**Global Environmental History** Ian G Simmons, 2008-03-05 Courses which deal with environmental history have long lacked a comprehensive overview I G

Simmons has made a significant contribution with a book that looks at the long term history of environment and humanity from 10 000 BC to AD 2000 This far reaching text considers the global picture and recognises the contributions of many disciplines including the natural sciences the social sciences and increasingly the humanities As a starting point this book takes the major phases of human technological evolution of the last 12 000 years and considers how these have affected the natural world It then considers the response to conditions such as climate change putting today s preoccupations into a long term perspective This is a book of history not prophecy and so makes no judgements on current anxieties      *Historical Disaster Experiences* Gerrit Jasper Schenk,2017-03-20 Historical disaster research is still a young field This book discusses the experiences of natural disasters in different cultures from Europe across the Near East to Asia It focuses on the pre industrial era and on the question of similarities differences and transcultural dynamics in the cultural handling of natural disasters Which long lasting cultural patterns of perception interpretation and handling of disasters can be determined Have specific types of disasters changed the affected societies What have people learned from disasters and what not What adaptation and coping strategies existed Which natural societal and economic parameters play a part The book not only reveals the historical depth of present practices but also reveals possible comparisons that show globalization processes entanglements and exchanges of ideas and practices in pre modern times      *What is Environmental History?* Johnson Donald Hughes,2006-12-08 What is environmental history It is a kind of history that seeks understanding of human beings as they have lived worked and thought in relationship to the rest of nature through the changes brought by time In this seminal student textbook J Donald Hughes provides a masterful overview of the thinkers topics and perspectives that have come to constitute the exciting discipline that is environmental history He does so on a global scale drawing together disparate trends from a rich variety of countries into a unified whole illuminating trends and key themes in the process Those already familiar with the discipline will find themselves invited to think about the subject in a new way Students and scholars new to environmental history will find the book both an indispensable guide and a rich source of inspiration for future work

*Interpreting the Environment at Museums and Historic Sites* Debra A. Reid,David D. Vail,2019-09-19 Interpreting the Environment at Museums and Historic Sites is for anyone who wants to better understand the environment that surrounds us and sustains us who wants to become a better steward of that environment and who wants to share lessons learned with others The process starts by focusing attention on the environment the physical space that constitutes the largest three dimensional object in museum collections It involves conceptualizing spaces and places of human influence spaces that contain layer upon layer documenting human struggles to survive and thrive This evidence exists in natural environments as well as city centers The process continues by adopting an environment centric view of the spaces destined to be interpreted This mind set forms the basis for devising research plans that document how humans have changed destroyed conserved and sustained spaces over time and the ways that the environment reacts Interpretation built on this evidence then becomes the

basis for minds on engagement with the places that humans inhabit and the spaces that they have changed and continue to manipulate Interpreting the Environment at Museums and Historic Sites provides a tool kit designed to help you research environmental history document evidence of human influence on land and the environment over time and tailor that knowledge to new public engagement It proposes a multi disciplinary approach that requires expertise in the humanities as well as the sciences and social sciences to best understand space and place over time It incorporates case studies of the theory and method of environmental history to explore how human goals take lasting shape in the environment creating working environments getting water generating and harnessing power growing food traveling and trading building things and preserving natural landscapes Features include the Interpreting the Environment Tool Kit to help you launch the good work of interpreting the environment Raw Materials the evidence landscape ecosystems artifacts and the built environment Preparation methods thinking like a naturalist scientist thinking like a historian combining approaches Planning envisioning the goal proactive message stewardship sustainability Partnerships sharing work strength in numbers allying across disciplinary divides united in efforts to inform the public about their individual and collective effects on the landscape and the environment Potential educating the public about people and places is part of a world wide goal with the cumulative effect of saving the planet one story at a time A Timeline and Bibliographic essay round out the book s resources

Textbook of Global Health Anne-Emanuelle Birn, Yogan Pillay, Timothy H. Holtz, 2017 Fully revised and updated this fourth edition equips students advocates and health professionals with building blocks for a critical understanding of global health It explores societal determinants of health and health inequities within and between countries and an array of actions seeking to address these issues in spheres of health and development aid solidarity cooperation global and domestic policymaking and civil society mobilization *The Age of Ecology* Joachim Radkau, 2014-04-03 This book is the first major study of the history of environmentalism from its origins in romanticism and the nature cults of the late 18th century to the global environmental movements of today Radkau shows that this is not a single story of the steady ascent of environmentalism but rather a multiplicity of stories each with its own dramatic tension between single issue movements and the challenges posed by the interconnection of environmental issues between charismatic leaders and bureaucratic organizations and between grassroot movements and global players While the history can be traced back several centuries environmentalism has flourished since the environmental revolution of 1970 spurred on by the Chernobyl nuclear disaster in 1986 and the growing concern about global warming While environmentalists often opposed the scientific mainstream they were also often led by scientific knowledge Environmentalism is the true Enlightenment of our time so much so that we can call our era the age of ecology This timely and comprehensive global history of environmentalism will be essential reading for anyone concerned with the most pressing global issues of our time Spirits of the Air Shepard Krech, 2009 Before the massive environmental change wrought by the European colonization of the South hundreds of species of birds filled the

region's flyways in immeasurable numbers. Before disease, war, and displacement altered the South's earliest human landscape, Native Americans hunted and ate birds and made tools and weapons from their beaks, bones, and talons. More significant to Shepard Krech III, Indians adorned themselves with feathers, invoked avian powers in ceremonies and dances, and incorporated bird imagery on pottery, carvings, and jewelry. Krech, a renowned authority on Native American interactions with nature, reveals as never before the omnipresence of birds in Native American life. From the time of the earliest known renderings of winged creatures in stone and earthworks through the nineteenth century, when Native southerners took part in decimating bird species with highly valued fashionable plumage, *Spirits of the Air* examines the complex and changeable influences of birds on the Native American worldview. We learn of birds for which places and people were named, birds common in iconography and oral traditions, birds important in ritual and healing, and birds feared for their links to witches and other malevolent forces. Still, other birds had no meaning for Native Americans. Krech shows us these invisible animals too, enriching our understanding of both the Indian bird dynamic and the incredible diversity of winged life once found in the South. A crowning work drawing on Krech's distinguished career in anthropology and natural history, *Spirits of the Air* recovers vanished worlds and shows us our own anew.

**Water in North American Environmental History** Martin V. Melosi, 2022-06-07 *Water in North American Environmental History* offers 25 case studies that explore the range of uses and perceptions of water throughout Canadian, Mexican, and United States history. Water has served a myriad of purposes: historically, as human sustenance, agricultural irrigation, sanitation, fire protection, military defense, power generation, transportation, and much more. Water and its uses provide an excellent entrance into the study of humans and the environment, not only because water is a vital resource for life but also because water as a medium is so intimately woven into the everyday experiences of humans and into society's economic, political, and social fabric. A North American perspective is not representative of the world's water use, but it is an area with a linked history and many overlapping human and environmental features and concerns. With a continental perspective, the book explores many disparate topics without being confined to the history and experiences of just one country. The chapters are short but descriptive and departure points for what they tell us about the human experience in dealing with water and the environmental implications of water use. The text leads students to consider water in relation to society and to the past. The book will be of interest to students of environmental history, geography, and the environmental sciences.

*Alexander Von Humboldt* Nicolaas A. Rupke, 2008-06 Alexander von Humboldt is one of the most celebrated figures of late modern science, famous for his work in physical geography, botanical geography, and climatology. This volume traces Humboldt's biographical identities through Germany's collective past to shed light on the historical instability of our scientific heroes.

**Afro-Eurasia: Assessing Sustainability** Ray C. Anderson, Louis Kotz, Stephen Morse, 2012-10-31 *Afro-Eurasia: Assessing Sustainability* focuses on the geographic area where humans originated and first began to make use of the natural world. Earth's largest landmass, stretching from

Portugal in the west across the steppes of Russia and south across Africa to the Cape of Good Hope By examining the history of human expansion as well as 21st century pressures to address ecosystem damage across the region international scholars and regional experts weave sustainability into core curricular subjects The interdisciplinary coverage includes national and regional environmental histories as well as business and commerce migration educational institutions law and government and the lifestyles of diverse populations
