**Sustainable Resilient Built Environments** Rama Devi Nandineni, Susan Ang, Norwina Binti Mohd Nawawi, 2024-07-05 The proceedings of Sustainable Resilient Built Environments are based on the SRBE 2022 conference held in December 2022 It focuses on the advances under the overarching theme of Sustainability The concept of Sustainability has been conventionally defined as meeting the needs of the present without compromising the ability of future generations to meet their own needs In scientific literature sustainable development has been analysed using different qualitative approaches such as economic social ecological cultural institutional ethical and political In this edited volume the concepts of both sustainability and resilience are considered to open up useful pathways towards achieving sustainable buildings and infrastructure Though the concepts of sustainability and resilience are considered to help improve the built environment the interrelations and interdependence between these two concepts are not clearly evident This has led to the questions such as Is the sustainable built environment always resilient Is the resilient built environment always sustainable What more is needed for sustainability In exploring

these pertinent questions the proposed edited volume is expected to unveil and disseminate new insights on the themes related to sustainable and resilient built environment The themes of the proceedings lay a platform for researchers and professionals to integrate the aspects including smart innovation technologies green energy efficiency carbon reduction sustainability and resilience with regard to buildings and other built infrastructure Specific objectives included as per the five themes are as follows Environment Design and Sustainability Sustainable Smart Buildings Community Resilience Social Sustainability Heritage and Sustainability Pandemic issues and sustainable development

management and other related fields      Case Studies in Parametric Design Jeffrey Collins, 2023-09-28 Case Studies in Parametric Design is a guide to scripting digital models for architects, designers and builders. The use of parametric design in architecture has afforded the realization of incredible built work. Modelling software can resolve complex geometry and aid in the development of stunning creations. Methods for creating the digital models to achieve these results, however, can be perplexing. Learning curves are steep and benefits garnered from adapting existing workflows to incorporate new tools may appear trivial. This book describes programming techniques for a variety of buildings and provides novices an understanding of language and processes, challenges intermediate users with rigor and intentionality, and offers proficient practitioners objectives beyond novel form making. The case studies consist of six mass topologies and six facade topologies; each includes sample topology models and scripts, descriptions of steps for generating customizable parametric models, and suggestions for additional modelling inquiries. This is essential reading for students and practitioners interested in harnessing the full potential of parametric design.

*Wood* Joachim Radkau, 2013-12-23 The iceman could not do without wood when he was climbing his Alpine glacier, nor could medieval cathedral builders or today's construction companies. From time immemorial, the skill of the human hand has developed by working wood, so much so that we might say that the handling of wood is a basic element in the history of the human body. The fear of a future wood famine became a panic in the 18th century and sparked the beginnings of modern environmentalism. This book traces the cultural history of wood and offers a highly original account of the connection between the raw material and the human beings who benefit from it. Even more, it shows that wood can provide a key for a better understanding of history, of the peculiarities as well as the varieties of cultures, of a co-evolution of nature and culture, and even of the rise and fall of great powers. Beginning with Stone Age hunters, it follows the twists and turns of the story through the Middle Ages and the Industrial Revolution to the global society of the twenty-first century, in which wood is undergoing a varied and unexpected renaissance. Radkau is sceptical of claims that wood is about to disappear, arguing that such claims are self-serving arguments promoted by interest groups to secure cheaper access to and control over wood resources. The whole forest and timber industry often strikes the outsider as a world unto itself, a hermetically sealed black box, but when we lift the lid on this box, as Radkau does here, we will be surprised by what we find within. Wide-ranging and accessible, this rich historical analysis of one of our most cherished natural resources will find a wide readership.
