introduces the reader to methodological aspects of epidemiology that are specific for infectious diseases and provides insight into the epidemiology of some classes of infectious diseases characterized by their main modes of transmission This choice of topics bridges the gap between scientific research on the clinical biological mathematical social and economic aspects of infectious diseases and their applications in public health The book will help the reader to understand the impact of infectious diseases on modern society and the instruments that policy makers have at their disposal to deal with these challenges It is written for students of the health sciences both of curative medicine and public health and for experts that are active in these and related domains and it may be of interest for the educated layman since the technical level is kept relatively low

Anthropology and Epidemiology C. Janes, R. Stall, S.M. Gifford, 2012-12-06 Over the past two decades increasing interest has emerged in the contributions that the social sciences might make to the epidemiological study of patterns of health and disease Several reasons can be cited for this increasing interest Primary among these has been the rise of the chronic non infectious diseases as important causes of morbidity and mortality within Western populations during the 20th century Generally speaking the chronic non infectious diseases are strongly influenced by lifestyle variables which are themselves strongly influenced by social and cultural forces The understanding of the effects of the behavioral factors in say hypertension thus requires an understanding of the social and cultural factors which encourage obesity a sedentary lifestyle non compliance with anti hypertensive medications or other prescribed regimens and stress Equally there is a growing awareness that considerations of human behavior and its social and cultural determinants are important for understanding the distribution and control of infectious diseases Related to this expansion of epidemiologic interest into the behavioral realm has been the development of etiological models which focus on the psychological biological and socio cultural characteristics of hosts rather than exclusive concern with exposure to a particular agent or even behavioral risk Also during this period advances in statistical and computing techniques have made accessible the ready testing of multivariate causal models and so have encouraged the measurement of the effects of social and cultural factors on disease occurrence
