development to mention just a few It all began when I had given a presentation at the ASCD convention addressing over 500 educators following a nine year study on inquiry and cognitive centered teaching funded by The Ford Foundation and now found myself mobbed by publishers to PUT IT IN A BOOK The book was written in ten weeks and it sold and sold and sold one hundred thousand copies and was translated into many foreign languages This resulted in teaching pupils at all grade levels to process information to develop conceptual frameworks and in depth understanding of the content in all disciplines be it mathematics the sciences the social science music and the arts Learners developed and grew concepts and conceptual frameworks and really understood the material as opposed to mouthing memorized sequences of words Let me show you what I am trying to convey I visited a first grade class and there they were singing praises to TWO chanting One and One is TWO Then it happened One little boy raised his hand and blurted out What s a two We live in a conceptual world Whether we are teaching kindergarten children their ABCs or graduate students advanced mathematics we must teach so that they truly understand what they are talking about so that they can develop concepts simple concepts first and then more intricate concepts That my friends is what learning is all about My career has spanned over sixty years spent examining researching developing writing and teaching various methods teachers can use to educate our children more effectively So here it is an updated version of the original book designed for the digital age and our digital destiny providing our new generation with the critical cognitive skills to deal with a very challenging future The processes and strategies are clearly delineated and applicable to every discipline at every level of instruction These have been researched and evaluated In sum the world has become far more complex than any of us as educators could have envisioned We are being deluged with the new the unknown We will need thinkers and problem solvers Teach them all to think Need I say more **Peers Helping Peers**

be articulated from previous research and planning and designed sequentially to promote real and interesting learning scenarios and thereby achieve significant learning. From this perspective of teaching learning strategies, the reciprocal interaction between the student and the teacher becomes the focus of attention with a playful, motivating, interesting, and rewarding approach for the learner. The role of the teacher is conceived as fundamental in the teaching process to achieve the link between teaching learning and evaluation strategies.
