Biology Microbiology Cell Biology Biochemistry Biophysics and History of Science The Physiological Properties of Plant Protoplasts Paul-Emile Pilet, 2012-12-06 The idea for the present book arose from a 3 day seminar which I organized in March 1984 for young research workers in plant physiology Participants came from several universities of the French speaking part of Switzerland and speakers from Basel Mtinchen Nottingham Perpignan Regensburg Sheffield Toulouse Yale ZUrich and Lausannne The theme of the seminar was chosen from the range of research fields of our Institute Meanwhile feeling it was important to bear in mind that some of our hearers were not specialists in the chosen topic I wished to provide a subject that would be of scientific methodological and epistemological interest The critical analysis of the structural and functional characteristics of plant protoplasts exactly met these criteria There exists ample material for discussion of the techniques of protoplast preparation methods used in morphological biological and biochemical studies and for the comparison of protoplasts with the cells from which they are obtained **Sustainable Agriculture Reviews 14** Harry Ozier-Lafontaine, Magalie Lesueur-Jannoyer, 2014-09-03 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children Sustainable agriculture is a discipline that addresses current issues such as climate change increasing food and fuel prices poor nation starvation rich nation obesity water pollution soil erosion fertility loss pest control and biodiversity depletion Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy soil science molecular biology chemistry toxicology ecology economy and social sciences Indeed sustainable agriculture decipher mechanisms of processes that occur from the molecular level to the farming system to the global level at time scales ranging from seconds to centuries For that scientists use the system approach that involves studying components and interactions of a whole system to address scientific economic and social issues In that respect sustainable agriculture is not a classical narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats problem sources Because most actual society issues are now intertwined global and fast developing sustainable agriculture will bring solutions to build a safer world Exploitation of Environmental Heterogeneity by Plants , 2012-12-02 There is a new emerging interest in the effects of gaps and patches on succession and biodiversity This innovative volume is a synthesis of studies of plant responses to temporal and spatial heterogeneity the exploitation of resources from pulses and patches by plants and their competition with neighbors in the face of this variability Aboveground the book focuses upon the nature of canopy patchiness consequences of this heterogeneity for the light environment and the mechanisms by which plants respond to and exploit this patchiness Belowground the text explores the heterogeneity of soil environments and how root systems obtain nutrients and water in the context of this temporal and spatial variability As a new reference in an evolving and growing field this text is sure to be a valuable tool for researchers and advanced students in plant physiology ecology agronomy and forestry alike Photomorphogenesis in plants R.E. Mediterranean-Type Ecosystems F.J. Kruger, D.T. Mitchell, J.U.M. Jarvis, 2012-12-06 The theory of ecological convergence underlies the biogeographers maps of world biome types It also determines the degree to which ecological principles derived from research on particular populations communities or ecosystems are generally valid and hence also to what extent resource management principles are general To quote Di Castri and Mooney 1973 In effect in order to assess the transfer of technology it is essential to know to what extent information acquired from studying one particular ecosystem is applicable to another ecosystem of the same type but situated in a different location The five relatively small isolated mediterranean climate zones of the earth each with its distinct fauna and flora have provided the ideal testing grounds for this theory A heritage of precisely focused ecosystems research has resulted beginning with the international comparative analyses conducted by Specht 1969a b but with antecedents in earlier studies in South Australia Specht and Rayson 1957 Specht 1973 Cody and Mooney 1978 reviewed the information available at the time for the four zones excepting Australia and concluded that the arrays of strategy types to be found among the different biotas were so similar that they could be explained only in terms of the convergence hypothesis nevertheless evident differences in community organization and dynamics especially phenology required closer study of resource availability and resource use patterns to better explain relations between form and function overall and to assess the degree of convergence at higher levels of organization than the population
