Enzymes In The Environment Activity Ecology And Applications:

Enzymes in the Environment Richard G. Burns, Richard P. Dick, 2002-01-29 The need to understand the biological processes that are important for essential aquatic and terrestrial ecosystem function has prompted much research into the field of ecological enzymology This book presents the two broad areas of application in a compilation of reviews by 21 international experts in their respective fields The first explores enzymatic activities to assess the processes or mechanisms that operate in a given system such as the rhizosphere plant leaves and shoots soil surfaces and biofilms The second considers enzymes or microbial cells as sensors to detect microbial activity and stresses due to pollution management or climatic change in both aquatic and terrestrial ecosystems *Enzymes in the Environment: Activity, Ecology and Applications*, 2004 **Enzymes in the Environment: Activity, Ecology and Applications**, 2004 International Conference Enzymes in the Environment: Activity, Ecology, and Applications Richard G. Burns, 2000 **Soil Enzymology** Girish Shukla, Ajit Varma, 2010-10-17 Soil enzymes are one of the vital key mediators involved in nutrient recycling and the decomposition of organic matter and thereby in maintaining soil quality and fertility This Soil Biology volume covers the various facets of soil enzymes such as their functions biochemical and microbiological properties and the factors affecting their activities Enzymes in the rhizosphere in forest soils and in volcanic ash derived soils are described Soil enzymes covered include phosphohydrolases lignocellulose degrading enzymes phenol oxidases fungal oxidoreductases keratinases pectinases xylanases lipases and pectinases Several chapters treat the soil enzymatic activities in the bioremediation of soils contaminated with pesticides and pollutants such as oil chlorinated compounds synthetic dyes and aromatic hydrocarbons The role of soil enzymes as bioindicators is a further important topic addressed Carbon Sequestration in Agricultural Soils Alessandro Piccolo, 2012-01-13 This compilation of techniques methodologies and scientific data arises from a four year Italian research project which took place at university research stations in Turin Piacenza Naples and Potenza Soil Organic Matter SOM represents an active and essential pool of the total organic carbon on the planet Consequently even small changes in this SOM carbon pool may have a significant impact on the concentration of atmospheric CO₂ Recent new understanding of the chemical nature of SOM indicates that innovative and sustainable technologies may be applied to sequester carbon in agricultural soils Overall results of the project have been applied to develop an innovative model for the prediction and description both quantitatively and qualitatively of carbon sequestration in agricultural soils This book provides experts in different areas of soil science with a complete picture of the effects of new soil management methods and their potentials for practical application in farm management *Biodiversity In Agricultural Production Systems* Gero Benckiser, Sylvia Schnell, 2006-07-19 While modern science has always recognized the central role that biodiversity plays in the ecological processes that maintain the Earth's equilibrium our increasing knowledge of nature has deepened our appreciation of this principle Consequently those involved with implementing and maintaining sustainable agriculture

systems have begun to take a far more sophisticated approach to understanding and making use of the components and mechanics of biodiversity Providing a comprehensive and highly practical exploration of the subject Biodiversity in Agricultural Production Systems examines abiotic ecosystem diversity and biological complexity at every relevant level Leading researchers detail subspecies diversity covering ecotypes lifecycles genes physiology and behavior They also discuss species richness and supraspecies diversity which includes foodweb interactions and non trophic relationships as well as above and belowground relationships Exploring various facets of agricultural crops and cultivation practices this interdisciplinary volume Gives an overview of the pore space dynamic in agroecosystems where most soil microorganisms reside including bacteria fungi protozoa nematodes and Tardigrada Examines the highly diverse and prominent role played by earthworms Looks at the metabolic processes occurring in soils that result in the release of greenhouse gases Outlines principles and strategies of order between interacting molecules cells species and communities Looks at mechanisms of competition exploring growth regulation transformation and feeding strategies as well as toxin production mutation and biofilm formation Discusses matter recycling and the diversity of microbial metabolism in soils Shows how long term observation plots are used to assess soil quality Biodiversity in Agricultural Production Systems provides important information for those involved with researching and implementing sustainable agricultural systems as well as those addressing specific challenges related to soil degradation water management and climatic impacts It also provides recent research and fresh perspectives to enhance the approaches of those working in horticulture biology and the environmental sciences
