Anderson, 2013-11-22 Since the beginning of this century there has been a growing interest in the study of the epidemiology and population dynamics of infectious disease agents Mathematical and statistical methods have played an important role in the development of this field and a large and sophisticated literature exists which is concerned with the theory of epidemiological processes in populations and the dynamics of epidemic and endemic disease phenomena Much of this literature is however rather formal and abstract in character and the field has tended to become rather detached from its empirical base Relatively little of the literature for example deals with the practical issues which are of major concern to public health workers Encouragingly in recent years there are signs of an increased awareness amongst theoreticians of the need to confront predictions with observed epidemiological trends and to pay close attention to the biological details of the interaction between host and disease agent This trend has in part been stimulated by the early work of Ross and Macdonald on the transmission dynamics of tropical parasitic infections but a further impetus has been the recent advances made by ecologists in blending theory and observation in the study of plant and animal populations **Health and disease in tropical Africa** Akhtar R, 1987-01-31 **Demography and Vector-Borne Diseases** Michael W. Service, 2024-11-01 An in depth overview on the demographic changes occurring world wide and the repercussions this is having on the pattern of vector borne disease is presented in this book Internationally recognized scientists epidemiologists entomologists parasitologists and ecologists are contributing authors to this comprehensive account Water and Human Health Frederick Eugene McJunkin, 1983 International Health Planning Reference Series, 1979 Safe Drinking Water Act Amendments of 1983 United States. comprehensively covering the scope methods and practice of the discipline *New Topics in Tuberculosis Research* Donald D. Spiegelburg, 2007 Tuberculosis the disease that the World Health Organization has recently declared a global emergency was supposedly defeated by antibiotics half a century ago It has returned in a highly contagious and fatal new form that cannot be treated with conventional drugs Multidrug resistant TB MDR TB could cause some 10 million deaths over the next decade and is thriving in the overcrowded prisons of the former Soviet Union The virtual collapse of the world's borders means that refugees tourists immigrants business travellers and others can spread the TB bacillus very efficiently London for example has experienced a 100 per cent increase in reported cases in the past 10 years This book covers all aspects of the disease epidemiology microbiology diagnosis treatment control and prevention Leading research is presented from centres around the world The economics of biological invasions Charles Perrings, Silvana Dalmazzone, Mark Herbert Williamson, 2000 An interesting book catering perhaps for a more specific audience It does however provide a somewhat new view of the problems of the field of biological invasions and is worth the effort Ann Sundqvist M2 Best Books Once again Charles Perrings and colleagues have broken new ground by applying economic and ecological analysis to the very real problem of biological invasions This is path breaking work in what promises to be a new sub discipline within environmental economics David Pearce University College London UK Biological invasions the introduction of living organisms beyond their original range are one of the main drivers of biodiversity loss They are a major threat to human health and a source of pests and pathogens in the world's farms forests and fisheries The growth of international trade and travel means that more species are being introduced to more places than ever before This book represents the first concerted effort to understand the economic causes and consequences of biological invasions The volume discusses the theoretical and methodological issues raised by invasion including control strategies modelling options and a study of the economic institutional and policy conditions that predispose countries to biological invasions Also included are case studies of fisheries agricultural systems tropical forests and protected areas affected by invasive species in locations such as the Black Sea Australia and Africa and an evaluation of control programmes Filariasis David Evered, Sarah Clark, 2008-04-30 Filarial parasites affect over 130 million people in tropical and subtropical regions of the world causing prolonged and debilitating illnesses ranging from lymphatic inflammation and elephantiasis to skin disease and blindness This wide ranging book the outcome of an international symposium focuses on the host parasite interaction in lymphatic filariasis and onchocerciasis Papers examine all aspects of the pathological and immunological consequences of infection as well as diagnosis treatment and control of filarial disease **Disease in Wild Animals** Gary A. Wobeser, 2007-04-03 This book arose out of teaching graduate and undergraduate classes in wildlife diseases It in some ways chronicles my involvement in the investigation and diagnosis of diseases in free ranging wildlife primarily in western and northern Canada since the 1960s It also perhaps reflects the development of wildlife disease study as a discipline Much of the earlier work in this field was purely descriptive documenting the

occurrence of various diseases in wild animals I have chosen to retain references to some older and obscure information in this second edition because this body of work provides the foundation for a more analytical approach The literature on health problems in free ranging animals is expanding rapidly I am gratified that the theoretical and quantitative aspects of wildlife disease are receiving more attention than in the past and that role of disease as a factor in population biology is being analyzed My hope for the first edition of this book was that it would serve as an overview of the study of disease in wild animals and of methods that might be used to manage health problem It was and is not intended to be a how to book or an encyclopedic reference to the literature on disease rather it is intended as a seed crystal around which the reader can build The inquiries I have received about a second edition suggest that it has been useful

Disability and Rehabilitation in

Rural Jamaica Ronnie Linda Leavitt,1992 Although negative conditions exist it appears that disabled children are not particularly stigmatized at the household level Nevertheless societal stigmatization and apathy do exist As a result disabled children are not being prepared to fully integrate into Jamaican society 2 There is a range of variation of beliefs and behaviors with regard to disability and rehabilitation The concept of intracultural diversity is supported 3 This population has adapted their cultural belief systems and actual behaviors to match their material realities That is it would appear that people who have a disability and their caretakers have demonstrated contextual accommodation 4 Community based rehabilitation programs based on the primary health care and community participation principles enumerated by the WHO are theoretically sound and practically attainable in Jamaica
