Mammerickx, 1986-12-31 This volume on enzootic bovine leukosis EBL and bovine leukemia virus BLV is the second in our series *Developments in Veterinary Virology* Each book in this series is devoted to a major virus disease of agricultural significance The chapters in each volume are planned to supply information on a range of subjects from pathogenesis of the causative virus to vaccination eradication and rules regarding disease control The present volume on enzootic bovine leukosis and bovine leukemia virus updates the reader on the disease and its causative agent and includes the nucleotide sequence of the BLV genome as well as data on its integration into the DNA of the tumor cell Insights into diagnosis veterinary legislation and the economic aspects of EBL are also provided Intense research conducted on EBL and BLV during the course of a decade is presented in a most concise and in depth manner so as to provide the reader with a comprehensive overview of this economically important disease of cattle I wish to thank the editors A Burny and M Mammerickx as well as all the authors for making this excellent book available at a stage when the knowledge on bovine leukemia virus will also contribute to our understanding of the virus causing human AIDS

Possible Correlation Between Replication of Bovine Leukemia Virus and Enzootic Bovine Leukosis P. Venber, 1981

The Role of Bovine Leukemia Virus in the Establishment of Enzootic Bovine Leukosis Joel Rovnak, 1999 **Proceedings of Bovine Leukosis Symposium, May 22-23, 1979 at the University of Maryland, College Park, Md**, 1979 *Fourth International Symposium on Bovine Leukosis* O.C. Straub, 1982-01-01 The series of international symposia on Enzootic Bovine Leukosis EBL sponsored by the Commission of the European Communities began in 1975 in Copenhagen This latest symposium the third was held in Bologna 5-7 November 1980 If we compare the two proceedings it is quite evident how much progress has been achieved in EBL research during these few years Whereas in 1975 there were still discussions on the characterisation and importance of the various identified antigens and the antibodies against them we now have evidence of base sequence variations of the bovine leukosis provirus derived from cattle in different continents due to the world wide cooperation on the subject Disease control was still largely based on haematology whereas now some countries are completely free or on the verge of becoming completely free of the disease following the introduction of serological methods of diagnosis EBL research appears to me to be an excellent example of the production of new fundamental research and its transfer to the applied disciplines of veterinary sciences I must emphasise that this progress would not have been achieved if the CEC had not sponsored a number of projects and the meetings I should like to thank the CEC for this continued sponsorship Prof Dr Gentile whose invaluable assistance helped to ensure the quality of the symposium and Janssen Services for their work in preparing the proceedings and assistance with the editing of the papers and discussion
