Enzymes and Their Role in Cereal Technology James E. Kruger, David R. Lineback, 1987-01-01 Some general aspects of enzyme chemistry Methods for the purification and separation of cereal enzymes and their multiple forms Enzyme structural genes and their exploitation in wheat genetics and breeding Physiological aspects of enzymes during grain development and germination Carbohydrate degrading enzymes in cereals Amylases Inhibitors Proteases peptidases and inhibitors Oxidases Ester hydrolases Role of enzymes in baking The effect of enzymes on pasta and noodle products Enzymes in the preparation of beer and fuel alcohol Enzymes in the industrial utilization of cereals      Enzymes in Food Processing Gregory A. Tucker, L.F.J. Woods, 2012-12-06 Recent years have seen a rapid increase in the use of enzymes as food processing tools as an understanding of their means of control has improved Since publication of the first edition of this book many new products have been commercially produced and the corresponding number of published papers has swollen This second edition has been fully revised and updated to cover changes in the last five years It continues to provide food technologists chemists biochemists and microbiologists with an authoritative practical and detailed review of the subject      **Enzymes and their role in cereal technology** James E. Kruger, 1987      **The Chemistry of Cereal Proteins** Radomir Lasztity, 2017-07-12 In the past decade since the first edition was published the study of cereal protein chemistry has grown and changed New separation techniques have been introduced while the application of achievements of molecular biology and genetic engineering of proteins has progressed dramatically This new edition includes these advances and updates the chemistry of cereal proteins for all specialists working in theory and practice of cereal grain production and processing      *Handbook of Cereal Science and Technology, Revised and Expanded* Karel Kulp, 2000-03-28 This thoroughly revised second edition addresses the full spectrum of cereal grain science employing agronomic chemical and technological perspectives and providing new and expanded treatment of food enrichment techniques nutritional standards and product quality evaluation Written by over 40 internationally respected authorities the      Enzymes and Their Role in Wheat Technology John Ansel Anderson, 1946      **Enzymes in Food Processing** Tilak Nagodawithana, Gerald Reed, 2013-10-22 In the past 35 years the use of commercial enzymes has grown from an insignificant role in the food industry to an important aspect of food processing This Third Edition of *Enzymes in Food Processing* explores recent and extensive changes in the use of enzymes as well as the discovery of new enzymes and their uses Included in the book is a history of the role of enzymes in food processing enzyme characterization a discussion of different classes of enzymes including lipases and proteases commercial enzyme production and the processing of particular foods such as meat vegetables fruit baked goods milk products and beer Unlike earlier editions it provides basic information on enzymes and their uses not adequately described in the current literature Food technologists will find in this edition a description of the properties of those enzymes that are important in food processing as well as a description of the properties of those enzymes that are important in food processing as well as a

description of the many applications of enzymes in the foods processing industry The book is intended for food technologists and will be of value to the microbiologist and enzyme chemist as well This treatise provides a comprehensive treatment of enzymes used in food processing Covers genetic modification of enzymes in the food industry Discuss enzyme function and dependence on environmental parameters Explores practical applications of food enzymes in industry *The Complete Book of Enzyme Therapy* Anthony J. Cichoke,1999 Describes a variety of ailments and medical conditions and lists and current treatments that feature enzymes vitamins and minerals *Food Biochemistry and Food Processing* Y. H. Hui,Wai-Kit Nip,Leo M. L. Nollet,Gopinadhan Paliyath,Benjamin K. Simpson,2008-02-15 The biochemistry of food is the foundation on which the research and development advances in food biotechnology are built In *Food Biochemistry and Food Processing* lead editor Y H Hui has assembled over fifty acclaimed academicians and industry professionals to create this indispensable reference and text on food biochemistry and the ever increasing development in the biotechnology of food processing While biochemistry may be covered in a chapter or two in standard reference books on the chemistry enzymes or fermentation of food and may be addressed in greater depth by commodity specific texts e g the biotechnology of meat seafood or cereal books on the general coverage of food biochemistry are not so common *Food Biochemistry and Food Processing* effectively fills this void Beginning with sections on the essential principles of food biochemistry enzymology and food processing the book then takes the reader on commodity by commodity discussions of biochemistry of raw materials and product processing Later sections address the biochemistry and processing aspects of food fermentation microbiology and food safety As an invaluable reference tool or as a state of the industry text *Food Biochemistry and Food Processing* fully develops and explains the biochemical aspects of food processing for scientist and student alike *Enzyme Mixtures and Complex Biosynthesis* Sanjoy K. Bhattacharya,2007-10-29 In this book an ensemble of examples is provided to illustrate the diversity of approaches and applications to which the multi enzyme catalysis is currently applied Enzymes act in living beings as extremely complex network mixtures that are supportive of all the biochemical transformations on which the life is based In the biotechnological context many of the enzymatic processes performed in vitro at both small and industrial scales lie on the enzymatic transformation of a single molecular species for the generation of a product and as catalyzed by a single enzyme However the number of technological applications for which cell free enzyme mixtures are required is increasing and the science of how to combine individual reactions in complex processes is under speedy development Obviously any of the current in progress multi enzyme processes is fully mimicking the complexity of a living cell or cell community However the refined combination of selected enzymes and substrates is offering a new technological approach that is supporting the development of new or improved products in many fields such as food leather and pharmaceutical industries This book is unique and presents selective examples of each of these processes have been incorporated in this book by experts in their respective areas

*Handbook of Applied Mycology* Arora,1991-08-02 This volume supplements the other books on this subject by providing

much information that is not readily available elsewhere It opens with a taxonomy of fungi in foods and feeds and then considers ecology spoilage and mycotoxin production by fungi in foods and feeds This is followed by a series     **Functional Additives for Bakery Foods** Clyde E. Stauffer,1990 Abstract This publication is a detailed reference source which surveys the functions and applications of additives used in baked foods at relatively low levels Written for a wide range of bakery professionals the text explains how each class of additives functions and relates the action of each additive to the ultimate purpose of the baker making high quality baked products The additives discussed in this volume include oxidants reductants emulsifiers and surfactants enzymes chemical leavenings yeast vital wheat gluten and gums     Biogas and Alcohols from Biomass Jean A. dough aeration and rheology the use of redox agents and enzymes in breadmaking and water control among other topics In part three the focus shifts to bread sensory quality shelf life and safety Topics covered include bread aroma staling and contamination Finally part four looks at particular bread products such as high fiber breads those made from partially baked and frozen dough and those made from non wheat flours With its distinguished editor and international team of contributors Bread Making Improving Quality Third Edition continues to serve as the standard reference for researchers and professionals in the bread industry and all those involved in academic research on breadmaking science and practice Discusses dough development and bread ingredients with new chapters on flour lipids and improving the nutrition and dietary quality of breads Comprehensively updated and revised coverage outlines the latest developments in breadmaking science and practice Covers topics such as wheat chemistry wheat starch structure grain quality assessment milling and wheat breeding

**Cereal Grain Quality** R. Henry, P. Kettlewell, 2012-12-06 Cereals range from human food and beverages to animal feeds and industrial products It is human food and beverages which are the predominant uses covered in this book since the nutritional quality of cereals for animal feed is described in other publications on animal nutrition and industrial products are a relatively minor use of cereals Cereals are the main components of human diets and are crucial to human survival Three species wheat rice and maize account for the bulk of human food Barley is the major raw material for beer production and ranks fourth in world production Other species such as sorghum are regionally important This book covers all the major cereal species wheat rice maize barley sorghum millet oats rye and triticale Specific chapters have been devoted to a description of the major end uses of each of the species and to definition of the qualities required for each of their end uses The functional and nutritional quality of cereals determines their suitability for specific purposes and may limit the quality of the end product influencing greatly the commercial value of grain An understanding of the factors that determine grain quality is thus important in the maintenance of efficient and sustainable agricultural and food production The biochemical constituents of the grain that determine quality have been described in chapters on proteins carbohydrates and other components An understanding of the relationships between grain composition and quality is important in selecting grain for specific uses

**Baked Goods Freshness** Ronald Hebeda, 1996-04-30 This work offers comprehensive coverage of the staling process that occurs upon ageing in baked goods It covers in detail the technologies for maintaining freshness including the use of crumb softeners enzymes packaging and preservatives and models the theory of staling on the basis of molecular configuration The work presents current methods for determining the degree of staling by instrumental and organoleptic testing addresses regulatory and labelling requirements for antistaling ingredients and more
