the Korean and Vietnam wars. Each volume will maintain a focus on the technical and engineering aspects that defined these aircraft rather than operational histories alone. Extensively illustrated, including rare photographs and specially commissioned color artwork, this book provides a thorough and engaging exploration of a transformative period in US air power history.

Coalition Air Warfare in the Korean War, 1950-1953 Air Force Historical Foundation. Symposium, 2005. In commemoration of the fiftieth anniversary of the Korean War, the official history offices of the U.S. Army, Navy, Marine Corps, and Air Force, and their respective historical associations, collaborated to sponsor as comprehensive a symposium as possible, including as participants some of the coalition partners who contributed forces and weapons to the war. The intent of this symposium, titled *Coalition Air Warfare during the Korean War, 1950-1953*, was to focus not only on the contributions made by the armed forces of the United States but also on those of America's allies. The diverse group of panelists and speakers included not only scholars with subject-matter expertise but also veteran soldiers, sailors, and airmen who had served in that conflict. It was hoped that the melding of these diverse perspectives would provide interesting, if sometimes conflicting, views about the Korean War. The symposium organizers designated an agenda of six specific panels for investigation, including Planning and Operations, Air Superiority, Air Support of Ground Forces, Air Interdiction and Bombardment, Air Reconnaissance,

and Intelligence and Logistical Support of Air Operations Each session began with commentary by the panel chairman which was followed by formal papers and in some instances included a lively question and answer session The papers and most of the proceedings found their way into print and are recorded here in an effort to permanently capture the activities challenges contributions and heroics of the coalition air forces and the airmen who fought during the Korean conflict *Tiger Check* Steven A. Fino, 2017-11-01 How did American fighter pilots respond to the challenges posed by increasing automation Spurred by their commanders during the Korean War to be tigers aggressive and tenacious American fighter pilots charged headlong into packs of fireball spewing enemy MiGs relying on their keen eyesight piloting finesse and steady trigger fingers to achieve victory But by the 1980s American fighter pilots vanquished their foes by focusing on a four inch square cockpit display manipulating electromagnetic waves and launching rocket propelled guided missiles from miles away In this new era of automated long range air combat can fighter pilots still be considered tigers Aimed at scholars of technology and airpower aficionados alike Steven A Fino's *Tiger Check* offers a detailed study of air to air combat focusing on three of the US Air Force's most famed aircraft the F 86E Sabre the F 4C Phantom II and the F 15A Eagle Fino argues that increasing fire control automation altered what fighter pilots actually did during air to air combat Drawing on an array of sources as well as his own decade of experience as an F 15C fighter pilot Fino unpacks not just the technological black box of fighter fire control equipment but also fighter pilots attitudes toward their profession and their evolving aircraft He describes how pilots grappled with the new technologies acutely aware that the very systems that promised to simplify their jobs while increasing their lethality in the air also threatened to rob them of the quintessential albeit mythic fighter pilot experience Finally Fino explains that these new systems often required new unique skills that took time for the pilots to identify and then develop Eschewing the typical great machine or great pilot perspectives that dominate aviation historiography *Tiger Check* provides a richer perspective on humans and machines working and evolving together in the air The book illuminates the complex interactions between human and machine that accompany advancing automation in the workplace **Rearming for the Cold War, 1945-1960** Elliott Vanveltner Converse, 2012 Book Description The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense author Elliott Converse presents a meticulously researched overview of changes in acquisition policies organizations and processes within the United States military establishment during the decade and a half following World War II Many of the changes that shaped the nature and course of weapons research and development production and contracting through the end of the century were instituted between 1945 and 1960 many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years This study is the first to combine the histories of the Office of the Secretary of Defense OSD and the military services into one account The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods **Building a Strategic Air**

Converse,2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960 the decade and a half that spanned the Truman and Eisenhower administrations following World War II These instruments of warfare aircraft armored vehicles artillery guided missiles naval vessels and supporting electronic systems when combined with nuclear warheads gave the postwar American military unprecedented deterrent and striking power 1 They were also enormously expensive The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two

distinct periods The first roughly coinciding with President Truman's tenure covers the years from the end of World War II through the end of the Korean War in 1953 The second spans the two terms of the Eisenhower presidency from 1953 through early 1961 The year 1953 marked a natural breakpoint between the two periods The Korean War had ended President Eisenhower and his defense team began implementing the New Look a policy and strategy based on nuclear weapons which they believed would provide security and make it possible to reduce military spending The New Look's stress on nuclear weapons along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century As used in this study the term acquisition encompasses the activities by which the United States obtains weapons and other equipment In surveying the history of acquisition between 1945 and 1960 this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period but it is not a weapons encyclopedia Instead it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies organizations and processes and the various forces influencing weapons programs
