Modulation of Cellular Responses in Toxicity Corrado L. Galli, Marina Marinovich, Alan M. Goldberg, 2013-06-29

Proceedings of the NATO Advanced Study Institute on the Modulation of Cellular Response in Toxicity held in Ponte di Legno Italy January 24 February 3 1994 **Environmental Chemicals, Enzyme Function and Human Disease** David Evered, GERALYN LAWRENSON, 2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **The Modulation of Phase I and II Metabolizing Enzymes by Genistein, Daidzein, and Equol in Animal and Cell Culture Models** Erik Brandon Froyen, 2008 **NaCl Transport in Epithelia** R. Greger, 2012-12-06 After the pioneering studies by Ussing and co workers studies of epithelial Na⁺ transport have come a long way The first phase of the phenomenological description of the cell as a black box has been followed by studies of cellular mechanisms the interplay of the different transport components and the mechanisms of regulation A broad spectrum of methods has been applied to many epithelia in a variety of species For the individual epithelia transport schemes have been proposed and at this point I think it is appropriate to take a pause and search for elements common to several epithelia This aspect triggered the publication of this book and in fact the various chapters emphasize that the functional components expressed in the various epithelia are not infinite in number but they occur in epithelia which are separated in evolution by several hundred million years The authors come both from the field of veterinary and human physiology as well as from biology In my opinion the close contacts and collaborations between physiologists and biologists have been essential for the progress in this field I wish to thank all authors for their contributions and I hope that the reader will appreciate this collection of up to date reviews on epithelia in nonvertebrates and vertebrates *Gut Microbiota, Immunity, and Health in Production Animals* Michael H. Kogut, Glenn Zhang, 2022-01-19 This work sheds new light on the interplay between the gut microbiota and host physiological processes in production animals The gut microbiome shapes health and susceptibility to disease and has become a leading area of research in the animal sciences Gut health encompasses a number of physiological and functional features Nutrient digestion and absorption host metabolism and energy generation a stable microbiome mucus layer development barrier function and mucosal immune responses all of which are required to interact to make an animal perform physiologically and according to its greatest genetic potential This carefully presented book broadens our vision approach and results on gut health and the ability to regulate animal production Understanding the chemistry of microbiomes has broad implications including providing functional annotations for the microbial genomes insights into the chemical languages that link microbes to each other and to their host and translational implications for precision veterinary medicine environmental health and sustainable animal agriculture and welfare Experts working in microbiome research host immunity and animal production veterinarians and researchers in livestock science will understand the great importance of this volume **Cancer Chemoprevention** Gary J. Epigenetics and Cancer Fazlul H. Sarkar, 2013-05-29 Overall this book illustrates the complexities of the regulation and deregulation of genes mediated through epigenetics in the development and progression of human malignancies All the articles have been carefully chosen to represent several cancer systems with state of our knowledge on the role of epigenetic deregulation of microRNAs miRNAs and their target mRNAs along with epigenetic deregulation of mRNAs This book also illustrates the role of several dietary agents collectively called nutraceuticals or natural agents in modulating the epigenetic reprogramming of miRNAs and mRNAs for the prevention and or treatment of human malignancies It is well known that genetic aberrations especially inherited through parents somatic genetic alterations contribute to the development of less than 10% of all cancer yet epigenetic alterations in genes especially through selective methylation and acetylation appears to be responsible for the development and progression of the vast majority of all cancers Therefore understanding the role of epigenetics in the regulation of genes especially through deregulated expression of miRNAs as presented in this book will allow scientists to devise targeted therapeutic strategies for re expression of the lost genes or down regulate the genes that are over expressed in order to eradicate cancer It is hoped that targeting epigenetics will not only target cancer cells but it will also target the tumor microenvironment more like the entire tumor environment such as the entire host for achieving better treatment outcomes for patients diagnosed with cancer which will lead to achieve the long term objective for complete eradication of cancer This book contains fifteen chapters which begins with the concept of systems and network biology for investigating the epigenetics of cancer followed by a series of articles on the role of miRNAs and their target genes in the biology of pancreatic cancer and other cancers such as breast kidney prostate and and colon Since it is becoming increasingly clear that cancer stem cells CSCs are important in the development and progression of cancer and CSCs are

important in therapeutic resistance treatment failure and tumor recurrence thus the importance of CSCs and epigenetics has been highlighted by a very timely article on epigenetic variations of stem cell markers in cancer including miRNAs Moreover just targeting heterogeneous cancer cell populations may not be optimal to eradicate tumors and for which one must take a holistic approach for developing drugs that could also target the tumor microenvironment and tumor dormancy that are regulated through epigenetics Keeping abreast with this thought process the concluding chapter provides a concept towards curative cancer therapy with maspin which could be a unique window of opportunity to target tumor dormancy Therefore it suggest that targeting the tumor dormancy and the tumor microenvironment using novel therapeutics specifically by targeting epigenetics would become the future of medicine
