Episodes In The Mathematics Of Medieval Islam:

Episodes in the Mathematics of Medieval Islam J.L. Berggren,2014-11-25 This book presents episodes from the mathematics of medieval Islam work which has had a great impact on the development of mathematics The author describes the subject in its proper historical context referring to specific Arabic texts Among the topics discussed are decimal arithmetic plane and spherical trigonometry algebra interpolation and approximation of roots of equations This book should be of great interest to historians of mathematics as well as to students of mathematics The presentation is readily accessible to anyone with a background in high school mathematics   Great Muslim Mathematicians Mohaini Mohamed,2000 This book presents detailed accounts and analysis of the lives and world view of selected mathematicians of the Islamic period their place in the world of science the popularization of their lives and their contributions specifically in mathematics and astronomy   **Handbook of Medieval Studies** Albrecht Classen,2010-11-29 This interdisciplinary handbook provides extensive information about research in medieval studies and its most important results over the last decades The handbook is a reference work which enables the readers to quickly and purposely gain insight into the important research discussions and to inform themselves about the current status of research in the field The handbook consists of four parts The first large section offers articles on all of the main disciplines and discussions of the field The second section presents articles on the key concepts of modern medieval studies and the debates therein The third section is a lexicon of the most important text genres of the Middle Ages The fourth section provides an international bio bibliographical lexicon of the most prominent medievalists in all disciplines A comprehensive bibliography rounds off the compendium The result is a reference work which exhaustively documents the current status of research in medieval studies and brings the disciplines and experts of the field together   **Enfoldment and Infinity** Laura U. Marks,2010-08-13 Tracing the connections both visual and philosophical between new media art and classical Islamic art In both classical Islamic art and contemporary new media art one point can unfold to reveal an entire universe A fourteenth century dome decorated with geometric complexity and a new media work that shapes a dome from programmed beams of light both can inspire feelings of immersion and transcendence In Enfoldment and Infinity Laura Marks traces the strong similarities visual and philosophical between these two kinds of art Her argument is more than metaphorical she shows that the Islamic quality of modern and new media art is a latent deeply enfolded historical inheritance from Islamic art and thought Marks proposes an aesthetics of unfolding and enfolding in which image information and the infinite interact image is an interface to information and information such as computer code or the words of the Qur an is an interface to the infinite After demonstrating historically how Islamic aesthetics traveled into Western art Marks draws explicit parallels between works of classical Islamic art and new media art describing texts that burst into image lines that multiply to form fractal spaces nonorganic life in carpets and algorithms and other shared concepts and images Islamic philosophy she suggests can offer fruitful ways of understanding contemporary art

Companion Encyclopedia of the History and Philosophy of the Mathematical Sciences Ivor Grattan-Guiness,2004-11-11 First published in 2004 This book examines the history and philosophy of the mathematical sciences in a cultural context tracing their evolution from ancient times up to the twentieth century Includes 176 articles contributed by authors of 18 nationalities With a chronological table of main events in the development of mathematics Has a fully integrated index of people events and topics as well as annotated bibliographies of both classic and contemporary sources and provide unique coverage of Ancient and non Western traditions of mathematics Presented in Two Volumes

Companion Encyclopedia of the History and Philosophy of the Mathematical Sciences Ivor Grattan-Guinness,2002-09-11 Examines the history and philosophy of the mathematical sciences in a cultural context tracing their evolution from ancient times up to the twentieth century 176 articles contributed by authors of 18 nationalities Chronological table of main events in the development of mathematics Fully integrated index of people events and topics Annotated bibliographies of both classic and contemporary sources Unique coverage of Ancient and non Western traditions of mathematics The Mathematics of Juggling Burkard Polster,2006-05-26 As a juggler the author likes to finish his performances with a stunt that combines props and techniques from a variety of juggling disciplines Imagine him idling on a giraffe unicycle while balancing a spinning basketball on a mouth stick and toss juggling a sword a toilet plunger and a rubber chicken As a mathematician he is also interested in the treasure trove of beautiful mathematics used to model the different activities in a juggler s repertoire In this book he provides an intellectually stimulating collection of mostly self contained mathematical essays that introduce the reader to many elegant results and techniques from a wide range of mathematical disciplines such as combinatorics graph theory knot theory mechanics differential equations control theory and robotics The Mathematics of Juggling is the first comprehensive account summarizing and expanding the results in the literature on juggling tricks and skills as well as the mathematics behind these tricks and skills Anybody who is not put off by the word mathematics in the title of this book should have a good time reading it **In Synchrony with the Heavens, Volume 1 Call of the Muezzin** David King,2004-02-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices

The Rise of Early Modern Science Toby E. Huff,2017-06-06 Now in its third edition The Rise of Early Modern Science

argues that to understand why modern science arose in the West it is essential to study not only the technical aspects of scientific thought but also the religious legal and institutional arrangements that either opened the doors for enquiry or restricted scientific investigations Toby E Huff explores how the newly invented universities of the twelfth and thirteenth centuries and the European legal revolution created a neutral space that gave birth to the scientific revolution Including expanded comparative analysis of the European Islamic and Chinese legal systems Huff now responds to the debates of the last decade to explain why the Western world was set apart from other civilisations **A History of Mathematics** Luke Hodgkin,2013-02-21 A History of Mathematics From Mesopotamia to Modernity covers the evolution of mathematics through time and across the major Eastern and Western civilizations It begins in Babylon then describes the trials and tribulations of the Greek mathematicians The important and often neglected influence of both Chinese and Islamic mathematics is covered in detail placing the description of early Western mathematics in a global context The book concludes with modern mathematics covering recent developments such as the advent of the computer chaos theory topology mathematical physics and the solution of Fermat s Last Theorem Containing more than 100 illustrations and figures this text aimed at advanced undergraduates and postgraduates addresses the methods and challenges associated with studying the history of mathematics The reader is introduced to the leading figures in the history of mathematics including Archimedes Ptolemy Qin Jiushao al Kashi al Khwarizmi Galileo Newton Leibniz Helmholtz Hilbert Alan Turing and Andrew Wiles and their fields An extensive bibliography with cross references to key texts will provide invaluable resource to students and exercises with solutions will stretch the more advanced reader Faces of Geometry. From Agnesi to Mirzakhani Paola Magnaghi-Delfino,Giampiero Mele,Tullia Norando,2019-10-08 The volume reports on interdisciplinary discussions and interactions between theoretical research and practical studies on geometric structures and their applications in architecture the arts design education engineering and mathematics These related fields of research can enrich each other and renew their mutual interest in these topics through networks of shared inspiration and can ultimately enhance the quality of geometry and graphics education Particular attention is dedicated to the contributions that women have made to the scientific community and especially mathematics The book introduces engineers architects and designers interested in computer applications graphics and geometry to the latest advances in the field with a particular focus on science the arts and mathematics education Math through the Ages: A Gentle History for Teachers and Others Expanded Second Edition William P. Berlinghoff,Fernando Q. Gouvêa,2021-04-29 Where did math come from Who thought up all those algebra symbols and why What is the story behind negative numbers the metric system quadratic equations sine and cosine logs The 30 independent historical sketches in Math through the Ages answer these questions and many others in an informal easygoing style that is accessible to teachers students and anyone who is curious about the history of mathematical ideas Each sketch includes Questions and Projects to help you learn more about its topic and to see how the main ideas fit into the bigger

picture of history The 30 short stories are preceded by a 58 page bird s eye overview of the entire panorama of mathematical history a whirlwind tour of the most important people events and trends that shaped the mathematics we know today What to Read Next and reading suggestions after each sketch provide starting points for readers who want to learn more This book is ideal for a broad spectrum of audiences including students in history of mathematics courses at the late high school or early college level pre service and in service teachers and anyone who just wants to know a little more about the origins of mathematics   **The House of Wisdom** Jonathan Lyons,2011-02-05 For centuries following the fall of Rome western Europe was a benighted backwater a world of subsistence farming minimal literacy and violent conflict Meanwhile Arab culture was thriving dazzling those Europeans fortunate enough to catch even a glimpse of the scientific advances coming from Baghdad Antioch or the cities of Persia Central Asia and Muslim Spain T here philosophers mathematicians and astronomers were steadily advancing the frontiers of knowledge and revitalizing the works of Plato and Aristotle I n the royal library of Baghdad known as the House of Wisdom an army of scholars worked at the behest of the Abbasid caliphs At a time when the best book collections in Europe held several dozen volumes the House of Wisdom boasted as many as four hundred thousand Even while their countrymen waged bloody Crusades against Muslims a handful of intrepid Christian scholars thirsty for knowledge traveled to Arab lands and returned with priceless jewels of science medicine and philosophy that laid the foundation for the Renaissance I n this brilliant evocative book Lyons shows just how much Western culture owes to the glories of medieval Arab civilization and reveals the untold story of how Europe drank from the well of Muslim learning   **The Britannica Guide to Geometry** Britannica Educational Publishing,2010-04-01 More than a study of shapes and angles geometry reflects an amalgamation of discoveries over time This book not only provides readers with a comprehensive understanding of geometric shapes axioms and formulas it presents the field s brilliant minds from Euclid to Wendelin Werner and many in between whose works reflect a progression of mathematical thought throughout the centuries and have helped produce the various branches of geometry as they are known today Detailed diagrams illustrate various concepts and help make geometry accessible to all   A Brief History of Numbers Leo Corry,2015-08-27 The world around us is saturated with numbers They are a fundamental pillar of our modern society and accepted and used with hardly a second thought But how did this state of affairs come to be In this book Leo Corry tells the story behind the idea of number from the early days of the Pythagoreans up until the turn of the twentieth century He presents an overview of how numbers were handled and conceived in classical Greek mathematics in the mathematics of Islam in European mathematics of the middle ages and the Renaissance during the scientific revolution all the way through to the mathematics of the 18th to the early 20th century Focusing on both foundational debates and practical use numbers and showing how the story of numbers is intimately linked to that of the idea of equation this book provides a valuable insight to numbers for undergraduate students teachers engineers professional mathematicians and anyone with an interest in the history of mathematics   *Encyclopaedia of the*

History of Science, Technology, and Medicine in Non-Westen Cultures Helaine Selin,2013-11-11 The Encyclopaedia fills a gap in both the history of science and in cultural stud ies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a trans lator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western aca demic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa

Science and Islam Muzaffar Iqbal,2007-03-30 Science and Islam provides a detailed account of the relationship between Islam and science from the emergence of the Islamic scientific tradition in the eighth century to the present time This relationship has gone through three distinct phases The first phase began with the emergence of science in the Islamic civilization in the eighth century and ended with the rise of modern science in the West the second period is characterized by the arrival of modern science in the Muslim world most of which at that time was under colonial occupation and the third period which began around 1950 is characterized by a more mature approach to the major questions that modern science has posed for all religious traditions Based on primary sources the book presents a panorama of Islamic views on some of the major issues in the current science and religion discourse Written in accessible language Science and Islam is an authentic account of the multi faceted and complex issues that arise at the interface of Islamic intellectual tradition and science Rich in historical details the book is a fascinating survey of the interaction of Islamic beliefs with the enterprise of science

Geometric Constructions George E. Martin,2012-12-06 Geometric constructions have been a popular part of mathematics throughout history The ancient Greeks made the subject an art which was enriched by the medieval Arabs but which required the algebra of the Renaissance for a thorough understanding Through coordinate geometry various geometric construction tools can be associated with various fields of real numbers This book is about these associations As specified by Plato the game is played with a ruler and compass The first chapter is informal and starts from scratch introducing all the geometric constructions from high school that have been forgotten or were never seen The second chapter formalizes Plato s game and examines problems from antiquity such as the impossibility of trisecting an arbitrary angle After that variations on Plato s theme are explored using only a ruler using only a compass using toothpicks using a ruler and dividers using a

marked rule using a tomahawk and ending with a chapter on geometric constructions by paperfolding The author writes in a charming style and nicely intersperses history and philosophy within the mathematics He hopes that readers will learn a little geometry and a little algebra while enjoying the effort This is as much an algebra book as it is a geometry book Since all the algebra and all the geometry that are needed is developed within the text very little mathematical background is required to read this book This text has been class tested for several semesters with a master s level class for secondary teachers

Medieval Science, Technology, and Medicine Thomas F. Glick,Steven Livesey,Faith Wallis,2014-01-27 Medieval Science Technology and Medicine details the whole scope of scientific knowledge in the medieval period in more than 300 A to Z entries This resource discusses the research application of knowledge cultural and technology exchanges experimentation and achievements in the many disciplines related to science and technology Coverage includes inventions discoveries concepts places and fields of study regions and significant contributors to various fields of science There are also entries on South Central and East Asian science This reference work provides an examination of medieval scientific tradition as well as an appreciation for the relationship between medieval science and the traditions it supplanted and those that replaced it For a full list of entries contributors and more visit the Routledge Encyclopedias of the Middle Ages website

Taming the Unknown Victor J. Katz,Karen Hunger Parshall,2020-04-07 What is algebra For some it is an abstract language of x s and y s For mathematics majors and professional mathematicians it is a world of axiomatically defined constructs like groups rings and fields Taming the Unknown considers how these two seemingly different types of algebra evolved and how they relate Victor Katz and Karen Parshall explore the history of algebra from its roots in the ancient civilizations of Egypt Mesopotamia Greece China and India through its development in the medieval Islamic world and medieval and early modern Europe to its modern form in the early twentieth century Defining algebra originally as a collection of techniques for determining unknowns the authors trace the development of these techniques from geometric beginnings in ancient Egypt and Mesopotamia and classical Greece They show how similar problems were tackled in Alexandrian Greece in China and in India then look at how medieval Islamic scholars shifted to an algorithmic stage which was further developed by medieval and early modern European mathematicians With the introduction of a flexible and operative symbolism in the sixteenth and seventeenth centuries algebra entered into a dynamic period characterized by the analytic geometry that could evaluate curves represented by equations in two variables thereby solving problems in the physics of motion This new symbolism freed mathematicians to study equations of degrees higher than two and three ultimately leading to the present abstract era Taming the Unknown follows algebra s remarkable growth through different epochs around the globe
