magnetism and transmission electron microscope imaging The core results of the book are presented in four chapters describing the discovery of several new and unanticipated spin textures namely square shaped antiskyrmions elliptical Bloch skyrmions fractional antiskyrmions fractional Bloch skyrmions and elongated anti skyrmions in a single D2d Heusler compound It is shown that these textures can be understood by a combination of dipole dipole interactions and a chiral vector exchange that makes it possible to stabilize various spin textures even in the same compound The D2d compounds are the first non centrosymmetric systems shown to host several co existing non collinear spin textures
