A Complex Systems Approach to Epilepsy Rod C. Scott, J. Matthew Mahoney, 2023-01-26 The epilepsies are devastating neurological disorders for which progress developing effective new therapies has slowed over recent decades primarily due to the complexity of the brain at all scales This reality has shifted the focus of experimental and clinical practice toward complex systems approaches to overcoming current barriers Organized by scale from genes to whole brain the chapters of this book survey the theoretical underpinnings and use of network and dynamical systems approaches to interpreting and modeling experimental and clinical data in epilepsy The emphasis throughout is on the value of the non trivial and often counterintuitive properties of complex systems and how to leverage these properties to elaborate mechanisms of epilepsy and develop new therapies In this essential book readers will learn key concepts of complex systems theory applied across multiple scales and how each of these scales connects to epilepsy [Indexes to the Epilepsy Accessions of the Epilepsy Information System](#) J. Kiffin Penry, 1978

Quality of Life in Epilepsy Gus A Baker, Gus A. Baker, Ann Jacoby, 2013-05-13 Though clinical aspects of epilepsy such as seizure control are crucially important to its management increasing attention is being given to wider quality of life issues Epilepsy continues to be an often misunderstood and stigmatising condition for the vast majority of people whose seizures can be well controlled the social and psychological repercussions are often of greater significance than the seizures themselves The increasing emphasis on the importance of non clinical outcomes in the assessment of new treatments and management strategies for chronic conditions such as epilepsy has stimulated interest in methodological issues in assessing quality of life This book reviews the recent literature on the impact of epilepsy on everyday experience and the methodological issues involved in assessing that impact It also considers the perspectives of a range of health professionals involved in caring for people with epilepsy and how through appropriate management the impact on their lives can be minimised

Evidence-based Management of Epilepsy Steven C Schachter, 2011-09-01 The clinical management of patients with epilepsy and the associated medical literature are rapidly evolving Evidence based Management of Epilepsy differs from other epilepsy textbooks by focusing specifically on topics where the available evidence is sufficiently well developed to be synthesized into straightforward summaries of proven therapies When evidence is missing or there is doubt controversy or ambiguity the distinguished authors offer treatment recommendations based on practice guidelines or consensus statements that span the gaps in evidence while pointing to those areas where further research is needed The initial chapters cover critically important aspects of antiepileptic drugs AEDs and surgical treatment such as when to start and stop AEDs how to monitor their effectiveness special considerations in women who become pregnant and when to

consider surgery to alleviate seizures The following chapters cover the therapy of seizures when they develop after traumatic brain injury or stroke and the treatment of concomitant depression and anxiety in patients with epilepsy The final chapters discuss emerging topics in epilepsy the treatment of the postictal state technologies to predict and detect seizures strategies for closing the treatment gap and sudden unexpected death in epilepsy The contributors are renowned experts in their fields who successfully and succinctly present state of the art reviews based on the medical evidence designed to help the clinician be as best informed as possible in the care of patients with epilepsy *Epilepsy: A Comprehensive Textbook* Jerome Engel Jr, Solomon L. Moshé, 2023-10-23 Authoritative and updated Epilepsy A Comprehensive Textbook 3rd Edition contains 365 chapters that cover the full spectrum of relevant topics in biology physiology and clinical information from molecular biology to public health concerns in developing countries Written by world renowned authorities and expertly edited by epileptologists Drs Jerome Engel Jr Solomon L Moshé Aristea S Galanopoulou John M Stern Alexis Arzimanoglou Jacqueline A French Renzo Guerrini Andres M Kanner and Istvan Mody this three volume work includes detailed discussions of seizure types and epilepsy syndromes relationships between physiology and clinical events psychiatric and medical comorbidities conditions that could be mistaken for epilepsy and an increasing range of pharmacologic surgical and alternative therapies

Wieser, Christian E. Elger, 2012-12-06 From the 12th to the 15th September 1985 the International Symposium on Methods of Presurgical Evaluation of Epileptic Patients Basics Techniques and Implications for Epileptology and Surgical Epilepsy Therapy was held in Zurich This symposium was a consequence of the increasing recognition by Europeans especially from German speaking countries of a growing need for surgical therapy of epileptics The main aim was to provide a venue for critical review and lively discussion of presurgical evaluation protocols with special emphasis on the electrophysiological aspects including invasive techniques To provide a necessary background some basic aspects along with postsurgical results had to be dealt with by leading experts in the different fields of experimental and clinical epileptology and neurosurgery It was intended to be an international but

moderately scaled meeting Finally however in addition to the European contingent there were participants from Australia Brazil Canada Israel Japan Korea and the United States of America including pioneers from the surgically active centers This international discussion was surely facilitated by the close temporal relation ship to the International Congresses XIIIth World Congress of Neurology and XVIth Epilepsy International Congress which took place in Hamburg And probably most important is the fact that the Zurich symposium was dedicated to Prof Rudolf Hess and his lifelong devotion to epilepsy diagnosis and treatment in Switzerland as out lined in the Honorary Address by his eminent colleague and personal friend Prof Henri Gastaut
