Epstein-Barr Virus and Human Disease • 1988 D. V. Ablashi, A. Faggioni, G. R. F. Krueger, J. S. Pagano, G. R. Pearson, 2012-12-06 Epstein Barr virus EBV is one of the most widespread human viruses with over 80% of the general population exposed by young adulthood as determined by antibody studies Initial infection usually occurs during childhood or the teenage years It is clear that depending on the age of the recipient clinical manifestations of the primary infection can vary It has been known for 20 years that EBV is the etiologic agent of acute infectious mononucleosis IM and is also closely associated with African Burkitt's lymphoma BL and nasopharyngeal carcinoma NPC There is increasing evidence that EBV is a factor in the etiology of B cell lymphomas which arise at a high frequency in immunodeficient populations EBV may also contribute to the development of autoimmune disease Thus this virus continues to attract world wide attention The major target cell for EBV infection has now been conclusively identified as the complement receptor type 2 CR2 the CD21/35 receptor on B lymphocyte It is apparent however that other cells also can become infected by EBV such as epithelial cells in the parotid gland and other epithelial cells in the upper respiratory tract This might help account for the EBV associated carcinomas of the upper respiratory tract The first in a series of international symposia on EBV associated diseases focused primarily on Burkitt's type lymphomas or on NPC Kyoto 1977 Dusseldorf 1980 Kuala Lumpur 1982 and emphasized mainly the clinical elements of these diseases Subsequent symposia Loutraki 1984 St. Louis 1986 *Epstein-Barr Virus and Human Disease* • 1990 D. V. Ablashi, A. T. Huang, J. S. Pagano, G. R. Pearson, C. S. Yang, 2012-12-06 The Epstein Barr virus EBV isolated in 1966 continues to draw worldwide attention as an important human pathogen Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease manifestations observed following viral infection It is hoped that by thorough investigation of this virus clues to how cancer develops from a normal cell will surface In addition many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individuals with EBV associated diseases Thus studies on this virus continue to provide new information of importance to our understanding of the malignant process In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals a series of international symposia was initiated in 1984 The first meeting was held in Loutraki Greece and was attended by approximately 100 participants The second international symposium was held in St Petersburg Florida in 1986 and was attended by approximately twice as many participants as attended the Loutraki meeting National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1982 Current Catalog National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965-70 Neoplastic Transformation in Human Cell Culture John S. Rhim, Anatoly Dritschilo, 2012-12-06 The role of carcinogenic agents in the development of

human cancers is now being defined using a variety of human cells as experimental model systems A workshop on neoplastic transformation in human cell systems in vitro mechanisms of carcinogenesis was held at the Georgetown University Medical Center Washington DC on April 25-26 1991 The aims of the workshop were to present the state of the art in the transformation of human cells in culture as well as to provide insight into the molecular and cellular changes involved in the conversion of normal cells to a neoplastic state of growth The following topics were closely related to the theme of the workshops 1 Derivation of in vitro model systems epithelial fibroblastic and hematopoietic 2 Factors modulating cellular transformation 3 Usefulness of defined in vitro model systems for viral chemical and radiation carcinogenesis 4 Multistep nature of human cell carcinogenesis 5 Role of activated and suppressor oncogenes in neoplastic transformation The workshop was organized by J S Rhim and A Dritschilo cochairmen G Jay J Little M McCormick R Tennant and R R Weischelbaum There were 32 speakers 30 poster presentations and about 190 participants

Lactoferrin T. William Hutchens, Bo Lönnerdal, 2012-12-06 The number of investigators focusing their attention on lactoferrin has increased dramatically in recent years Lactoferrin is a protein with more than one known structure and a number of proposed biological functions including several with important regulatory consequences In many ways it has been an easy protein to investigate however there have been difficulties understanding specific structure function relationships particularly as it functions in vivo Research funding dedicated to this protein has previously been limited but is now increasing As lactoferrin begins to emerge formally as a protein of significance to the media and industry it is more important than ever to coordinate and integrate research efforts whenever possible and to share the results of these efforts within the expanding array of medical and scientific disciplines involved It was our intention to provide a forum to summarize and disseminate the most recent advances in this field Included in *Lactoferrin Interactions and Biological Functions* are selected presentations representing the many disciplines involved in defining lactoferrin function in terms of its known structural features including its carbohydrate side chains receptor binding sites its capacity to bind different metal ions and other newly discovered bioactive domains Several of the possible physiological functions of lactoferrin are described and summarized in detail including the role of lactoferrin in bacterial killing its involvement in cell growth and proliferation in the modulation of immune function and in iron absorption *Proceedings of the Society for Experimental Biology and Medicine* Society for Experimental Biology and Medicine (New York, N.Y.), 1994 List of members in each volume

Handbook of Human Stress and Immunity Ronald Glaser, Janice K. Kiecolt-Glaser, 2014-06-28 In 1964 George Solomon coined the term psychoneuroimmunology In the intervening 30 years this term has emerged into a dynamic field of study which investigates the unique interactions between the nervous endocrine and immune systems The *Handbook of Human Stress and Immunity* is a comprehensive reference for this dynamic new field Focusing on how stressors impact the central nervous system and the resulting changes in immune responses the *Handbook* is the first to describe how stress specifically

affects human immune systems It discusses how stress generally makes people more susceptible to infection how personal support systems can counteract the physiological effects of stress and how stress or lack of stress affects the aging process Chapters are authored by the leading names in the field and cover such diseases as autoimmune disease viral pathogenesis herpes HIV and AIDS

Experimental Biology and Medicine, 2001 **The Resistance Arteries** William Halpern, John A. Bevan, Joseph Brayden, Harriet Dustan, Mark Nelson, George Osol, 2013-06-29 *Chronic Diseases* Marvin Stein, Andrew S. Baum, Andrew S. Baum, 2013-05-13

Although considerable progress has been made in the understanding and treatment of a range of medical disorders it had recently been pointed out that 85 percent of the population will be stricken by chronic disorders which may be accompanied by many years of suffering This volume deals with issues of both cure and risk in chronic illnesses which are among the group of disorders associated with the leading causes of death in the United States at this time Alzheimer's disease AIDS and cancer A consideration of the role of brain and behavior in relation to the cure and prevention of these disorders is the central focus of the various chapters in this book Several chapters discuss the neuropsychological aspects of chronic illnesses including the underlying pathophysiology of changes in the brain which may be associated with both behavioral and physical signs and symptoms in these disorders Considerable evidence suggests that a range of psychosocial or behavioral factors such as stressful life events and depression are associated with increased morbidity or mortality Complex neurobiological pathways involving the brain neurotransmitter and neuroendocrine systems have been implicated Other chapters consider some of the links among brain behavior and chronic illnesses as well as psychological factors such as coping and depression in relation to chronic disorders The three leading risk factors known to be associated with both chronic illnesses and death diet tobacco and alcohol are all related to behavioral choices Sexual behavior can be added to the list in terms of HIV infection and acquired immunodeficiency disease AIDS Several chapters deal specifically with a consideration of sexual behavior and HIV infection which clearly highlight the need for scientific knowledge in human sexuality if effective long term preventive measures are to be developed while waiting for a vaccine or cure The search for cures must continue to have the highest priority in the scientific and clinical struggle against disease Nonetheless the value of psychosocial interventions on the quality of life and mental states of seriously ill persons should not be underestimated

The Tohoku Journal of Experimental Medicine, 1993 *Nutrients and Cancer Prevention* Kedar N. Prasad, Frank L. Meyskens Jr., 2012-12-06

During the last 10 years the role of specific nutrients in cancer prevention and cancer treatment has been the subject of intense basic preclinical and clinical research At present the major focus of nutritional oncology is on the mechanisms of carcinogenesis and their modification by nutrients and on cancer prevention studies in animals and humans Some human epidemiological studies have confirmed the hypothesis developed on animals that there is an inverse relationship between the intake and or level of β -carotene vitamin A vitamin E or vitamin C and the risk of cancer whereas others have shown no such relationship This is not unexpected since the protective effect of individual

nutrients may be too small to be detected by epidemiological methodologies in which a single vitamin or mineral is considered as one variable. Conclusive evidence regarding the role of nutrients in human cancer prevention will come from a well designed human intervention study using one or more nutrients in a population that has a high risk of developing cancer. The involvement of specific nutrients in the regulation of protooncogene expression has just begun. Also some of the results of human intervention trials are beginning to yield interesting results. A large number of international scientists from various disciplines including cell biology, molecular biology, nutritional oncology, epidemiology and public health reviewed and discussed their most recent findings. The following topics were emphasized: 1 Mechanisms of carcinogenesis 2 Nutrients in Cancer Prevention and Treatment Kedar N. Prasad, Leonida Santamaria, R. Michael Williams, 2012-12-06. Nutrients in Cancer Prevention and Treatment contains articles that were presented by leading researchers and physicians in the field of nutritional oncology. Most of the previous conference proceedings on Nutrition and Cancer have dealt primarily with the issue of the role of nutrients in cancer prevention. This is logical because enormous quantities of laboratory and epidemiologic data have been published on the topic. Nutrients in Cancer Prevention and Treatment also contains several studies on the role of diet and vitamins in cancer treatment. There are very few books that have reviewed laboratory and clinical studies and the role of vitamins in cancer treatment. There are preliminary data suggesting that daily supplementation with high doses of certain vitamins in combination with conventional therapeutic agents may enhance their growth inhibitory effects on tumor cells and may protect normal tissues against some of their toxic effects. This book is unique in the sense that several articles have discussed the mechanisms of action of individual vitamins on cellular and molecular parameters. It is very exciting to note that some of the vitamins inhibit protein kinase C activity, increase the production of certain growth factors and modulate the expression of a number of oncogenes. These studies at least in part offer rationales for the cancer protective effects of vitamins. Soy in Health and Disease Prevention Michihiro Sugano, 2005-08-29. While the western world has only recently become enamored with the soybean, East Asia has been consuming and enjoying the associated health benefits of this versatile proteinaceous legume for centuries. The Japanese in particular have devoted much energy to unraveling the mysteries and revealing the science of this oil rich bean. The Fuji Foundation **Immunological Recognition of Peptides in Medicine and Biology** N. D. Zegers, W.J.A. Boersma, Eric Claassen, 1995-07-19. Immunological Recognition of Peptides in Medicine and Biology gives a state of the art overview on the use of peptides and peptide ligand interactions and the critical role they play in recognition patterns for the regulation of various biological functions. A wide range of applications are discussed including some experimental preclinical ones such as epitope mapping, peptide libraries and production of amino acid specific antibodies and their therapeutic use in oncology and infectious disease vaccines. Each chapter also includes step by step protocols to aid in actual experiments. Several alternative techniques and strategies are discussed by different authors offering the reader an opportunity to select the most favorable application for a specific
