Encyclopedia of Sciences and Religions Anne Runehov, Luis Oviedo, 2013-05-18 To all who love the God with a 1000 names and respect science In the last quarter century the academic field of Science and Theology Religion has attracted scholars from a wide variety of disciplines The question is which disciplines are attracted and what do these disciplines have to contribute to the debate In order to answer this question the encyclopedia maps the self identified disciplines and religious traditions that participate or might come to participate in the Science and Religion debate This is done by letting each representative of a discipline and tradition answer specific chosen questions. They also need to identify the discipline in relation to the Science and Religion debate Understandably representatives of several disciplines and traditions answered in the negative to this question Nevertheless they can still be important for the debate indeed scholars and scientists who work in the field of Science and Theology Religion may need knowledge beyond their own specific discipline Therefore the encyclopedia also includes what are called general entries Such entries may explain specific theories methods and topics The general aim is to provide a starting point for new lines of inquiry It is an invitation for fresh perspectives on the possibilities for engagement between and across sciences again which includes the social and human sciences and religions and theology This encyclopedia is a comprehensive reference work for scholars interested in the topic of Science and Religion It covers the widest spectrum possible of academic disciplines and religious traditions worldwide with the intent of laying bare similarities and differences that naturally emerge within and across disciplines and religions today The A Z format throughout affords easy and user friendly access to relevant information Additionally a systematic question answer format across all Sciences and Religions entries affords efficient identification of specific points of agreement conflict and disinterest across and between sciences and religions The extensive cross referencing between key words phrases and technical language used in the entries facilitates easy searches We trust that all of the entries have something of value for any interested reader Anne L C Runehov and Lluis Oviedo Encyclopedia of Science and Religion, 2003 Publisher description How do the latest medical developments affect our beliefs in faith s healing power Can artificial intelligence compare with human consciousness Are genetic engineers interfering with Nature s work This reference work deals with these questions and others examining the issues and the history associated with the complex relationship between science and religion Articles by scientists of many fields philosophers and thinkers from all the major world religions present a variety of perspectives on the major scientific discoveries of our time and their effects on our religious belief system The History of Science and Religion in the

What models of the relation inform the contemporary scholarly discussion Are science and religion in conflict separate or in mutual creative interaction Science, Religion and Society Arri Eisen, Gary Laderman, 2015-03-04 This unique encyclopedia explores the historical and contemporary controversies between science and religion It is designed to offer multicultural and multi religious views and provide wide ranging perspectives Science Religion and Society covers all aspects of the religion and science dichotomy from humanities to social sciences to natural sciences and includes articles by theologians religion scholars physicians scientists historians and psychologists among others The first section General Overviews contains essays that provide a road map for exploring the major challenges and questions in science and religion Following this the Historical Perspectives section grounds these major questions in the past and demonstrates how they have developed into the six broad areas of contemporary research and discussion that follow These sections Creation the Cosmos and Origins of the Universe Ecology Evolution and the Natural World Consciousness Mind and the Brain Healers and Healing Dying and Death and Genetics and Religion organize the questions and research that are the foundation of the enormous interest and controversy in science and religion today Science and Religion Thomas Dixon, Geoffrey Cantor, Stephen Pumfrey, 2010-04-01 The idea of an inevitable conflict between science and religion was decisively challenged by John Hedley Brooke in his classic Science and Religion Some Historical Perspectives Cambridge 1991 Almost two decades on Science and Religion New Historical

Myth-Busting in Science and Religion Jim Slagle, 2025-07-14 Science and religion is one of those subjects where everyone knows a lot of things that just ain t so This is because of the numerous urban legends about how the two fields have interacted historically and how they do so today These false beliefs are ubiquitous in Western civilization especially in academia prompting many people to oversimplify the issues This book corrects many of these urban legends and confusions involving premodern cosmology the alleged persecution or even martyrdom of scientists for discoveries that challenged the religious status quo the history and nature of biological evolution the potential discovery of rational extraterrestrial life and whether miracles would somehow conflict with the laws that science has discovered As one might expect reality turns out to be much more complex than the stories suggest Science and Religion: Fifty Years After Vatican II Kenan Osborne OFM, Ki Wook Min, 2014-01-31 In the past one hundred years two major realities have changed both science and religion The world of science has been enriched by quantum physics the computation of the age of the universe archaeological data in the Middle East and a scientific stress on historical writing The world of religion has been enriched by the establishment of the World Council of Churches and the Second Vatican Council In the past fifty years major scientists and major religious leaders have met together again and again In the past fifty years religious leaders from Christianity Islam and Judaism have held a number of thought provoking conferences In this volume these gatherings are reviewed and evaluated Two major religious problems have challenged the science religion discussions namely which God should the scientists agree on the Trinitarian God Allah or Yahweh Which history of the universe sponsored by these three religions should scientists be looking for This volume raises questions and suggests some preliminary forms of serious discussion The Oxford Handbook of the Study of Religion Michael Stausberg, Steven Engler, 2016 The Oxford Handbook of the Study of Religions provides a comprehensive overview of the academic study of religions Written by an international team of leading scholars its fifty one chapters are divided thematically into seven sections The first section addresses five major conceptual aspects of research on religion Part two surveys eleven main frameworks of analysis interpretation and explanation of religion Reflecting recent turns in the humanities and social sciences part three considers eight forms of the expression of religion Part four provides a discussion of the ways societies and religious or religious organizations are shaped by different forms of allocation of resources i e economy Other chapters in this section consider law the media nature medicine politics science sports and tourism Part five

The CRISPR Revolution in Science, Religion, and Ethics Arvin M. Gouw, Ted Peters, 2025-01-23 This collection of original essays by scientists theologians religious studies scholars and ethicists offers an authoritative illuminating and thought provoking overview of the CRISPR controversy Genetic science at times ignites explosions of public controversy In the early 1990s the Human Genome Project along with Jurassic Park frightened the world with genetic determinism The cloning controversy of 1997 and the stem cell controversy of 1998 prompted bitter moral stand offs The fuse has just been lit for the next explosion the CRISPR controversy The CRISPR Revolution in Science Religion and Ethics channels the energy of that explosion into constructive reflection on the implications of this revolutionary science for religion ethics and public policy Chapters accessibly explain the science behind gene editing and draw out its implications for social impact This volume reviews the history of genomics from 1990 to date with special attention to cloning and stem cell research Contributors address the significance of gene technology for understanding human nature within specific religious traditions Most importantly they analyze selected ethical issues therapy versus enhancement germ line modification designer children patenting and the long term effects of gene drive proposals Science and Religion Zara Thokozani Kamwendo, 2024-10-04 This edited volume offers new and exciting perspectives on the social study of science and religion through current scholarship grounded in Science and Technology Studies STS The contributors explore how STS theories methods and concepts can be applied to the study of religion as well as how to incorporate aspects of religion into STS The purpose of the volume is to advance the social study of science and religion by fostering the already interdisciplinary nature of the field and to encourage engagement with the intersection between science and religion from a wide range of perspectives Religion and Science Fiction James H. Thrall, 2024-05-17 Religion and Science Fiction An Introduction quides students into deeper understanding of how religion and science fiction engage often overlapping questions This textbook introduces key ideas of religious studies through critical consideration of print and visual media that fall within the general category of science fiction The goal throughout is to help students move beyond simply identifying points of interrelation between religious studies and forms of what is often called more broadly speculative fiction to considering how the studied texts open new ways of thinking about human and nonhuman experience taken to be religious With discussion questions lists of key terms extensive additional resources and suggestions for projects and essay questions this book is a foundational text for students and instructors of religion and science fiction God and Ultimate Origins Andrew Ter Ern Loke, 2017-09-20 This book develops a novel argument which combines the Kalam with the Thomistic Cosmological Argument It approaches an ongoing dispute concerning whether there is a First Cause of time from a radically new point of view

namely by demonstrating that there is such a First Cause without requiring the controversial arguments against concrete infinities and against traversing an actual infinite although the book presents original defenses of these arguments as well This book also develops a novel philosophical argument for the Causal Principle namely that everything that begins to exist has a cause and offers a detailed discussion on whether a First Cause of time can be avoided by a causal loop It also addresses epistemological issues related to the Cosmological Argument which have been relatively neglected by recent publications and demonstrates contra Hawking et al the continual relevance and significance of philosophy for answering The Routledge Companion to Religion and Science James W. Haag, Gregory R. Peterson, Michael L. Spezio, 2012-03-12 The field of religion and science is one of the most exciting and dynamic areas of research today This Companion brings together an outstanding team of scholars to explore the ways in which science intersects with the major religions of the world and religious naturalism The collection provides an overview of the field and also indicates ways in which it is developing Its multicultural breadth and scientific rigor on topics that are and will be compelling issues in the first part of the twenty first century and beyond will be welcomed by students and scholars alike The Science of Religion: A **Defence** Donald Wiebe, 2018-10-16 Donald Wiebe Professor of Philosophy of Religion at Trinity College University of Toronto has spent much of his academic career arguing for a clear demarcation between Theology and Religious Studies The Science of Religion A Defence offers a brilliant overview of Professor Wiebe's contributions on methodology in the academic study of religion of the development of his thinking over time and of his intellectual commitment to a science of religion The work is divided into three parts The first part identifies pertinent connections between religion religious studies and science and why reductionism in the academic study of religion when properly applied can bridge the explanatory gap between the sceptic and the devotee The second part treats conceptual debates in the academic study of religion with particular reference to the place of belief understanding and meaning in the modern study of religion The third part addresses the theological resistance to the scientific study of religion and how that resistance can be overcome Finally two new essays are included a critique on The Preconceptions of a Science of Religion by Anthony J Palma and an accompanying reply by Donald Wiebe The Science of Religion A Defence is an essential resource for both scholarly and non scholarly audiences alike and will be of particular interest to both defenders and critics of a scientific study of religion
