Directions and Trends in Parenting Research Nicolette Vanessa Roman,Yosi Yaffe,Dorit Alt,2024-08-28 For many decades parenting has been at the center of interest for practitioners and researchers interested in child social and psychological development The body of research on children s socialization has primarily focused on traditional parenting styles and their related practices in the spirit of Baumrind s and others conceptualization of parental control and power assertion e g authoritative authoritarian and permissive This research has revealed many domains of children s and adolescents adjustment and wellbeing that are affected by and affecting parenting quality but intriguing new parental approaches and types have recently emerged in research literature such as digital parenting transcendent parenting parental alienation overparenting helicopter parenting tiger parenting and several others about which more is yet to be learned Likewise in recent years our understanding of the role played by factors such as culture ethnicity environmental and familial background in the relationship between parenting styles and children s psychological wellbeing and mental health has greatly improved However the question of whether or not there is a global uniform optimal parenting remains controversial as more studies are required to better understand the varying impacts of parenting on the child s well being within different demographic and familial contexts This is especially true for families with special needs children i e children and adolescents with developmental and psychological disabilities where research on parenting styles in particular is understudied Additionally in the present digital era there is growing interest in relatively new behavioral outcomes in children and adolescents such as sedentary behaviors including eating and nutrition habits online behaviors and digital activity vs physical activity These and other important contemporary aspects in children s functioning and behaviors contribute to developmental mental health and further establishing our knowledge regarding the parental role in these contexts is essential

Innovations in Research and Practice of Family Based Treatment for Eating Disorders James Lock, Daniel Le Grange, Jennifer Couturier, Dasha Elizabeth Nicholls, 2021-02-26 Handbook of Social Support and the Family Gregory R. Pierce, I.G. Sarason, 2013-06-29 While insights sometimes are slow in coming they often seem obvious when they finally arrive This handbook is an outcome of the insight that the topics of social support and the family are very closely linked Obvious as this might seem the fact remains that the literatures dealing with social support and the family have been deceptively separate and distinct For example work on social support began in the 1970s with the accumulation of evidence that social ties and social integration play important roles in health and personal adjustment Even though family members are often the key social supporters of individuals relatively little research of social support was targeted on family interactions as a path to specifying supporter processes It is now recognized that one of the most important features of the family is its role in providing the individual with a source of support and acceptance Fortunately in recent years the distinctness and

separateness of the fields of social support and the family have blurred This handbook provides the first collation and integration of social support and family research This integration calls for specifying processes such as the cognitions associated with poor support availability and unrewarding family constellations and factors such as cultural differences in family life and support provision that are pertinent to integration

Handbook of Work-Family Integration Karen Korabik, Donna S. Lero, Denise L. Whitehead, 2011-04-28 In today's industrialized societies the majority of parents work full time while caring for and raising their children and managing household upkeep trying to keep a precarious balance of fulfilling multiple roles as parent worker friend child Increasingly demands of the workplace such as early or late hours travel commute relocation etc conflict with the needs of being a parent At the same time it is through work that people increasingly define their identity and self worth and which provides the opportunity for personal growth interaction with friends and colleagues and which provides the income and benefits on which the family subsists The interface between work and family is an area of increasing research in terms of understanding stress job burn out self esteem gender roles parenting behaviors and how each facet affects the others The research in this area has been widely scattered in journals in psychology family studies business sociology health and economics and presented in diverse conferences e g APA SIOP Academy of Management It is difficult for experts in the field to keep up with everything they need to know with the information dispersed This Handbook will fill this gap by synthesizing theory research policy and workplace practice organizational policy issues in one place The book will be useful as a reference for researchers in the area as a guide to practitioners and policy makers and as a resource for teaching in both undergraduate and graduate courses
