Puranik,2025-07-12 This book explores the role of proteostasis in neurodegenerative disorders focusing on protein homeostasis in long lived nondividing cells like neurons It examines how disruptions in proteostasis influenced by factors such as oxidative stress aging and environmental stress contribute to diseases like Alzheimer s Parkinson s and amyotrophic lateral sclerosis The book begins with an overview of the epidemiology and management of neurodegenerative diseases Subsequent chapters delve into the mechanisms governing proteostasis highlighting the ubiquitin proteasome system molecular chaperones and co chaperones in protein folding and degradation It further explores how impairments in these pathways contribute to neuroinflammation and disease progression By providing insights into these cellular processes the book aims to enhance understanding and support the development of potential therapeutic strategies Neuroepidemiology,2016-09-13 Neuroepidemiology covers the foundations of neuroepidemiological research and the epidemiology of disorders primarily affecting the nervous system as well as those originating outside the nervous system The etiology of many important central nervous system disorders remains elusive Even with diseases where the key risk determinants have been identified better prevention and therapy is needed to reduce high incidence and mortality Although evolving technologies for studying disease provide opportunities for such it is essential for researchers and clinicians to understand how best to apply such technology in the context of carefully characterized patient populations By paying special attention to methodological approaches this volume prepares new investigators from a variety of disciplines to conduct epidemiological studies in order to discern the etiologic factors and underlying mechanisms that influence the onset progression and recurrence of CNS disorders and diseases The book also provides current information on methodological approaches for clinical neurologists seeking to expand their knowledge in research Includes coverage of the foundations of neuroepidemiological research and the epidemiology of disorders primarily affecting the nervous system as well as those originating outside the nervous system Describes the most recent methodologies to define and quantify the burden of CNS disorders and to understand the underlying mechanisms with neuroimaging and molecular methods receiving particular emphasis Offers extensive description of those neurological conditions that are secondary to other diseases whose incidence is on the rise because of
