Enzymatic Basis of Detoxication Volume 2 William B. Jakoby, 2012-12-02 *Enzymatic Basis of Detoxication Volume II* reviews the state of knowledge on foreign compound metabolism at the level of what specific enzymes can do. The book attempts to provide a holistic view of the information gleaned from work with specific purified enzymes encompassing as many mammalian sources as have been studied. The book is organized into two parts. Part I on conjugation reactions and related systems includes studies on the properties of glucuronide formation, the physiological function assay and purification of function of bilirubin glucuronoside glucuronosyltransferase, the roles of N and O methylation reactions and glutathione transferases in detoxication and amino acid conjugation. Part II presents studies on hydrolytic systems covering the role of epoxide hydrolase, carboxylesterases and amidases in detoxication and the regulatory effects of these enzymes. This book provides pharmacologists and toxicologists with the biochemical view of detoxication and biochemists with the corresponding pharmacological and toxicological aspects. *Enzymatic Basis of Detoxication Volume 1* William B. Jakoby, 2012-12-02

Enzymatic Basis of Detoxication Volume I focuses on the catalytic mechanisms and physiological expression of the enzymes that are involved in the detoxication of foreign compounds. The book explores foreign compound metabolism at the level of what specific enzymes can do. This book is organized into three sections and comprised of 17 chapters. The discussion begins with an overview of detoxication and covers both catalytic and non catalytic removal of foreign substances along with the general properties of the enzymes that are active in detoxication. The reader is then introduced to the physiological aspects of detoxication paying particular attention to the kinetic aspects of metabolism and elimination of foreign compounds in animals, human genetic variation in detoxication enzymes and how such enzymes are induced. The next section focuses on mixed function oxygenase systems and includes chapters on cytochrome P 450 and the detoxication reactions it catalyzes. The book also considers other oxidation reduction systems with reference to alcohol dehydrogenase, aldehyde reductase, aldehyde oxidizing enzymes, ketone reductases, xanthine oxidase and aldehyde oxidase, glutathione peroxidase and superoxide dismutases. The final chapter is devoted to monoamine oxidase, its properties, substrate specificity, inhibitors, kinetics and mechanism and multiple forms. Pharmacologists, toxicologists and biochemists will find this book extremely helpful.

Patty's Toxicology, 6 Volume Set Eula Bingham, Barbara Cohrssen, 2012-07-31 Featuring the improved format used in the 5th edition, this updated set presents in logical groupings comprehensive toxicological data for industrial compounds including CAS numbers, physical and chemical properties, exposure limits and biological tolerance values for occupational exposures, making it essential for toxicologists and industrial hygienists. This edition has about 40% new authors who have brought a new and international perspective to interpreting industrial toxicology and discusses new subjects such as nanotechnology, flavorings and the food industry, reactive chemical control to comprehensive chemical policy, metalworking fluids and pharmaceuticals. **Enzymatic Basis Detoxication 2 Vol Set** Elsevier Science & Technology Books, 1980-12-01

Cohen, 2022-07-30 First published in 1986 The purpose of this 2 volume set is to provide a valuable reference for established investigators and postgraduate students in toxicology **Endogenous Toxins, 2 Volume Set** Peter J. O'Brien, William Robert Bruce, 2009-12-02 Designed as a first stop reference for researchers and professionals in toxicology pharmacology and medicine this handbook is the very first to tie together the knowledge from many disciplines that has so far been available only from widely dispersed sources in the primary literature As such it presents the complete picture on what is currently known about endogenous toxins including their generation mode of action resulting disease condition and available countermeasures Clearly divided into four parts the first systematically covers important toxic molecule species including metabolic intermediates and reactive oxygen species The second discusses the role of genetically determined metabolic malfunctions such as galactosemia hyperlipidemia porphyria hemochromatosis and related conditions while part three looks at acquired and chronic diseases caused or exacerbated by endogenous toxins such as hepatic injury asthma rheumatism colorectal cancer reperfusion diseases neurodegeneration and aging The final part reviews current strategies to control and minimize the effect of endogenous toxins either by nutritional or pharmacological interventions With its complete coverage integrating molecular and systemic aspects from the biochemical basis to human disease conditions this comprehensive reference will appeal to a broad target group of toxicologists biochemists nutrition specialists and physicians *Biological Basis of Detoxication* John Caldwell, 2012-12-02 Biological Basis of Detoxication focuses on the biological processes involved in detoxication with emphasis on the biochemistry of the removal of xenobiotics from an organism Topics range from the formation of toxic metabolites and compounds that are not metabolized at all to the tissue distribution and nutritional considerations the kinetics and mechanisms of the metabolic and excretory processes and the integration of xenobiotic metabolism in the activation and detoxication of carcinogens Organized into 14 chapters this book begins with an overview of the enzymatic basis for the metabolic activation of foreign compounds in forming reactive chemical intermediates The first few chapters discuss the identification of reactive electrophiles derived from xenobiotics intratissue distribution of activating and detoxicating enzymes enzymatic and non enzymatic modes of xenobiotic metabolism and unmetabolized compounds The middle chapters explore the biological basis of detoxication of oxygen free radicals physiologic and kinetic aspects of the fate of xenobiotics excretion of xenobiotics and effects of nutrition on detoxication The remaining chapters look at the relationships between the enzymes of detoxication and host defense mechanisms metabolic basis of target organ toxicity the enzymatic factor in selective toxicity and intraindividual and interindividual variations in rates of hepatic metabolism of exogenous chemicals Pharmacologists toxicologists and biochemists will find this book highly informative Target Organ Toxicity, Volume I Gerald M. Cohen, 2020-01-29 This two volume set provides essential information on the general principles of target organ toxicity Pharmacokinetics metabolic activation and key defense mechanisms excretion species variation and tissue specific biochemistry are explored comprehensively These general

Langenbach, 2013-11-21 The Symposium on Organ and Species Specificity in Chemical Carcinogenesis was held March 1981 in Raleigh North Carolina Dr James Miller concluded this Symposium with these remarks Without a doubt all of us would agree this has been a very successful symposium in illustrating a very wide range of chemical stereochemical biochemical metabolic molecular and biological factors in chemical carcinogenesis I think it is noteworthy that many of the discussions

have dealt with pharmacodynamic or toxicodynamic factors that can influence the biological activities of the extremely wide range of structures that we choose to call chemical carcinogens I sincerely hope that after this symposium everyone here will realize the very great need we have for further information on these agents in the species we profess to be working for the human species We badly need an adequate data base on human organs human tissues human cells human subcellular preparations and human body fluids I don't think we can rely on extrapolations of data on chemical carcinogenesis from experimental animals to humans no matter how sophisticated or plausible these extrapolations may seem until we know far more about chemical carcinogenesis in humans Now I'd like to add a somewhat personal note As many of you know my wife and I have shared a joint career of some 40 years in this field and I'd like to emphasize in these closing remarks the factor of youth
