Error Propagation In Environmental Modelling With Gis:

Error Propagation in Environmental Modelling with GIS Gerard B.M. Heuvelink, 1998-03-03 GIS users and professionals are aware that the accuracy of GIS results cannot be naively based on the quality of the graphical output Data stored in a GIS will have been collected or measured classified generalised interpreted or estimated and in all cases this allows the introduction of errors With the processing of translation of this data into the GIS itself further propagation or amplification or errors also occur It is essential that GIS professionals understand these issues systematically if they are to build ever more accurate systems In this book the authors decade of study into these problems is brought into focus with an account of the development application and implementation of error propagation techniques for use in environmental modelling with GIS Its purpose is to provide a methodology for handling error and error propagation *Environmental Modelling in GIS* D. Karssenberg, 1996 GeoDynamics Peter Atkinson, Giles M. Foody, Steven E. Goodchild, 2002-09-05 As research in the geosciences and social sciences becomes increasingly dependent on computers applications such as geographical information systems are becoming indispensable tools But the digital representations of phenomena that these systems require are often of poor quality leading to inaccurate results uncertainty error propagation and Geographical Information Massimo Rumor, R. McMillan, Henk F. L. Ottens, 1996 Geographical Information is defined as the collection of data on real virtual objects which have a fixed place above on in or beneath the surface of the earth Geographical information involves all information on buildings roads pipelines cabling etc as well as boundaries air corridors topography and postcode areas the information can be administrative and geometric Changes in social and economic interests have caused the emphasis to shift over the years Virtual objects areas postcode areas in particular have attracted more interest in recent years This is closely related to the increased desirability of analysing and presenting policy information within certain spatial limits in which the introduction of Geographical Information Systems GIS and systems like GIS has played a significant role Geographical Information cannot be regarded as the informational side of

one policy area Geographical information is not only necessary for the layout and management of space but also for such things as taxation environmental policy water management maintenance and protection of pipeline systems and making maps The volumes address the latest developments with respect to technological innovation scientific progress and advanced professional application in the field of geographical information In addition articles dealing with the state of the art and coming innovations with respect to major fields of GI research and application are included The books cover the following areas of specific interest topics with the current scope of geographical information research geographical information technology geographical information and environment geographical information planning geographical information in urban and regional government geographical information in utilities telecom and private enterprise geographical information education and awareness geographical information in Spain
