Erythropoietin From Molecular Structure To Clinical Application:

Contributions to Nephrology, 1975 **Erythropoietin** C. A. Baldamus, 1989 *Dialysis Therapy in the 1990's* H. Tanaka, 1991-01-07 *Transplant International Official Journal of the European Society for Organ Transplantation* G. Opelz, W.A. Buurman, J.P. van Hooff, P. MacMaster, J. Wallwork, 2013-11-11 This supplement to *Transplant International* contains the Proceedings of the successful 5th Congress of the European Society for Organ Transplantation held in Maastricht from 7 to 10 October 1991. Of 827 abstracts submitted to the congress 548 were selected by the Scientific Committee for either oral or poster presentation. Of these 548 presentations the guest editors selected 212 full papers for publication in this book. Two aspects are important where proceedings are concerned: the quality of the papers and the speed of publication. I thank our authors and guest editors whose combined expertise has given us a guarantee of quality. I also thank our editorial and production teams for their tremendous efforts to hasten editing, proofreading, printing and publication. In particular, I would like to express my gratitude to Maurits Booster M.D. and Sylvia van Roosmalen for their assistance and support in seeing this supplement through to completion. As a concession to time, we have waived some of our stringent rules of style and limited our correspondence with authors by, for example, page proofs being reviewed and corrected in-house only. This enables us to publish two months earlier but has the disadvantage that, given the allotted time, we have not been able to ensure that each and every article has an abstract nor that every item has been dotted in the reference lists or in the addresses/institute affiliations of all the authors.

Protein Pharmacokinetics and Metabolism Bobbe L. Ferraiolo, Marjorie A. Mohler, Carol A. Gloff, 2013-06-29 Investigation of the pharmacokinetics and metabolism of human proteins has escalated over the last two decades because of the use of recombinant human proteins as therapeutic agents. In addition, the development and improvement of analytical techniques enabling the detection of minute quantities of proteins in biological matrices have aided this process. In assembling this volume, we sought to provide a state-of-the-art assessment of the pharmacokinetics and metabolism of protein therapeutics through complete reviews of selected examples. A comprehensive review of all protein therapeutics was not attempted; the majority of the therapeutic protein classes and crucial scientific issues have been addressed. However, therefore, we are confident that this volume will provide a useful reference for scientists in this field. The volume has been divided into two general parts. The first part, Chapters 1-3, is composed of general reviews of topics of importance in pharmacokinetic/metabolism studies of proteins: goals and analytical methodologies, effects of binding proteins, and effects of antibody induction, respectively. The second part, Chapters 4-8, consists of specific detailed reviews by therapeutic protein class: growth factors and hormones, cytokines, cardiovascular proteins, hematopoietic proteins, and antibodies, respectively. The editors are grateful to the contributors for the patience, personal sacrifice, and perseverance required to complete this volume.
