Secure Data Provenance and Inference Control with Semantic Web Bhavani Thuraisingham, Tyrone Cadenhead, Murat Kantarcioglu, Vaibhav Khadilkar, 2014-08-01 With an ever increasing amount of information on the web, it is critical to understand the pedigree, quality, and accuracy of your data. Using provenance, you can ascertain the quality of data based on its ancestral data and derivations, track back to sources of errors, allow automatic re-enactment of derivations to update data, and provide attribution of the data source. Secure Data Provenance and Inference Control with Semantic Web supplies step-by-step instructions on how to secure the provenance of your data to make sure it is safe from inference attacks. It details the design and implementation of a policy engine for provenance of data and presents case studies that illustrate solutions in a typical distributed health care system for hospitals. Although the case studies describe solutions in the health care domain, you can easily apply the methods presented in the book to a range of other domains. The book describes the design and implementation of a policy engine for provenance and demonstrates the use of Semantic Web technologies and cloud computing technologies to enhance the scalability of solutions. It covers Semantic Web technologies for the representation and reasoning of the provenance of the data and provides a unifying framework for securing provenance that can help to address the various criteria of your information systems. Illustrating key concepts and practical techniques, the book considers cloud computing technologies that can enhance the scalability of solutions. After reading this book, you will be better prepared to keep up with the on-going development of the prototypes, products, tools, and standards for secure data management, secure Semantic Web, secure web services, and secure cloud computing.

Conditional and Typed Rewriting Systems Stéphane Kaplan, 1991-08-07 In recent years, extensions of rewriting techniques that go beyond the traditional untyped algebraic rewriting framework have been investigated and developed. Among these extensions, conditional and typed systems are particularly important, as are higher-order systems, graph rewriting systems, etc. The international CTRS Conditional and Typed Rewriting Systems workshops are intended to offer a forum for researchers on such extensions of rewriting techniques. This volume presents the proceedings of the second CTRS workshop, which contributed to discussion and evaluation of new directions of research. The proceedings of the first CTRS workshop are in Lecture Notes in Computer Science Vol. 308. Several important directions for extensions of rewriting

techniques were stressed which are reflected in the organization of the chapters in this volume Theory of conditional and Horn clause systems Infinite terms non terminating systems and termination Extension of Knuth Bendix completion Combined systems combined languages and modularity Architecture compilers and parallel computation Basic frameworks for typed and order sorted systems Extension of unification and narrowing techniques Intelligent Techniques for Planning Ioannis Vlahavas,Dimitris Vrakas,2005-01-01 The Intelligent Techniques for Planning presents a number of modern approaches to the area of automated planning These approaches combine methods from classical planning such as the construction of graphs and the use of domain independent heuristics with techniques from other areas of artificial intelligence This book discusses in detail a number of state of the art planning systems that utilize constraint satisfaction techniques in order to deal with time and resources machine learning in order to utilize experience drawn from past runs methods from knowledge systems for more expressive representation of knowledge and ideas from other areas such as Intelligent Agents Apart from the thorough analysis and implementation details each chapter of the book also provides extensive background information about its subject and presents and comments on similar approaches done in the past
