Eocene-Oligocene Climatic and Biotic Evolution Donald R. Prothero, William A. Berggren, 2014-07-14 The transition from the Eocene to the Oligocene epochs was the most significant event in earth history since the extinction of dinosaurs As the first Antarctic ice sheets appeared major extinctions and faunal turnovers took place on the land and in the sea eliminating forms adapted to a tropical world and replacing them with the ancestors of most of our modern animal and plant life Through a detailed study of climatic conditions and of organisms buried in Eocene Oligocene sediments this volume shows that the separation of Antarctica from Australia was a critical factor in changing oceanic circulation and ultimately world climate In this book forty eight leading scientists examine the full range of Eocene and Oligocene phenomena Their articles cover nearly every major group of organisms in the ocean and on land and include evidence from paleontology stable isotopes sedimentology seismology and computer climatic modeling The volume concludes with an update of the geochronologic framework of the late Paleogene Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **Paleontology of the Upper**

Eocene Florissant Formation, Colorado Herbert William Meyer, Dena M. Smith, 2008 The Florissant formation's fossil beds and petrified forest are interesting in themselves but also shed light on questions of paleoecology macroevolution and taphonomy the study of the process of fossilization Meyer National Park Service Florissant Fossil Beds National Monument Colorado and Smith U of Colorado Museum of Natural History Paleontology geological sciences UC Boulder introduce 11 papers examining Florissant fossil flora fauna mineralogy and geochemistry through different periods and via a model of the role of microbial mats in its preservation An integrated database Web site to further related research is also discussed The monograph is well illustrated with geologic maps and images of historical figures in the field and specimens but is not indexed

Vertebrate Paleontology in Utah David D. Gillette, 1999 The 52 papers in this vary in content from summaries or state of knowledge treatments to detailed contributions that describe new species Although the distinction is subtle the title *Vertebrate Paleontology in Utah* indicates the science of paleontology in the state of Utah rather than the even more ambitious intent if it were given the title *Vertebrate Paleontology of Utah* which would promise an encyclopedic treatment of the subject The science of vertebrate paleontology in Utah is robust and intense It has grown prodigiously in the past decade and promises to continue to grow indefinitely This research benefits everyone in the state through Utah's museums and educational institutions which are the direct beneficiaries **Late Paleocene-early Eocene Climatic and Biotic Events**

in the Marine and Terrestrial Records Marie-Pierre Aubry, Spencer G. Lucas, William A. Berggren, 1998 This book is a

comprehensive collection of the best scholarship available on the transition between the Paleocene and Eocene epochs when the earth experienced the warmest climatic episode of the Cenozoic era These 21 contributions detail the major turnover among marine and terrestrial organisms that resulted from sudden global warming From Greenhouse to Icehouse Donald R. Prothero, Linda C. Ivany, Elizabeth A. Nesbitt, 2003 The marine Eocene Oligocene transition of 34 million years ago was a critical turning point in Earth's climatic history when the warm high diversity greenhouse world of the early Eocene ceded to the glacial icehouse conditions of the early Oligocene This book surveys the advances in stratigraphic and paleontological research and isotopic analysis made since 1989 in regard to marine deposits around the world In particular it summarizes the high resolution details of the so called doubthouse interval roughly 45 to 34 million years ago which is critical to testing climatic and evolutionary hypotheses about the Eocene deterioration The authors goals are to discuss the latest information concerning climatic and oceanographic change associated with this transition and to examine geographic and taxonomic patterns in biotic turnover that provide clues about where when and how fast these environmental changes happened They address a range of topics including the tectonic and paleogeographic setting of the Paleogene specific issues related to the stratigraphy of shelf deposits advances in recognizing and correlating boundary sections trends in the expression of climate change and patterns of faunal and floral turnover In the process they produce a valuable synthesis of patterns of change by latitude and environment Journal of Vertebrate Paleontology, 2004 **Anthropoid Origins** John G Fleagle, Richard F. Kay, 2013-11-11 This volume brings together information about recent discoveries and current theories concerning the origin and early evolution of anthropoid primates monkeys apes and humans Although Anthroidea is one of the most distinctive groups of living primates and the origin of the group is a frequent topic of discussion in the anthropological and paleontological literature the topic of anthropoid origins has rarely been the focus of direct discussion in primate evolution Rather discussion of anthropoid origins appears as a major side issue in volumes dealing with the origin of platyrrhines Ciochon and Chiarelli 1980 in discussions about the phylogenetic position of Tarsius in descriptions of early anthropoid fossils and in descriptions and revisions of various fossil prosimians As a result the literature on anthropoid origins has a long history of argument by advocacy in which scholars with different views have expounded individual theories based on a small bit of evidence at hand often with little consideration of alternative views and other types of evidence that have been used in their support This type of scholarship struck us as a relatively unproductive approach to a critical issue in primate evolution

The Sea Floor Eugen Seibold, Wolfgang H. Berger, 1996-02-06 The Sea Floor deals with the most important results achieved in Marine Geology over the last three decades Relevant geophysical geochemical sedimentological and paleontological methods are shortly described They should allow the reader to comment on new results about plate tectonics marine sedimentation from the coasts to the deep sea climatological aspects paleoceanology and the use of the sea floor The text tries to transmit to the reader the excitement of marine geological research both aboard and in modern laboratories

Basic mineralogical geochemical biological and other relevant data and a detailed list of books and symposia are given in an Appendix The third corrected and revised edition contains an enlarged and updated list of references and some new figures

Nearshore Marine Paleoclimatic Regions, Increasing Zoogeographic Provinciality, Molluscan Extinctions, and Paleoshorelines, California Clarence A. Hall, 2002 Approximately 3000 middle and late Cenozoic nearshore marine molluscan taxa from western California are assigned to six time periods spanning 25 m y In this interdisciplinary study western California is palinspastically restored for each of the time periods by backsliding and back rotating large fault blocks or crustal units Marine fossil assemblages are assigned to nearshore paleoclimatic regions or water masses within palinspastically restored California In addition this volume reveals positive feedback mechanisms between paleolatitudinal changes in sea surface paleotemperature gradients and changes in the diversity of marine mollusks along the California coast through time defines equable based effective temperatures and analyzes extinction rates among macroinvertebrate marine taxa from coastal California and the possible causes of these extinctions The late Paleogene to Neogene faunas reflect an increase in faunal diversity related to strengthened temperature gradients greater extremes in sea surface temperatures reduction in temperateness and the development of an embayed California coastline **Encyclopedia of Paleontology**

Ronald Singer, 2019-06-04 The Encyclopedia of Paleontology is designed to address the shortage of general reference works on both vertebrate and invertebrate paleontology and to serve the needs of students and lay persons interested in the field As the encyclopedia aims to provide basic information the majority of the 350 entries are devoted to explanations of paleontological concepts and techniques examinations of the evolutionary development of particular organisms and biological features profiles of major discoveries and biographies of leading scientists Each entry includes an essay and a further reading list An international team of 200 leading experts in the field has prepared the illustrations and the essays which range from concise descriptions to comprehensive discussions Eocene Geologic History Patrick L.
