Marc Dichter,2014-11-14 **Advances in Stereotactic and Functional Neurosurgery 8** Giovanni Broggi,Juan Burzaco,Edward R. Hitchcock,Björn A. Meyerson,Szabolcs Toth,2012-12-06 The last ten years has witnessed a resurgence of interest in stereotactic surgery although this has been mainly in the field of the comparatively simple stereotactic biopsy of intracranial tumours There is also evidence of a returning interest in functional neurosurgery other than pain which has always sustained high levels of endeavour The present work comprises selected papers from a much larger group of interesting and important communications to the European Society for Stereotactic and Functional Neurosurgery They represent modern views on a wide variety of stereotactic surgical topics from internationally acclaimed experts in this field The neurosurgeon who has little or no acquaintance with this fruitful sub specialty will be surprised to find very broad applications of the technique which is gradually replacing many conventional neurosurgical procedures This is particularly evident in the papers on tumours but there is also a section on the treatment of vascular disease which marks an extension of neurosurgical practice The Society has always regarded technical advances as important and some of the most recent developments appear in this book Finally an exciting new development of neural transplantation marks the beginning of what may be an important part of neurological surgery in the future The Treatment of Epilepsy Elaine Wyllie,Ajay Gupta,Deepak K. Lachhwani,2006 Serving as a reference on the epilepsies this fourth edition provides an overview of seizure disorders and contemporary treatment options It brings together the vital work in the neurosciences genetics electroencephalography pediatric and adult neurology neuropharmacology neurosurgery and psychiatry It also talks about epilepsy surgery

Imitators of Epilepsy Robert Fisher,Robert S. Fisher, MD,Peter W. Kaplan,2004-12-01 Many patients referred for an epilepsy evaluation actually suffer from one of many conditions that can imitate it Imitators of epilepsy are a diverse group that involve consideration of many areas of internal medicine neurology and psychiatry The most important imitators of epileptic seizures are dizziness vertigo syncope complicated migraine and somewhat less frequently sleep disorders transient cerebral ischemia paroxysmal movement disorders endocrine or metabolic dysfunction delirium psychiatric conditions or transient global amnesia Clearly under recognized are hyperventilation episodes panic attacks and other psychogenic and psychiatric paroxysmal disorders that may simulate epileptic seizures This volume provides a comprehensive review of the differential diagnosis of seizures how do the imitators of epilepsy present clinically what are their particular distinguishing historical features and what tests are helpful with diagnosis Expanding beyond the first edition this second edition is divided into four sections The first deals with an introduction and approach diagnosing spells the electroencephalography of epilepsy and its imitators and specialized tests of diagnosis such as measurement of serum prolactin There are chapters on epileptic seizures that do not look like typical epileptic seizures and conversely apparent epileptic seizures that are not A second section approaches imitators of epileptic seizures along age based lines i e what sorts of spells are likely to beset infants children or the elderly A third section addresses individual imitators of epilepsy ranging from the common to the rare from

dizziness and faintness to startle disease arranged according to whether they might simulate partial generalized or both types of epileptic seizures The volume finishes off with hyperventilation syndrome psychogenic seizures with or without epilepsy and panic disorders Most chapters review the basic definitions and physiology of the respective imitator followed by the clinical characteristics Emphasis is given to those features that may differentiate it from an epileptic event but also mark it for what it is and give possible criteria for an alternate diagnosis Case vignettes are used to illustrate particular aspects along with tables that compare and contrast phenotypically similar conditions Based on their extensive clinical experience the authors provide a personal perspective on diagnosis and treatment

Epilepsy Hans Lüders, Ronald P. Lesser, 2012-12-06 Epilepsy is among the most common scourges afflicting the health of humankind and perhaps the most terrifying In one form or another it is suffered by one in everyone hundred people on earth with a disproportionate prevalence at the early and late extremes of life There is nothing sacred or sanctifying about it in spite of Hippoc rates terming epilepsy The Sacred Disease in a famous treatise There is nothing ennobling about it despite its occasional designation as a noble disorder by virtue of its having affected the likes of Alexander of Macedon Julius Caesar and other persons of royal lineage From time to time epilepsy is hailed as a condition which is artistically inspirational Fyodor Dostoyevsky's dependence on his own personal experience with complex partial epilepsy as a source of imagery in the transfiguration scenes of The Brothers Karamazov and as a source of experience in The Idiot is often cited in this respect In fact for all its victims in human history epilepsy has been a sad burden which has disrupted and shortened life causing suffering and castigation for the duration of their terrestrial journey
